

SUMMARY

Python Developer with 3+ years of experience building backend services, secure APIs, and automated data workflows using Python, FastAPI, Flask, Django, and AWS. Improved system performance and reduced manual effort by creating reusable automation tools, optimizing data pipelines, and strengthening API reliability. Experienced in integrating ML models into production, supporting inference services, and developing GenAI features using LangChain, LLMs, and RAG workflows. Adept at working across cloud, data, and application layers to deliver scalable, maintainable, and high-quality solutions in Agile environments. Comfortable owning features end to end, from requirement analysis and design through implementation, testing, deployment, and production support.

TECHNICAL SKILLS

Programming & Scripting: Python (3.x), Java, JavaScript (ES6+/Node.js), SQL, Bash, HTML5, CSS3, C#
Frameworks & Libraries: FastAPI, Flask, Django, Django REST Framework, React.js, Bootstrap, Scikit-learn, TensorFlow, PyTorch, LangChain
Machine Learning & AI: Model Training & Evaluation, Feature Engineering, LLM Integration (OpenAI API, LangChain), Prompt Engineering, Generative AI, RAG, MLflow, Automated Data Pipelines
Data Engineering & Handling: PySpark, Apache Airflow, Data Modeling (Star/Snowflake), ETL/ELT Pipelines, Parquet/Avro, Pandas, NumPy, Matplotlib, SQLAlchemy, Data Warehousing (Snowflake/Redshift/BigQuery - familiarity)
Databases: PostgreSQL, MySQL, MongoDB, Database Design, SQL Query Optimization
Cloud & DevOps: AWS (S3, EC2, Lambda, CloudWatch), Docker, Terraform (IaC), Linux/Unix, GitHub Actions (CI/CD)
API Development & Software Engineering: RESTful API Design, OAuth2, JWT, Swagger/OpenAPI, Microservices, OOP, Unit Testing (PyTest, Unittest), Agile/Scrum, SDLC, Git/GitHub
Tools & Utilities: Postman, VS Code, Figma, Logging & Monitoring, Performance Optimization, Technical Documentation, JIRA, Debugging & Error Handling

PROFESSIONAL EXPERIENCE

Python Developer | Change Healthcare | TX, USADec 2024 - Present

- Engineered scalable backend components with FastAPI and Flask to deliver consistent, high-throughput access to clinical datasets, improving reliability and performance for patient-facing healthcare applications.
- Architected secure API ecosystems using JWT and OAuth2 to support regulated system-to-system communication, ensuring controlled access and adherence to PHI protection standards across all integrations.
- Enhanced complex data pipelines by optimizing ingestion, transformation, and validation processes using Pandas, NumPy, SQLAlchemy, and PostgreSQL, strengthening accuracy and stability of clinical reporting flows.
- Partnered with ML engineers to operationalize predictive models by creating inference services, monitoring model drift, and refining deployments built with Scikit-learn, TensorFlow, and PyTorch.
- Designed GenAI-powered enhancements using LangChain, RAG-based orchestration, and LLM integrations to automate documentation workflows and accelerate insights delivered to clinical and operational teams.
- Managed cloud deployment lifecycles across AWS (EC2, S3, Lambda) using Docker and automated CI/CD pipelines, ensuring reliable releases, continuous monitoring, and minimal downtime for mission-critical services.

Python Developer | HCL | IndiaJun 2021 - Jul 2023

- Led data processing initiatives by analyzing raw enterprise datasets, defining transformation rules, and building modular Python and SQL utilities that improved data consistency and reduced cleanup time for multiple teams.
- Developed domain-specific automation scripts using Python, Bash, and Java-based batch utilities to streamline recurring workflows, minimize manual processing, and ensure reliable delivery of operational reports.
- Built and productionized machine learning pipelines using Scikit-learn, TensorFlow, and PyTorch, integrating lightweight JavaScript utilities to visualize model outputs and support faster stakeholder decision cycles.
- Implemented authentication, validation, and integration logic for internal systems using JWT/OAuth2 and supplementary JavaScript clients, enabling smoother data exchange across distributed enterprise applications.
- Strengthened delivery pipelines by improving GitHub Actions workflows, containerizing workloads with Docker, and using Terraform for provisioning, resulting in fewer deployment conflicts and faster rollout times.
- Participated actively in Agile ceremonies, contributed to code quality through unit tests (PyTest, Unittest, JUnit), and documented improvements across Python, Java, and JavaScript modules to support long-term maintainability.

EDUCATION

Masters in Computer Science | University of north Texas, Dallas, USAMay 2025

Coursework: Scientific Data Visualization, Computer Architecture, Data Structures, Machine Learning, Artificial Intelligence, Computational Theory, Comparison of Learning Algorithms.

PROJECTS

Automatic Meeting Minutes Generator

- Created an application that processes audio/text transcripts into concise summaries, identifying key topics, decisions, and action items.
- Tackled debugging challenges in NLP pipelines using spaCy, NLTK, and BART to improve accuracy
- Planned a web interface with Flask/Django, ensuring scalability and responsiveness.
- Tech: Python, AWS Transcribe, Whisper (OpenAI), Flask/Django

E-commerce Development Project

- Built a secure clothing e-commerce platform using Django, React.js, PostgreSQL, and AWS.
- Integrated MFA and SSL/TLS-secured payment gateways, defending against SQL injection, brute force attacks, and e-skimming.
- Worked in an Agile team, managing tasks with JIRA and Git while debugging backend and UI issues during sprints.
- Optimized user experience with responsive UI, shopping cart, and streamlined checkout.
