

Soul Lee

(480) 409-4008 • Atlanta, GA, 30338 • soul.lee.pro@gmail.com • [linkedin.com/in/soul-lee-in/](https://www.linkedin.com/in/soul-lee-in/)

Senior Software Engineer

React | Java | Spring Boot | Kafka | Kubernetes

Seasoned Senior Software Engineer with extensive experience designing and developing full stack solutions. Proficient in React, Spring Boot, Kubernetes, and Kafka. Focused on building scalable applications and optimizing performance while collaborating in agile teams to deliver innovative, secure, and efficient software.

PROFESSIONAL SKILLS

- **Frontend:** React, JavaScript, jQuery, Thymeleaf, state management, lazy loading, code splitting
- **Backend:** Java, Spring Boot, JEE, JPA, REST, Kafka, Oracle, MongoDB, caching techniques
- **Cloud & DevOps:** Docker, Kubernetes, Git, Maven, Nexus, Linux, AWS
- **Security & Testing:** JWT, OAuth, TDD, BDD, JUnit, Cucumber-JVM, OWASP, Integration Testing, Unit Testing

WORK EXPERIENCE

Walmart – Remote

01/2023 – Present

Senior Software Engineer

- Developed Walmart Store Recommendation Feature using React, Spring Boot, REST API, Kubernetes, and Kafka to deliver dynamic, scalable, and reliable customer solutions.
- Engineered responsive and efficient user interfaces with React and JavaScript to enhance usability and deliver seamless interaction across diverse devices.
- Optimized component structure using React best practices and modern JavaScript techniques to significantly improve performance and streamline the client-side experience.
- Designed and implemented robust Spring Boot microservices with RESTful APIs to process data efficiently and support the recommendation engine, ensuring consistent performance.
- Integrated Kafka messaging system with backend services to enable real-time data streaming and reliable communication across distributed components, ensuring robust scalability.
- Deployed containerized applications on Kubernetes clusters while executing Junit and Selenium tests to validate functionality and optimize deployment pipelines efficiently.
- Collaborated with cross-functional teams in agile sprints and mentored junior developers, sharing best practices to improve code quality and streamline project delivery.

Chewy – Plantation, FL

07/2020 – 12/2022

Senior Software Engineer

- Engineered Chewy Community Forum Platform leveraging React, Spring Boot, REST API, Kafka, and Kubernetes to provide interactive and scalable solutions for online engagement.
- Developed intuitive user interfaces using React and JavaScript, ensuring dynamic content rendering and a seamless browsing experience for forum users.

- Enhanced client-side performance through optimized React component architecture and efficient state management, significantly and remarkably reducing load times and improving interactivity.
- Implemented robust Spring Boot services with RESTful endpoints to manage forum data, ensuring efficient processing and seamless integration with external systems.
- Configured Kafka messaging for real-time notifications and data synchronization, integrating backend operations with reliable, high-performance communication channels to ensure stability.
- Managed container orchestration on Kubernetes clusters while performing CI/CD pipeline enhancements and executing Junit tests to validate system reliability efficiently.
- Collaborated with multidisciplinary teams in agile frameworks and mentored colleagues by sharing insights and best practices, fostering continuous improvement in project delivery.

Insight Global – *Atlanta, GA*

11/2016 – 06/2020

Full Stack Engineer

- Executed HealthMine COVID-19 HRA project adhering to HIPAA standards, utilizing Spring Boot and React to create secure, interactive healthcare solutions effectively.
- Developed Shyft Moving mobile and fintech project from scratch, implementing React interfaces and Java backend services to streamline user transactions and financial workflows.
- Led migration of PHP-based Etsy platform to modern architectures, integrating Spring framework services and RESTful APIs to enhance performance and data management.
- Optimized backend processes using Kafka messaging and Java-based microservices during HealthMine project, achieving improved data flow and system reliability consistently.
- Enhanced continuous integration practices by refining CI/CD pipelines and employing Junit tests during Etsy migration, fostering resilient deployments and agile responsiveness.

Amazon – *Seattle, WA*

01/2015 – 10/2016

Full Stack Developer

- Developed robust full stack applications at Amazon, employing Java, JSP, and Spring to build scalable, customer-focused web solutions with excellence.
- Implemented efficient backend services using Spring Boot and RESTful APIs, ensuring reliable data management and smooth integration with multiple enterprise systems.
- Designed interactive JSP-based user interfaces efficiently combined with JavaScript enhancements to improve usability and provide dynamic content delivery across platforms.
- Collaborated closely with cross-functional teams and individual stakeholders to align project goals, share technical expertise, and drive agile development practices.

EDUCATION

National University of Singapore | *Singapore*

Bachelor of Science in Mathematics and Computer | 2010 - 2014

The University of Georgia | *Athens, GA*

Bachelor's Degree, Computer Software Engineering | 2014 - 2018
