SUMMARY:

Experienced SQL Server DBA with 8+ years of success designing and deploying secure, high-performing databases across on-premises, Azure, and AWS environments. Experienced in T-SQL scripting, query optimization, index management, and performance tuning. I am skilled in PowerShell automation and implementing HA/DR solutions like AlwaysOn, Log Shipping, and Replication. Played a key role in cloud migrations, capacity planning, and incident resolution. Strong background in database security, access control, auditing, and compliance (HIPAA, PII, GDPR), with a proven ability to deliver scalable, enterprise-grade solutions through cross-functional collaboration.

SKILLS:

- **Tools:**
 - **Databases:** SQL Server, MySQL, Redshift, Postgres
 - **ETL & Data Integration:** SSIS, Data Stage, AWS Glue
 - **Cloud Platforms:** AWS (RDS, EC2, S3), Azure (Azure SQL Database, Azure SQL Managed Instance, Azure Data Factory, Azure Monitor, Azure Active Directory (RBAC), Azure Backup/DR)
 - **Security & Compliance:** Role-Based Access Control, Encryption, Data Masking, HIPAA & PII
 - **High Availability & DR:** AlwaysOn, replication, clustering, PITR, failover strategies
 - **BI & Reporting Tools:** SSRS, SSIS, Erwin, Power BI
 - **Automation & Scripting/ DevOps:** PowerShell, dbatools, Python, T-SQL, PL/SQL
 - **Programming languages:** TSQL, PLSQL, Power shell
 - **Application Monitoring Tools:** Idera, Red Gate, SolarWinds, SQL Profiler, Datadog (familiar)
- **Additional Skills:**
 - Communication skills; exceptional attention to detail; effective presentation abilities; superior organizational and leadership capabilities; strategic approach to problem-solving.

EDUCATION, CERTIFICATIONS & TRAININGS:

- **Master's Degree** – University of Houston, 2014
- **B.S., Information Technology** – Addis Ababa Science and Technology University, 2000
- **Certifications:** SnowPro Core Certification – Snowflake (in- progress), Microsoft Azure Certification (in progress)
- **Training:** Microsoft SQL Database Administration (DBA) and Server Administration

WORK AUTHORIZATION:

- **US Citizen**

EXPERIENCE:

United Health Group, OH
Senior SQL Database Administrator

November 2022 to Present

- Monitor and optimize database performance, ensuring high availability and minimal downtime.
- Implement and manage database security, including user roles, privileges, and data encryption.
- Perform regular database backups and ensure that disaster recovery plans are in place and tested.
- Migrated data between SQL Server version 2016 to 2019 as well as on premise to cloud environment.
- Manage SQL Server security through role and security group creation.
- Design and manage data replication, clustering, and failover strategies for high availability.
- Automated routine database maintenance tasks using scripts or management tools.
- Automated backup, maintenance, and provisioning tasks using PowerShell
- Perform routine daily, weekly, and monthly database maintenance tasks.
- Optimize database design for improved performance and apply patches and updates as needed.
- Design and implement relational tables with appropriate data types, constraints, and indexing strategies to support application requirements and ensure data integrity.
- Create logical views to simplify complex queries, enforce data access control, and support reporting needs without exposing underlying table structures.
- Run a health check inspection, troubleshoot and resolve database-related issues ensuring minimal business impact.
- Monitor and resolve database blocking issues, monitor resource usage (CPU, memory, storage), and plan for capacity scaling.
- Collaborate with cloud infrastructure teams to manage storage, network, and compute resources for Oracle databases.
- Lead database migration projects from SQL Server to Oracle Single Instance, including schema translation, data mapping, and performance tuning to ensure seamless transition, minimal downtime, and full data integrity across platforms.
- Develop and maintain documentation for database configurations, processes, and procedures.
- Support development and DevOps teams with database provisioning, tuning, and deployment tasks.
- Ensure compliance with internal policies and external regulations (e.g., GDPR, HIPAA) regarding data privacy and retention.
- Participate in audits and assist in remediation efforts as needed.
- Demonstrated autonomous decision-making and strategic discernment in critical, complex matters.
- Acted as a liaison between user community, internal reporting, and data architecture teams to ensure business requirements were met.

Cerner Corporation, Kansas City, MO
SQL Server Database Administrator

September 2019 – October 2022

- Managed over 100 SQL Server instances for critical healthcare and finance applications.
- Designed databases with both front-end and back-end users in mind
- Installed and upgraded Database server and application tools.
- Migrated databases from SQL Server 2016 to 2019 with minimal downtime.
- Design and automate backup strategies using SQL Server Agent, Ola Hallengren scripts, and third-party tools such as Redgate
- Designed transactional replication and implemented robust backup/recovery strategies.
- Tuned databases for optimal performance and created stored procedures/views.
- Developed maintenance plans and jobs for optimal performance using tools like SQL Profiler, Query Analyzer, and Database Engine Tuning Advisor.
- Implement and manage high availability, disaster recovery, and automated backup strategies in both on-prem and cloud-hosted databases.

- Modified database structures based on application developer requirements.
- Define and update database schemas, tables, and relationships based on evolving project requirements.
- Collaborate with developers and analysts to translate business needs into efficient data models.
- Planned and implemented database backup and recovery strategies.
- Ensured the database is adequately backed up and able to be recovered in the event of memory loss.
- Monitored system performance and identifying problems that arise.
- Respond in a timely manner to user-reported errors.
- Protected the database against threats or unauthorized access.
- Report on metrics regarding usage and performance.
- Created routine maintenance procedures and jobs on SQL Server (e.g., DBCC commands, daily checks for system availability, database integrity, and periodic system account password changes).
- Participated in database development, including creating new databases, converting old ones, modifying existing structures, and creating reports.
- Performed regular audit to meet HIPAA security requirements using Idera Compliance Manager and Microsoft Mapping Tool Kit.
- Contributed to SQL Server 2019 migration from SQL Server 2016.
- Established transactional replication between SQL Server databases
- Suggested changes and improvements for database maintenance or protection.
- Regularly liaised with IT project managers and database programmers.
- Worked with collaboration with IT department to standardize department tools and led other programmers to ensure data integrity across all performance-based metrics and reporting

Costco Wholesale, TX

SQL Server Database Administrator

February 2016 – August 2019

- Maintained and optimized SQL Server databases to ensure a seamless and efficient flow of data.
- Managed and maintain all SQL Server databases for the company, including backups, performance monitoring, and troubleshooting.
- Performing database health checks and scalability assessments.
- Develop and implement database strategies to ensure data integrity and availability.
- Optimized database performance by regularly monitoring and tuning queries, indexes, and server configurations.
- Use native and third-party tools such as PowerShell, Azure CLI, dbatools, and SQLCMD for repeatable automation.
- Monitored hosted databases and provided performance enhancement recommendations (index management, filegroup adjustments, scheduled jobs).
- Supported existing data warehouse, reporting systems, and various tools.
- Collaborated with cross-functional teams to automate deployments, manage infrastructure, and implement database solutions that support business needs.
- Configured SQL Server replication for high availability.
- Identify and resolve database issues in a timely manner, including troubleshooting errors and performance bottlenecks.
- Monitored database security to ensure data is protected and comply with data privacy regulations.
- Participated in creating and maintaining database documentation, including data standards, procedures, and definitions.
- Stay current with industry trends and best practices for database management and make recommendations for process improvements.

- Plan and execute database upgrades and migrations, working closely with the IT team to ensure minimal downtime and impact on users.
- Developed and optimized database structures, stored procedures, DMVs, DDL triggers, and user-defined functions.
- Train and provide support to end-users on database functionality and usage.
- Conducted regular audits to ensure data integrity and accuracy.
- Collaborated with vendors to resolve database-related issues and implement new features.
- Troubleshoot and resolve database-related problems reported by end-users.
- Assisted software developers by configuring network related/Instance specific errors with establishing SQL server connection
- Communicate effectively with team members and stakeholders to provide updates on database-related projects and issues.
