

SREEAN REDDY RIKKALA

DevSecOps Engineer

Omaha, NE, USA || (551) 888-0099|| sreeanreddyrikkala@gmail.com || LinkedIn

SUMMARY

- **Cybersecurity Professional** with 4+ years' experience in enterprise and cloud environments, specializing in security operations, **SIEM**, incident response, vulnerability management and end-to-end software deployment across Agile and **DevSecOps** environments.
- Specialized in **network security architecture**, **information security program** development, and **network infrastructure security** across enterprise environments.
- Skilled in **containerization and orchestration tools** including **Docker**, **Kubernetes (EKS, AKS, GKE)**, and **Helm**, enabling secure, scalable and resilient application deployments with container security scanning.
- Expertise in **CI/CD tools** like **Jenkins**, **GitHub Actions**, **GitLab CI**, and **CircleCI**, integrating **security scanning**, **automated testing**, **build**, and **secure deployment workflows** for high-velocity delivery pipelines.
- Hands-on experience with **configuration management tools** such as **Ansible**, **Chef**, and **Puppet**, and scripting with **Bash**, **Python**, and **Groovy** for security hardening and compliance automation tasks.
- Deep understanding of monitoring and logging using Prometheus, Grafana, ELK Stack, Datadog, and CloudWatch, ensuring **threat detection**, **security monitoring**, and **compliance tracking**.

TECHNICAL SKILLS

Security & Compliance	SIEM (Security Information and Event Management), SOAR, Threat Hunting, Incident Response, Vulnerability Assessment, Security Auditing, Risk Assessment, Security Hardening, HIPAA, PCI-DSS, SOC 2, NIST 800-53, NIST CSF, ISO 27001
Security Tools	Splunk, CrowdStrike (EDR), Nessus, Qualys, OpenVAS, Metasploit, Burp Suite, OWASP ZAP, Wireshark, Nmap, ELK Stack, IDS/IPS, Linux troubleshooting
Cloud Security & Platforms	AWS (Security Hub, GuardDuty), Virtualization & Cloud Provisioning
Networking	Network Security Architecture, Firewalls, VPNs, IDS/IPS, Load Balancers, DNS, TCP/IP, HTTP/HTTPS, Infrastructure Security
Automation & Scripting	Python, Shell Scripting, Bash, Perl, Ruby, PowerShell
Infrastructure as Code (IaC)	Terraform, Ansible, Chef, Puppet, CloudFormation
Containerization	Docker, Kubernetes, OpenShift, Helm, Docker Swarm
Programming Languages	C/C++, Java, JavaScript
Monitoring & Logging:	Prometheus, Grafana, ELK Stack, Splunk, Nagios, Datadog
Configuration Management	Ansible, Chef, Puppet, SaltStack
CI/CD Tools	GitLab, Jenkins, Travis CI, CircleCI, Bamboo
Databases	MySQL, PostgreSQL, MongoDB, Redis, Cassandra
Continuous Testing	Selenium, JUnit, TestNG, SonarQube, JMeter
Operating Systems	Windows, LINUX, MacOS
Other Technical Skills	Postman, Apache Spark, Nexus, Artifactory, Docker Registry, Scrum, Kanban, Agile Development, Microservices Architecture, Azure Functions, Auto-scaling, Clustering

EDUCATION

Master of Science in Cybersecurity

– University of Nebraska Omaha, Omaha, NE, USA

Bachelor of Technology in Information Technology

– Vidya Jyothi Institute of Technology – Hyderabad, Telangana, India

CERTIFICATIONS

- CompTIA Security+
- CompTIA CySA+ ce Certification
- CompTIA Security Analytics Professional

EXPERIENCE

Blue Cross and Blue Shield of Nebraska, NE | DevSecOps Engineer

Aug 2024 - Present

- Automated provisioning of RHEL environments using Ansible, Terraform, and Python/Shell scripts, reducing manual intervention by 45% and ensuring consistent deployment across HIPAA-compliant systems. Streamlined environment setup to support claims adjudication, provider access, and eligibility workflows.
- Orchestrated Kubernetes containers with Helm charts for microservices deployment, enabling zero-downtime rollouts and reducing production defects. Maintained alignment with HIPAA and internal compliance policies across multi-region hybrid environments.
- Engineered CI/CD pipelines using GitLab, Jenkins, and SonarQube to enforce secure code integration, quality checks, and streamlined deployment in Agile sprints. Accelerated delivery cycles for healthcare-facing applications with rollback and testing automation integrated in each stage.
- Provisioned scalable AWS resources (EC2, IAM, S3, Auto Scaling) using CloudFormation and Terraform, supporting backend systems for insurance claim workflows and real-time eligibility checks. Implemented secure infrastructure via IAM roles, tagging, and audit-ready controls.
- Deployed and managed monitoring stack with Prometheus, Grafana, and Splunk to enable real-time performance tracking, RCA workflows. Reduced MTTR by 35% while improving service reliability and availability across critical workloads.
- Configured load balancers, DNS, and VPN tunnels to network security architecture for hybrid environments, supporting encrypted data exchange and compliant access to EHR systems. Tuned network infrastructure to reduce latency and enhance availability in production.

Accenture, India | DevSecOps Engineer

Mar 2020 – July 2023

- Automated infrastructure provisioning using Terraform and Azure ARM templates for secure deployment of VNets, firewalls, and PostgreSQL DBs. Achieved compliance with PCI-DSS and SOC2 standards through encryption policies and role-based access controls.
- Migrated core financial Java apps into Docker containers deployed on Red Hat OpenShift and ECS with zero-downtime rollouts. Configured liveness probes, sidecar loggers, and restart policies to support high-volume transaction traffic.
- Built and optimized CI/CD pipelines using Bamboo and Jenkins for credit risk and transaction modules with integration to SonarQube and Nexus. Accelerated deployment velocity by 70%.
- Created Chef cookbooks and shell scripts to enforce OS-level hardening, middleware patching, and app config standardization. Rolled out across 500+ nodes with Chef Automate and InSpec validations to support audit readiness.
- Built Python and PowerShell automation to validate patch drift, update CMDB entries, and collect quarterly audit evidence. Used REST APIs and CLI tools to sync metadata with ServiceNow and export compliance dashboards.
- Established centralized logging with Fluentd, CloudWatch, and Kibana to monitor payment API latency, failures, and JVM metrics. Created visual dashboards and alerts tied to SLOs and anomalous behavior patterns.
- Managed release workflows using Rundeck and Jenkins for financial microservices and backend jobs across prod, UAT, and QA. Enabled controlled deployments with rollback support and real-time release tracking via Slack bots.
- Collaborated with Dev, QA, and Infra teams in Agile sprints using Jira and Confluence to manage tickets, post-mortems, and runbooks. Contributed to a 25% quarter-over-quarter improvement in change success rate.
