

FAIYAZ MOHAMMED

773-946-0444 • faiyazdevop@gmail.com • LinkedIn

Experienced **DevOps Engineer** with extensive expertise in **Kubernetes, CI/CD, Ansible, Linux, Networking, and Security protocols**. Skilled in designing **containerized software engineering** solutions across **AWS, Azure, and GCP** platforms. Proficient in developing automation scripts using **Python** and **JavaScript**, managing infrastructure as code with **Terraform**, and implementing robust security and vulnerability management practices. Proven track record of leading high-performing teams, architecting scalable solutions, and optimizing operational efficiency in fast-paced environments.

WORK EXPERIENCE

Sr. DevOps Engineer • FiDimension • Sep 2023 – Present

- Engineered and maintained fully automated **CI/CD pipelines** using **Jenkins** and **Maven** for deploying enterprise applications, resulting in a 50% reduction in deployment time and ensuring consistent delivery across environments.
- Designed and implemented **Kubernetes** clusters with **Rancher** and **EKS**, managing deployment, scaling, and troubleshooting, which improved system availability by 30%.
- Developed infrastructure as code with **Terraform** to automate setup of VPCs, subnets, and security groups, reducing manual configuration errors by 40%.
- Automated cloud infrastructure provisioning and configuration management using **Ansible**, ensuring repeatability and compliance with security protocols, leading to a 25% increase in deployment speed.
- Built and deployed **Docker** containers for microservices, improving developer workflow and enabling seamless scaling in cloud environments.
- Managed cloud resources on **AWS** including **EC2, S3, and RDS**, with automated backups, patches, and scaling, supporting high availability and disaster recovery.
- Created and optimized deployment scripts using **Bash, Ruby, and Python** to automate build, test, and deployment processes, reducing manual intervention by 60%.
- Developed and maintained monitoring dashboards with **Splunk** and **ELK** stack, providing real-time insights into application performance and security vulnerabilities.

Site Reliability Engineer • Teladoc • Jun 2021 – Jun 2023

- Managed and optimized **Kubernetes** clusters in **AWS EKS** environment, implementing auto-scaling and troubleshooting, which increased system uptime by 20%.
- Designed and automated infrastructure deployment with **Terraform** and **Ansible**, ensuring secure and compliant configurations aligned with security protocols, reducing manual deployment errors by 35%.
- Developed **CI/CD pipelines** integrating **Jenkins, Nexus, and SonarQube** to automate testing and deployment, decreasing release cycle time by 40%.
- Containerized web applications using **Docker** and orchestrated with **Swarm** and **Kubernetes**, enhancing deployment consistency and scalability across environments.
- Automated cloud infrastructure provisioning on **AWS** using **CloudFormation** and **Terraform**, reducing setup time for new environments by 50%.
- Configured and maintained monitoring tools such as **Splunk, Zabbix, and New Relic** to ensure system health and security, enabling proactive issue resolution.

- Developed scripting solutions in **Python** and **Bash** to automate routine operational tasks, increasing team efficiency by 30%.
- Implemented security best practices and vulnerability scanning tools to ensure compliance and mitigate risks across cloud and on-premises infrastructure.

Sr Devops Engineer • Career Builder • Dec 2017 – Jun 2019

- Involved in developing and implementing the landscape of migration from on-premises to **AWS** Cloud Infrastructure and automated the process through CI/CD methodologies.
- Collaborated with consulting team and managed services partners to build and execute migration plans.
- Created monitors, alarms, and notifications for **EC2** hosts using **Cloud Watch**.
- Managed **AWS EC2** instances utilizing **Auto Scaling**, **Elastic Load Balancing** and **Glacier** for our Quality Assurance (QA) and User Acceptance Testing environments (UAT).
- Used security groups, network ACLs, Internet Gateways, NAT instances and Route tables to ensure a secure zone for organizations in **AWS Public Cloud**.
- Creating and maintaining **GIT** repositories also analyzing and resolving conflicts related to merge of source code.
- Configured and administered **Jenkins** for automated builds and Responsible for installing **Jenkins** master and slave nodes and maintenance of build pipeline.
- Installed and administered **nexus repository** and created roles and privileges to restrict access to the users.
- Used **Apache Tomcat** as application server for deploying the artifacts and configured it to host the websites.
- Deployed application packages on to the **Apache Tomcat** server.
- Coordinated with software development teams and QA teams.
- Performs system maintenance such as updating and patching of **Linux** systems, vulnerability remediation, and best practice implementation.
- Installed and configured **Nagios** as monitoring tool for disk usage, CPU utilization, list of open files etc. and sending alerts to our teams based on the same.
- Managed and monitored the server and network infrastructure using **Nagios**.
- Involved in setting up **Jira** as defect tracking system and configured various workflows, customizations, and plug-ins for the bug/ issue tracker.
- Involved in development of Test environment on **Docker Containers** and configuring the **Docker Containers** using **KUBERNETES**.
- Used **KUBERNETES** to deploy scale, load balance, scale and manage **docker containers** with multiple names spaced versions.
- Documented and published complete migration process of **Subversion** and have provided the support when needed.
- Wrote **Ansible** playbooks with **Python** SSH as a wrapper to manage configurations and the test playbooks on **AWS** instances using **Python**.
- Providing technical expertise, training, and facilitating knowledge transfer to new clients.
- Participated in the departmental on-call rotation after finishing the migration phase.

Devops Engineer • Maznet Solutions • Jul 2016 – Oct 2017

- Managing Builds results in **Jenkins** and Deployed using workflows.
- Integration with **Sonarqube** for code coverage, **Selenium** for automatic tests.
- Versioning of various components of an application into target environments.

- Responsible to Configuring and managing Virtual Machines, Storage, network and applications using **Windows Azure** portal.
- Experience in dealing with **Windows Azure IaaS** - Virtual Networks, Virtual Machines, Cloud Services, Resource Groups, Express Route, Traffic Manager, VPN, Load Balancing, Application Gateways, and Auto- Scaling.
- Used **Agile Central** for tracking work items and followed **Agile** methodology.
- Installing different plugins depending on the project requirement to have built working for different applications.
- Experience in setting up **Terraform** continuous build integration system.
- Used **Kubernetes** to orchestrate the deployment, scaling and management of **Docker Containers**.
- Used **Jenkins** pipelines to drive all micro services builds out to the **Docker** registry and then deployed to **Kubernetes**, Created Pods and managed using **Kubernetes**.
- Building/Maintaining **Docker** container clusters managed by **Kubernetes Linux, Bash, GIT, Docker**, on **GCP (Google Cloud Platform)**.
- Utilized **Kubernetes** and **Docker** for the runtime environment of the CI/CD system to build, test deploy.
- Working on POCs for integrating new technologies into current environments, worked on **Ansible** POC to make changes on dev servers with the help of admin team.
- Recommended and presented strategic plan to Enterprise Architecture, Capability Architects and Scrum teams on the adoption of **Microservices** at Unum that included desired outcomes and cost of delivery for Proof of Concept (POC).
- Developed **windows powershell script** to automate setting of user credentials and activation of windows helping the project team to get transformed to **Scrum methodology** using **TFS**.
- Hands on Exposure on **TFS** Version Control, **VSS, SVN** Experience with **Visual Studio Build Professional, NANT, MSBUILD**.
- Migrated Projects from **VSS** to **TFS 2012** with History Imported and managed multiple corporate applications in **Subversion (SVN)**.
- Worked on **Maven** to create artifacts from source code and deploy them in **Nexus** central repository for internal deployments.
- Worked with **TFS 2013/2015/2017, Visual Studio 2008-2017**.
- Performed dispatcher role to distribute tasks assigned to onshore team environments.

EDUCATION

Lindsey Wilson College

Master's computer engineering • Jan / 2021 – Dec / 2022
Kentucky

Jawaharlal Nehru Technological University

Bachelor's computer science • Jan / 2012 – Dec / 2016

SKILLS

Automation/Build Tools

Jenkins, Maven, Terraform, Ansible, GIT, Bash, Python, Ruby, YAML

Cloud Platform

AWS, Azure, GCP

Containerization & Orchestration

Docker, Kubernetes, Swarm

Operating Systems & Networking

Linux, Red Hat, Ubuntu, CentOS, Networking Principles

Monitoring & Security

Splunk, ELK, Zabbix, Security protocols, Vulnerability management

Other Skills

CI/CD pipelines, Infrastructure as Code, Security scanning, JavaScript, Certified Kubernetes Administrator (CKA), AWS Certified DevOps Engineer, Security+
