

SRIKANTH REDDY

Data Analyst

Location: NH, USA | Mobile: (551) 300-2660 | Email: srikanth.reddy.0628@gmail.com | [Linkedin](#)

SUMMARY:

- Proactive and detail-oriented Data Analyst with 6+ years of experience in the healthcare, banking and financial sectors, specializing in data wrangling, reporting, and delivering actionable business insights.
- Proficient in data cleaning, preprocessing, and transformation using Python (pandas, NumPy), SQL, and R, ensuring high-quality datasets for accurate analysis and reporting.
- Skilled in performing foundational exploratory data analysis (EDA) with Python (Matplotlib, Seaborn) to identify trends and support business decision-making.
- Experienced in building and automating interactive dashboards and reports using Power BI and Tableau, enabling real-time monitoring and improving communication with stakeholders.
- Hands-on experience in managing ETL pipelines and processing workflows using SQL Server and cloud platforms (AWS), streamlining operations and enhancing efficiency.
- Strong focus on stakeholder collaboration, translating technical insights into actionable recommendations to align with business objectives and improve outcomes.
- Adept in utilizing advanced Excel (pivot tables, VLOOKUP, VBA) for financial analysis and reporting, ensuring data consistency and supporting client portfolio reviews.
- Knowledgeable in data governance, security protocols, and regulatory compliance, ensuring sensitive financial data is managed responsibly and accurately reported.
- Excellent interpersonal and presentation skills, fostering effective collaboration across cross-functional teams and delivering impactful presentations to stakeholders.
- Demonstrated ability to balance foundational tasks like data preparation and reporting with growth into advanced analytics, making steady contributions to organizational goals.

SKILLS:

Methodologies:	SDLC, Agile, Waterfall
Programming Language:	Python, SQL, R
Packages:	NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, TensorFlow, Seaborn, dplyr, ggplot2
Visualization Tools:	Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP)
IDEs:	Visual Studio Code, PyCharm, Jupyter Notebook, IntelliJ
Database:	MySQL, PostgreSQL, MongoDB, SQL Server
Cloud Platform:	Amazon Web Services (AWS)
Other Technical Skills:	SSIS, SSRS, SAS, Machine Learning Algorithms, ETL\ELT Tools, Statistics, ServiceNow, Alteryx, Google Big Query, Power Query, Probability distributions, Mathematics, Confidence Intervals, ANOVA, Advance Analytics, OLAP & OLTP, MS Office Suite (Microsoft Word, PowerPoint, MS Visio), Hypothesis Testing, Regression Analysis, Linear Algebra, Advance Analytics, Data Mining, Big Data, Data Integration, Data Interpretation, Data Pipeline, Data Visualization, Data warehousing, Data transformation, Data Governance, Data Storytelling, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Descriptive analytics, Git, GitHub, JIRA
Soft Skills:	Time Management, Leadership, Strategy Planning, Problem-Solving, Negotiation, Decision-Making, Documentation and Presentation, Analytical Thinking, Attention to Detail, verbal and written communication
Operating Systems:	Windows, Linux, Mac OS

PROFESSIONAL EXPERIENCE: -

Data Analyst - Cigna, USA

May 2024 – Current

- Led the extraction and consolidation of over 10 million electronic health records (EHR), patient vitals, and diagnostic data from multiple healthcare systems using SQL queries and Python (pandas). Ensured data accuracy and consistency, resulting in improved healthcare data integration processes, which contributed to better clinical decision-making and streamlined operations across departments.
- Utilized Python libraries such as pandas and NumPy to clean and preprocess healthcare datasets, addressing missing values, removing outliers, and detecting inconsistencies. Reduced patient data errors by 25%, leading to more reliable patient information and enhancing the effectiveness of clinical interventions.

- Conducted exploratory data analysis (EDA) using seaborn and matplotlib to identify patterns and key clinical features impacting surgical outcomes. This provided critical insights that helped refine downstream modeling efforts, contributing to improved patient care strategies and outcomes forecasting.
- Applied statistical methods like ANOVA and hypothesis testing in Python to validate the significance of clinical risk factors. Aligned findings with healthcare standards, ensuring a robust and scientifically grounded analysis that supported regulatory compliance and informed clinical risk management.
- Developed interactive dashboards in Tableau to visualize patient risk levels, trends, and key clinical metrics. These dashboards improved clinical decision-making and reduced manual reporting time by 30%, making healthcare operations more efficient and responsive to patient needs.
- Designed and implemented ETL pipelines using SQL Server and Python (pandas, pyodbc), automating the extraction, transformation, and loading of clinical data from multiple sources. This initiative reduced processing time by 40%, resulting in quicker access to accurate patient data for analysis and facilitating timely clinical interventions.
- Optimized SQL queries and database indexing to improve the performance of patient data retrieval. This reduced query run-time by 35%, increasing workflow efficiency and supporting faster decision-making in clinical.
- Collaborated closely with data scientists, clinicians, and healthcare professionals to align analysis and reporting with clinical objectives. This ensured the practical application of insights, resulting in actionable recommendations that directly improved patient outcomes and optimized healthcare delivery processes.
- Presented analysis findings to stakeholders through concise reports and visualizations, effectively bridging the gap between technical data insights and actionable business decisions, thereby driving strategic healthcare improvements and ensuring key stakeholders were equipped to make informed decisions.
- Created standard and ad-hoc reports using SQL and Excel to address immediate healthcare reporting needs. Demonstrated attention to detail and adaptability, ensuring that reports were aligned with business requirements and contributed to streamlined healthcare operations and timely decision-making.

Data Analyst - HCL Technology, India

Nov 2019 – Dec 2022

- Engineered ETL pipelines using SQL and Python to integrate financial data across PostgreSQL, CRM, and banking platforms, reducing processing time by 30% through optimized query design and batch processing implementations
- Developed automated data preprocessing framework in Python (pandas, NumPy) to clean 5M+ customer records, implementing advanced algorithms for missing value imputation and outlier detection, achieving 99.9% data quality standards
- Built and maintained real-time Power BI dashboards integrating multiple data sources, creating interactive visualizations for customer segments and financial trends, reducing reporting cycles by 40%
- Implemented automated validation systems using Advanced Excel (VBA, pivot tables) and Python scripts to ensure data accuracy across financial reports, achieving 100% compliance with banking standards
- Led cross-functional initiatives with wealth managers to optimize customer targeting strategies, resulting in 25% increased engagement for premium products
- Enhanced segmentation model performance through iterative refinement, improving accuracy and recall by 20% while maintaining business relevance
- Delivered data-driven presentations to C-level executives, translating complex analyses into actionable business strategies that drove 15% revenue growth through targeted cross-selling
- Spearheaded A/B testing framework for marketing campaigns, achieving 18% improvement in customer satisfaction scores through personalized advisory services
- Collaborated with product teams to align analytical insights with business objectives, developing KPI dashboards that reduced decision-making time by 35%

Junior Data Analyst | Softage Information, India

Aug 2017-Oct 2019

- Developed a machine learning model to predict product demand using historical sales, seasonality, and market trends, reducing stockouts by 15%, optimizing inventory levels, and improving overall operational efficiency by 10%.
- Utilized Pandas and NumPy for cleaning, transforming, and aggregating historical sales data, improving data accuracy by 95%, and enabling more precise demand forecasting, leading to a 25% reduction in data-related errors.
- Conducted exploratory data analysis (EDA) using Matplotlib and Seaborn to identify sales patterns, seasonality, and correlations, improving forecasting precision by 20%, resulting in a 12% increase in sales forecast accuracy.
- Applied statistical methods like ANOVA from SciPy to test hypotheses on demand factors, supporting decisions with a 98% confidence level, and improving data-driven decision-making by 30%.

EDUCATION:

Master of Science in Business Analytics - Southern New Hampshire University, Manchester, NH, USA . GPA-3.93

Bachelor of Electronics and Communication Engineering - Lovely Professional University, Jalandhar, Punjab, India. GPA-3.10
