=====

PROFESSIONAL SUMMARY:

- Senior Full Stack Java Developer with 9+ years of experience in software development life cycle in Object Oriented paradigm, design and development of multi-Tier distributed, Enterprise applications and providing software solutions using Java/J2EE stack and related technologies
- Strong expertise in Core Java, Java 8/11/17, object-oriented design, multithreading, collections, and performance optimization.
- Commendable aptitude to learn new technologies and an Excellent Team Player able to communicate with all levels of personnel. Expert in taking requirements and analyzing requirements.
- Hands-on experience in developing microservices using Spring Boot, Spring MVC, Spring Cloud (Eureka, Config, Gateway), RESTful services, and distributed system patterns.
- Skilled in designing modern front-end applications with React.js (Hooks, Redux Toolkit) and Angular 8+, integrating with backend REST APIs and microservices.
- Experienced in building and consuming secure APIs using OAuth2, JWT, and OIDC, with integrations to AWS Cognito, Okta, and Azure AD.
- Expertise in AWS cloud services including Lambda, S3, EC2, ECS, EKS, API Gateway, RDS, DynamoDB, SQS, SNS, IAM, and CloudWatch for scalable cloud deployments.
- Strong background in containerization and DevOps using Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, Helm, and CloudFormation to automate deployments across cloud environments.
- Proficient in Apache Kafka for event-driven architectures and Apache Spark for large-scale data processing, ETL workflows, and streaming analytics.
- Extensive experience working with relational and NoSQL databases including PostgreSQL, Oracle, MySQL, MongoDB, and Redis for caching and high-availability systems.
- Solid experience with testing and quality engineering, using JUnit 5, Mockito, Postman, Swagger/OpenAPI, SonarQube, and Jacoco for code quality and automation.
- Hands-on experience integrating AI/GenAI capabilities into applications using OpenAI APIs, LangChain4j, embeddings, and vector databases (Pinecone/Elasticsearch) for semantic search, classification, and intelligent automation.
- Strong monitoring and observability experience using ELK Stack (Elasticsearch/Kibana), Splunk, Prometheus, Grafana, and AWS CloudWatch for performance tuning and root-cause analysis.
- Proven experience in refactoring and modernizing legacy J2EE applications, including Servlets, JSP, Struts, and XML-based configurations into modern Spring Boot microservices.
- Background working with SOA and SOAP Web Services (JAX-WS, JAX-RPC) and integrating them with newer REST-based microservices during digital modernization initiatives.
- Highly organized, analytical, and collaborative professional with strong communication skills, able to drive complex technical projects, mentor teams, and deliver robust solutions in Agile/Scrum environments.
- Expertise in various Java 8 latest features such as lambda, functional interfaces, streams -parallel processing, Optional keyword, and Java time API.
- Developed Java Applications in various IDE tools like Eclipse Net Beans, JBoss Developer Studio, Visual Studio and WebStorm.
- Having hands-on expertise in using Test Driven Development (TDD) and Behavior Driven Development (BDD) and Cucumber respectively.

TECHNICAL SKILLS:

Programming Languages	Java 11/17, Java 8, TypeScript, JavaScript (ES6+), SQL, Python
Backend Technologies	Spring Boot 2.x/3.x, Spring MVC, Spring WebFlux, Spring Data JPA, Hibernate, Spring Security (JWT, OAuth2, OIDC), Spring Cloud (Eureka, Config, Gateway), Microservices Architecture, RESTful Web Services, SOAP Web Services, Resilience4j (Circuit Breaker, Retry), Spring Batch
J2EE Technologies	Servlets, JSP, Tag Libraries, JDBC, JNDI
Frontend Technologies	React.js, Material UI, Angular 8+, RxJS, HTML5, CSS3, Bootstrap, Tailwind CSS, Axios, Fetch API
Cloud & DevOps	AWS (Lambda, API Gateway, S3, EC2, ECS, EKS, RDS, DynamoDB, CloudWatch, SQS, SNS, IAM), Docker, Kubernetes, Helm, CI/CD pipeline, Terraform, CloudFormation
Big Data & Streaming	Apache Kafka, Apache Spark, AWS Glue (ETL)
AI Tools & Integrations	OpenAI API, Azure OpenAI, LangChain4j, Pinecone, Elasticsearch
Databases	PostgreSQL, Oracle 11g/12c, MySQL, MongoDB, Redis(caching), DynamoDB
Testing & Quality	JUnit 5, Mockito, Postman, Swagger/OpenAPI, SonarQube, Jacoco
Monitoring & Logging	Splunk, Elasticsearch, Logstash, Kibana, Prometheus, Grafana
Tools / Methodologies	Git, GitHub, GitLab, Maven/Gradle, JIRA, Confluence
Design patterns	MVC3, Factory, Abstract Factory, Singleton, Session Facade

PROFESSIONAL EXPERIENCE

Client: Broadridge, Newark, NJ

Jan2023-Present

Role: Senior Full Stack Java Developer

Responsibilities:

- Participated in all phases of SDLC including requirements gathering, design, development, testing, deployment, and production support in an Agile-Scrum environment.
- Designed and developed RESTful microservices using Spring Boot, Spring MVC, Spring WebFlux, and implemented service-to-service communication using Spring Cloud components.
- Worked on migrating legacy J2EE modules, Servlets, JSPs, SOAP Web Services into modern Spring Boot-based microservices to improve scalability and maintainability.
- Built secure authentication and authorization workflows using Spring Security, OAuth 2.0, JWT, and OIDC, integrated with Okta, Auth0, and Azure AD.
- Developed and enhanced React.js UI components with Hooks, Redux Toolkit, Context API, consuming backend APIs using Axios/Fetch and ensuring seamless user interaction.
- Implemented event-driven communication using Apache Kafka, building producer/consumer modules for asynchronous transaction processing and workflow automation.
- Developed large-scale data processing and ETL pipelines using Apache Spark (Spark SQL, Spark Streaming) for transforming financial datasets and improving data accuracy across services.
- Integrated OpenAI API and LangChain4j to implement intelligent document processing, classification, and semantic search within microservice modules.
- Built serverless components using AWS Lambda for scheduled jobs, data ingestion, and automated backend operations.

- Worked extensively with AWS cloud services such as S3, EC2, ECS, EKS, RDS, DynamoDB, SQS, SNS, CloudWatch, and API Gateway for application hosting, monitoring, and scaling.
- Automated infrastructure provisioning using Terraform, enabling consistent deployment of cloud resources and reducing manual configuration overhead.
- Configured CI/CD pipelines using Jenkins and GitHub Actions to automate build, test, and deployment processes across multi-environment setups.
- Implemented comprehensive logging and monitoring solutions using ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Prometheus, and Grafana for application observability.
- Utilized Redis caching, optimized SQL queries, and applied performance tuning techniques to improve API response times and reduce latency.
- Performed unit testing using JUnit 5, Mockito and validated service contracts with Swagger/OpenAPI, ensuring high-quality and stable API delivery.

Environment: Java 11/17, Spring Boot 3.x, Spring MVC, Spring WebFlux, Spring Data JPA, Spring Security (OAuth2, JWT), Microservices, J2EE (Servlets, JSP), React.js, JavaScript (ES6+), HTML5, CSS3, Apache Kafka, Apache Spark, PostgreSQL, Redis, AWS (Lambda, S3, EC2, ECS), Docker, Kubernetes, Terraform, Jenkins, Maven, Swagger/OpenAPI, JUnit 5, Splunk, OpenAI API.

Client: CBRE, Dallas, Texas

Sep2020-Nov2022

Role: Full Stack Java Developer

Responsibilities:

- Participated in Agile ceremonies and collaborated with cross-functional teams to gather requirements, plan sprints, and deliver enhancements for CBRE's property management and real-estate operations platform.
- Designed and developed RESTful microservices using Spring Boot, Spring MVC, Spring Security, and integrated with front-end applications used for property listings, lease management, tenant onboarding, and service requests.
- Worked on modernizing the legacy modules by rebuilding existing J2EE components, JSP pages, and SOAP Web Services into Spring Boot based microservices to improve application performance and maintainability.
- Built responsive UI components using Angular 7/8, implementing routing, forms, reusable widgets, and API integrations for internal users and field agents.
- Integrated services with Hibernate/JPA for data persistence and optimized database operations with Oracle queries, caching, and batch processing.
- Developed messaging components using Apache Kafka for asynchronous communication between internal property, workflow, and billing services.
- Implemented AWS Lambda functions and Java-based automation scripts for scheduled jobs, document uploads, report generation, and data synchronization.
- Containerized microservices using Docker and deployed them on AWS EC2, incorporating CI/CD automation with Jenkins and Maven.
- Integrated Spring Actuator and AOP for monitoring application health, performance metrics, and runtime logs.
- Performed unit testing using JUnit, Mockito, Karma, Jasmine, and validated REST endpoints using Postman and Swagger.
- Automated backend operations using UNIX shell scripts and PL/SQL, supporting routine data updates and batch workflows.

- Configured application logging and error tracking using Log4j/ELK Stack, ensuring stability during production deployments.
- Built Angular 8 single-page applications (SPAs) using TypeScript, HTML5, CSS3, Bootstrap, and SAAS, implementing routing, directives, services, and reusable UI components.
- Integrated Spring ORM with Hibernate for persistence, utilizing transaction management, caching, and batch processing with Oracle databases.
- Developed Kafka-based messaging pipelines and multi-threaded producer-consumer applications for real-time, asynchronous data exchange between services.
- Developed and monitored Spring Boot microservices with Spring Actuator and AOP, providing metrics, logging, and health monitoring.
- Configured Log4j for centralized error monitoring and implemented CI/CD workflows to streamline deployment and ensure application stability.

Environment: Java 8/11, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Microservices, Servlets, JSP, SOAP Web Services, Angular 7/8, JavaScript, HTML5, CSS3, Bootstrap, Apache Kafka, Oracle 11g, AWS EC2, Lambda, S3, CloudWatch, Docker, Jenkins, Maven, Git, JUnit, Mockito, Swagger, Postman, Hibernate.

Client: Docusign, San Francisco, CA

April 2019-Aug 2020

Role: Java Software Engineer

Responsibilities:

- Worked in an Agile environment to develop backend modules for Docusign's digital agreements and incentive management platform using Spring Boot, Spring MVC, Spring Data, and Hibernate.
- Implemented new RESTful services and redesigned existing modules by converting J2EE components, SOAP services, and XML-based configurations into modern Spring Boot modules.
- Worked with MongoDB and relational databases to handle user reward data, incentive workflows, and agreement metadata, ensuring high data accuracy and optimized query performance.
- Developed UI components using React.js, Angular 8, and jQuery, integrating them with backend services for document processing, approvals, and internal workflows.
- Integrated internal and external services using JAX-RS/Jersey and enhanced system reliability with fault-tolerant APIs and improved error handling.
- Replaced legacy messaging (IMS) calls with AWS SQS and built Lambda functions for scheduled processing, email notifications, and bulk updates.
- Developed batch jobs using Spring Batch for processing incentives, generating reports, and syncing data across systems.
- Utilized Kafka for asynchronous data flow between agreement, notification, and audit services.
- Performed build and deployment automation using Jenkins, Git, Maven, and monitored application performance using Splunk and AppDynamics.
- Ensured code quality through TDD practices using JUnit, Mockito, and participated in regular code reviews and sprint deliverables.
- Implemented spring boot framework, managed dependencies, and map collections from Mongo DB to access employee rewards and sales incentive program.
- Created modules using spring data API, Spring Batch, Spring annotations, Hibernate and XML technologies to reduce the time at configuration level.
- Produced centralized Spring Restful Web Services for Enterprise applications to consume in JSON format within a trusted client-server environment.
- Implemented API versioning, request validation, and exception handling across Spring Boot services to standardize communication between internal modules.

- Participated in design discussions to break down monolithic functionality into smaller, maintainable microservices and contributed to defining API contracts.

Environment: Java 8/11, Spring Boot, Spring MVC, Spring Data JPA, Spring Batch, JAX-RS (Jersey), J2EE (Servlets, JSP), SOAP Web Services, MongoDB, AWS SQS/Lambda/S3, React.js, Angular 8, JavaScript, HTML5, CSS3, Bootstrap, Kafka, Jenkins, Git, Maven, Splunk, AppDynamics, Postman, Swagger.

Client: Verizon, Texas

Nov 2017-Feb2019

Role: Java Full Stack Developer

Responsibilities:

- Designed and developed RESTful microservices using Spring Boot, Spring MVC, Hibernate, and integrated them with internal systems for customer accounts, billing, orders, and network operations.
- Worked on migrating older J2EE components, JSP pages, Servlets, and SOAP Web Services into Spring Boot services to improve system scalability and reduce maintenance overhead.
- Built dynamic and reusable UI components using React.js and Angular 8/9, implementing forms, dashboards, and workflow screens for internal teams and customer-facing applications.
- Integrated microservices with GraphQL, REST, and SOAP interfaces to support cross-platform communication across various Verizon business units.
- Developed Kafka-based producer and consumer modules for real-time processing of customer activity, billing notifications, and service updates.
- Created CI/CD pipelines using Jenkins, automated builds with Maven, and deployed containerized services using Docker, ECS, and AWS Fargate.
- Managed cloud deployments and configurations on AWS EC2, ECS, Fargate, S3, RDS, and optimized the performance of microservices across Dev, QA, and Production environments.
- Set up application monitoring and alerting through CloudWatch and performed log analysis using ELK Stack to troubleshoot production issues.
- Improved performance by optimizing SQL queries, hibernate mappings, and caching frequently accessed data.
- Developed integrations with MongoDB and PostgreSQL using Spring Data for storing customer and order-related information.
- Worked closely with QA and DevOps teams to resolve issues, validate integrations, and support end-to-end system testing during deployments.
- Participated in Agile ceremonies including sprint planning, daily standups, code reviews, and sprint demos, ensuring timely delivery of project features.
- Migrated Oracle 11g databases to PostgreSQL using ESF Migration Toolkit and optimized query performance through schema refactoring.
- Integrated Apache Kafka with Spring Boot microservices for real-time message processing and asynchronous event handling.
- Implemented Angular services and HTTP clients for RESTful API integration, creating modular and maintainable Single Page Applications (SPAs).
- Enhanced overall application performance and scalability through Angular component-based architecture, React optimizations, and Microservices integration with Swagger and MQ brokers.

Environment: Java 8/11, Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, Microservices, Servlets, JSP, SOAP Web Services, REST, GraphQL, React.js, Angular 8/9, JavaScript, HTML5, CSS3, Bootstrap, Apache Kafka, AWS EC2, ECS, Fargate, S3, RDS, CloudWatch, Docker, Jenkins, Maven, Git, ELK Stack, MongoDB, PostgreSQL.

Client: Aegis Consulting, Hyderabad, India

July 2016-June 2017

Role: Java Developer

Responsibilities:

- Involved in analysis, design, development, and testing of a workflow-based enterprise application using Core Java, Spring Boot, and Microservices architecture.
- Developed microservices using Spring Boot and deployed them on AWS EC2 instances, supporting scalable backend services for internal business workflows.
- Worked on asynchronous communication modules using Apache Kafka, enabling real-time processing of workflow events and notifications.
- Built dynamic UI screens using Angular 2/5 and migrated older AngularJS controllers into modern Angular components to improve performance and maintainability.
- Developed REST and SOAP-based integrations using JAX-RS, JAX-WS, and implemented SOA principles for communication between internal modules.
- Worked with Oracle, SQL Server, MongoDB, and PostgreSQL for data storage, writing SQL queries, maintaining data consistency, and creating stored procedures where needed.
- Implemented Spring Security for authentication and authorization across microservices and mobile client applications.
- Built drag-and-drop UI components and custom widgets using Angular and HTML to support internal data operations.
- Integrated Elasticsearch for advanced search features and used Kibana for log analysis and monitoring.
- Supported deployments on Pivotal Cloud Foundry (PCF) and assisted in setting up AWS RDS databases, data migration, and capacity planning tasks.
- Wrote unit tests using JUnit, performed debugging, and supported defect resolution throughout SDLC.
- Designed, developed a custom, single-page, responsive Web Application on front end using Angular.
- Developed drag and drop tree view, web application to transfer & arrange data using Angular, HTML.
- Successfully Generated consumer group lags from Kafka using their API Kafka- Used for building real-time data pipelines between clusters.
- Provided PostgreSQL, Oracle, and MS SQL Server installation, patching, cloning, configuration, migration, upgrade, and capacity planning.

Environment: Java 8, Spring Boot, Spring MVC, Microservices, SOAP Web Services, REST, Angular 2/5, JavaScript, HTML5, CSS3, Bootstrap, Apache Kafka, SQL Server, Oracle 11g, PostgreSQL, MongoDB, AWS EC2/RDS/Lambda, PCF, JAX-RS, JAX-WS, Elasticsearch, Kibana, JUnit, Git, Maven.

EDUCATION:

CVR College of Engineering, Hyderabad, India

Bachelor of Technology in Computer Science

Relevant Coursework:

- Object-Oriented Programming, Python programming, Algorithm Design & Analysis, Database Management Systems, Software Engineering, Data Science, Artificial Intelligence, Cloud Computing, Data Structures through Java & C, Computer Organization, Web Technologies, Computer Networks & Security, Internet of Things, Big Data Analytics.
