SUMMARY

- 9+ years of experience in software design and development, with expertise in all phases of the SDLC, including analysis, design, development, testing, maintenance, code refactoring, and migration.
- Experienced in various software development methodologies, including Waterfall, Agile (SCRUM), and Test-Driven Development (TDD).
- Skilled in developing web and enterprise applications using Java and J2EE technologies.
- Extensive experience in microservices development using Spring Boot.
- Proficient in building SOAP and RESTful web services and APIs.
- Strong knowledge of Spring modules such as Spring ORM, Spring AOP, and Spring IoC/Core.
- Hands-on experience in requirement analysis, high-level design using design patterns, and object-oriented programming (OOP) concepts.
- Knowledge of Message-Driven Beans (MDB), JMS, and MQ Series.
- Proficient in front-end technologies such as HTML, CSS, jQuery, JavaScript, Angular, and Vue.js.
- Experienced in business and technical requirements gathering, configuration management, team coordination, and software engineering processes.

PROFESSIONAL EXPERIENCE

Visa Inc., Austin

Role: Sr. Software Engineer

Duration: March 2022 – Present

Description:

Visa Inc. is a global payments technology company facilitating electronic fund transfers worldwide. I work within the B2B platform of the cybersecurity organization, providing identity and authorization solutions to both internal and external clients using Java-based tools integrated with ForgeRock for authentication.

Responsibilities:

- Developed RESTful microservices using Spring Boot.
- Built and published artifacts using Maven.
- Implemented Apache logging frameworks for context-based application logging.
- Developed functional programming modules in Java 8 using lambda expressions, Stream API, and Concurrency API.
- Used Splunk for log monitoring and analysis.
- Developed front-end applications using Angular.
- Worked in IntelliJ for application development and integration.
- Wrote and optimized SQL queries.
- Integrated Kafka and Apache JMS for inter-module messaging.
- Used Hibernate ORM for PostgreSQL access and MongoTemplate for MongoDB integration.
- Applied Java Collections and unit testing frameworks extensively.
- Developed CI/CD pipelines using Groovy and Jenkins.
- Integrated Ehcache across various frameworks (Spring WS, Apache CXF, REST APIs, Hibernate ORM, iBATIS).

Charter Communications, Denver

Role: Sr. Software Developer

Duration: April 2020 – March 2022

Description:

Worked in the Targeted Delivery Client Services (TDCS) team for Spectrum TV. Developed backend microservices for the video platform and frontend tools for internal admins and business users to manage configurations and subscriptions.

Responsibilities:

- Developed RESTful microservices using Spring Boot.
- Built and published artifacts using Maven.
- Created Docker images and published them to AWS ECR.
- Deployed containers to AWS using Kubernetes clusters.
- Integrated logging using Apache frameworks and monitored logs with Splunk.
- Built front-end applications using Angular.
- Implemented API documentation using Swagger.
- Used Java 8, Java Collections, and Mockito for testing.
- Integrated Cassandra DB into Spring Boot microservices using Spring Data.
- Managed Kafka clusters for real-time streaming and notifications.
- Integrated Redis for high-throughput and batch jobs.
- Deployed frontend builds (via npm) to AWS S3 with CloudFront distribution.
- Worked on AWS services including CloudWatch, CloudFront, EC2, and ECR.

NextEra Energy, Miami

Role: Sr. Software Developer

Duration: May 2019 – March 2020

Description:

Contributed to the digital customer experience portal covering accounts, billing, payments, service programs, and offers. I worked with modern technologies and scalable infrastructure for this Fortune 200 energy utility company.

Responsibilities:

- Used Git and Bitbucket for version control and code reviews.
- Developed microservices using Spring Boot.
- Applied design patterns like Singleton, Front Controller, DAO, and Service Locator.
- Built artifacts using Gradle.
- Created Docker images and deployed via AWS EC2 using CloudFormation templates.
- Used Logback and Apache for logging.
- Built front-end applications using Vue.js.
- Developed Vue.js components, routers, and state management using Vuex.
- Deployed web UIs on AWS S3 integrated with CloudFront.
- Used Swagger for documenting REST APIs.

- Created and managed API proxies using Apigee.
- Consumed and exposed RESTful services using JAX-RS and Spring Boot.
- Worked with SAP endpoints and large-scale integration systems.
- Wrote unit tests using JUnit and Mockito.

Wells Fargo, Phoenix

Role: Sr. Software Developer

Duration: June 2017 – May 2019

Description:

Contributed to IVR-related API development covering core banking services. Responsibilities included feature development, migration from Struts to Spring, and microservices modernization with security enhancements.

Responsibilities:

- Applied design patterns like Singleton, Prototype, Factory.
- Developed microservices with Spring Boot and migrated legacy Spring 3.x applications to Spring 5.x.
- Migrated SOAP services from Apache Axis to Apache CXF.
- Used Java 8, REST, SOAP, and JAX-RS for service development.
- Managed source control with SVN and Git.
- Used Log4J2, Logback, and Splunk for logging and monitoring.
- Developed SQL queries and integrated Oracle Exadata using Hibernate and iBATIS.
- Built and deployed artifacts using Gradle.
- Wrote and maintained unit tests using JUnit.
- Created and tested RESTful APIs using Postman and SoapUI.
- Developed JMS-based applications using Spring Boot.
- Built complex Hibernate mappings between entities.

Mobile Mini

Role: Software Engineer

Duration: August 2015 – June 2017

Description:

Worked on end-to-end development of web applications and customer portals for quoting, order processing, billing, and delivery for this global portable storage provider.

Responsibilities:

- Built UI using JSP, HTML, CSS, JavaScript, and AngularJS.
- Developed custom AngularJS directives and client-side validation.
- Implemented MVC architecture using Spring MVC.
- Developed RESTful and SOAP services using JAX-RS and Jersey API.
- Used Maven and Gradle for build and deployment.
- Managed Linux environments and performed root-cause analysis for app issues.
- Utilized Log4J for error monitoring and debugging.
- Wrote Java 8 code using lambda expressions and stream APIs.
- Implemented design patterns including Singleton, Factory, and Prototype.

**Education****California State University, Northridge**

Master of Science (M.S.)

Duration: January 2014 – May 2015

KL University, India

Bachelor of Technology (B.Tech)

Duration: August 2009 – May 2013

**Certifications****Post Graduate Program in Artificial Intelligence and Machine Learning**

University of Texas at Austin – McCombs School of Business

Duration: March 2023 – February 2024
