PROFESSIONAL SUMMARY

Highly motivated **Full-Stack Java Developer** with **5+ years of experience** in designing and implementing scalable, high-performance applications. Proficient in **Java (8, 11, 17, 21)**, **Spring Boot**, **RESTful APIs**, **Python**, and modern front-end frameworks like **React** and **Angular**. Strong background in **AWS cloud architecture**, containerization with **Docker/ECS**, and distributed messaging platforms like **Apache Kafka**, **SNS**, and **SQS**. Skilled in **unit and integration testing**, **CI/CD pipelines**, and **Terraform/OpenTofu**. Experienced with modern **DevOps tools** (Docker, OpenShift, Kubernetes, Jenkins, CI/CD) and databases including **MongoDB**, **SQL**, **MySQL**, **PostgreSQL**. Proven experience contributing to **system architecture** and **design**, improving **performance** and **reliability**, and working in **Agile environments**. Proven ability to deliver high-quality solutions across the full software development lifecycle.

TECHNICAL SKILLS

- **Programming:** Java, Python, HTML, CSS, JavaScript, TypeScript
- **Frameworks & Libraries:** Spring Boot, Spring Framework, Spring AOP, Hibernate, Spring Data, Spring Webflux, Django, ReactJS, NodeJS, Angular, Bootstrap, Next.js
- **Databases:** PostgreSQL, MySQL, Oracle, SQL Server, MongoDB, Redis, Cassandra, Neo4j, DynamoDB
- **Web Services & APIs:** RESTful Services, SOAP, JSON, XML
- **Cloud Platforms:** AWS (Lambda, EC2, S3, Athena), GCP (Cloud Functions, BigQuery, Pub/Sub)
- **DevOps & Tools:** Docker, Kubernetes, OpenShift, Jenkins, GitHub Actions, CI/CD, Terraform, Prometheus, Grafana, Dynatrace
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, SNS, SQS, AWS Kinesis
- **Security:** OAuth2, Spring Security, OIDC, JWT
- **Testing & Monitoring:** JUnit, Mockito, Selenium, Postman, Playwright
- **Version Control:** Git, GitHub, GitHub Copilot, Bitbucket, GitLab
- **Other Tools:** IntelliJ, VS Code, Maven, Gradle, JIRA, Confluence, PowerShell, Shell Scripting

PROFESSIONAL EXPERIENCE:

Software Engineer
Citi bank - New York
Sep 2024 - Present

- Developed and maintained microservices using **Java Spring Boot**, deployed on **AWS ECS** with Docker containers.
- Built robust, reusable components using **Core Java (Streams, Collections, Generics)** and **Spring Boot**.

- Designed and implemented secure **RESTful APIs** with **Spring Boot**, used in internal financial services platforms and customer portals.
- Designed and implemented **RESTful APIs** using **Spring Boot**, enhancing code reliability and reducing defects by **25%**.
- Optimized **SQL Server** and **Oracle** queries and stored procedures using **Hibernate/JPA**, enhancing transaction performance.
- Identified performance bottlenecks in **Hibernate-based DAO layers**; optimized SQL queries for Oracle and reduced response time by **50%**.
- Contributed to modernization of legacy applications to microservices-based architecture using **Spring Boot**.
- Developed and deployed distributed **microservices** using **Java 11+**, **Spring Boot**, and **Spring Cloud** to build scalable backend systems for enterprise applications.
- Led the migration of a monolithic application to a **microservices-based architecture**, reducing deployment time by **50%** and improving system scalability.
- Architected microservices integrated with **Apache Kafka** and **Redis** for low-latency transaction processing and event sourcing.
- Implemented event-driven architecture using **Kafka**, **SNS**, and **SQS**, enabling near real-time processing for high-volume applications.
- Contributed to **ReactJS** frontends supporting dashboards for trading and compliance teams, improving usability and data visualization.
- Built full-stack web applications using **React** and **Node.js** to deliver intuitive, responsive user interfaces.
- Built responsive UI components using **React**, **HTML5**, and **Bootstrap** for internal dashboards.
- Developed **Python/Django**-based tools for regulatory data analysis, automating ETL jobs and improving report accuracy by **40%**.
- Implemented **parallel streams** for processing large datasets, reducing processing time and improving application performance.
- Utilized **GitHub Copilot** to accelerate development workflows, reducing boilerplate coding time by up to **30%** and improving overall productivity.
- Integrated **AI-assisted code completion** using GitHub Copilot within VS Code and JetBrains IDEs to streamline backend and frontend development.
- Successfully migrated legacy services to **cloud-native microservices** using **Spring Boot** and **AWS ECS**, improving system scalability by **40%**.
- Worked on modernizing legacy monolithic applications into containerized microservices using **Docker** and **Kubernetes on OpenShift**.
- Integrated **JWT-based authentication** with front-end applications built in **React**, passing and storing tokens securely using HTTP-only cookies or local storage.
- Implemented CI/CD pipelines with **Jenkins** and integrated **OpenShift** for container orchestration in hybrid cloud environments.
- Collaborated with DevOps and IT operations teams to monitor system performance using Dynatrace and Loki.

Environment: Core Java, Spring boot, Multithreading, Data Structures, Microservices, IntelliJ IDE, Spring Boot, REST APIs, Hibernate/JPA, Spring Cloud, Spring AOP, Postman, Apache Kafka, Redis, JUnit, Mockito, Python, PyCharm, SQL, MySQL, Oracle, Docker, Kubernetes, HTML, CSS, JavaScript, ReactJS, NodeJS, GCP, CI/CD, Jenkins, OpenShift, Git, GitHub.

Software Engineer
Elevance Health – Chicago, IL
Jan 2024 - Sep 2024

- Led development of cloud-native web applications using **Java (Spring Boot 3.x)** and **Angular** to support enterprise healthcare solutions.
- Implemented **RESTful APIs** using **Spring Boot** and **multithreaded** processors for real-time data aggregation.
- Tuned performance of data-heavy services using optimized **Java Collections** and concurrent data structures.
- Built **event-driven microservices** using **Apache Kafka** and **RabbitMQ**, enabling real-time claims processing and provider updates.
- Utilized **Optional class** to handle null values gracefully, reducing **NullPointerExceptions** and improving code quality.

- Deployed and managed applications on **Red Hat OpenShift**, integrating **Prometheus** and **Grafana** for observability and proactive monitoring.
- Improved security using **Spring Security** and OAuth2 for secure user authentication and role-based access control.
- Developed **REST APIs** using **Spring Boot** and integrated them with frontend **Angular** modules.
- Used **Angular JS** as a framework to create a Single Page Application (SPA) which can bind data to specific views and synchronize data with the server.
- Migrated critical monolithic claims system to **microservices architecture**, improving system resilience and reducing downtime.
- Implemented secure authentication and authorization workflows using **JWT** for stateless session management across microservices.
- Developed and deployed **microservices** using Spring Boot and AWS Lambda with API Gateway, enabling serverless execution and secure access control.
- Utilized **AWS services** (Lambda, S3, DynamoDB, Athena, Batch) to implement serverless functions for clinical data aggregation and storage optimization.
- Designed and developed RESTful APIs using **Spring Boot** and **Spring WebFlux** for real-time healthcare data exchange.
- Integrated real-time data workflows using S3, Athena, and DynamoDB for healthcare reporting systems.
- Over a year of experience with AWS technologies, including **Batch, S3, Athena, Lambda, Aurora DB and DynamoDB**, specializing in data workflow management, storage optimization, and serverless architecture.
- Containerized applications using **Docker** and orchestrated deployments with **Kubernetes**, leveraging **AWS** services (EC2, S3, Lambda) to reduce operational costs by **20%**.
- Integrated **CI/CD pipelines** using **DevOps**, driving efficient deployment across dev, QA, and production environments.
- Collaborated with product and DevOps teams in an **Agile** environment, accelerating release cycles by 15% while maintaining 95%+ test coverage with **JUnit/Mockito**.
- Collaborated with DBAs to optimize SQL queries and tune PostgreSQL performance.

Environment: Java 8, Multithreading, Data Structures, Java Collections, RESTful Web Services, SOAP Web Services, Hibernate, Spring Core, Spring Data, Spring MVC, Spring Batch, Spring Boot, IntelliJ IDE, Postman, Docker, Kubernetes, Angular 12, Jenkins, AWS EC2, EBS, S3, JSP, HTML5, CSS3, JavaScript, Oracle, Maven, Jenkins, GIT, JUNIT, log4J, JSON.

Software Developer
Lowe's – Charlotte, NC
Jan 2023– Dec 2023

- Developed **Spring-based web applications** using **Spring MVC** and **Spring JDBC**, focusing on modular and maintainable code.
- Developed backend features for inventory and order management systems using **Spring MVC**, **Spring JDBC**, and **Oracle DB**.
- Developed and maintained scalable backend services using **Java 8**, leveraging features like **Streams API**, **Lambda expressions**, and **Functional Interfaces** to write cleaner and more efficient code.
- Developed Web API's using **Java 8/J2EE**, **JSP**, **Servlets**, **JDBC**, **Spring**, **SOAP**, **REST**, **HTML**, and **XML**.
- Developed POJO objects and used Hibernate as the **Object-Relational Mapping (ORM)** tool to access the persistent data from SQL Server.
- Analysis, design, and development of Application based on J2EE using **Spring** and **Hibernate**.
- Applied **JPA/Hibernate** for ORM and implemented batch processing jobs for inventory and order management.
- Streamlined data flow with **Kafka** for near real-time updates on product availability and logistics.
- Developed **API services** for e-commerce platform, ensuring seamless integration between front-end and backend systems.
- Worked with **Kafka-based messaging systems** to handle real-time inventory and order processing.
- Built customer-facing UI features using **ReactJS**, **TypeScript**, and **Bootstrap**, enhancing site speed and responsiveness.

- Implemented RESTful APIs integrated with third-party vendors using **JSON** and **XML** payloads.
- Automated CI/CD pipelines using **GitHub Actions**, improving deployment consistency and reducing
- Deployed services using **Google Cloud Platform** (Cloud Functions, Pub/Sub, BigQuery) to support scalable and real-time analytics workloads.
- Utilized **Git** for version control, participated in regular code reviews and agile ceremonies.
- Worked on Initial **Spring and Maven** Configuration set for the Project Spring – Maven Framework.
- Support and maintenance of existing projects. (Review bugs and problems as assigned, diagnose, and fix them in an appropriate manner).
- Participated in Agile ceremonies, sprint planning, and **code reviews**, improving overall team delivery quality.

Environment: Core Java, Spring boot, Microservices, Spring MVC, Spring JDBC, IntelliJ IDE, REST APIs, Hibernate/JPA, Apache Kafka, Maven, Gradle, JSP Servlets, ORM, Postman, SQL, SQL Server, MySQL, Oracle DB, JSON, XML, JSON, ReactJS, Git, GitHub.

Software Developer

Modak Analytics – Hyderabad, India

May 2019 – Nov 2021

- Built and maintained data ingestion pipelines using **Java** and **Python**, supporting public health and census data platforms.
- Developed **multithreaded Java programs** for large-scale data processing and file ingestion tasks.
- Developed **SQL queries** for data retrieval, manipulation, and analysis, ensuring data integrity and performance.
- Developed multi-threaded Java components using **ExecutorService** and **Callable** to process large datasets in parallel.
- Built web applications using **Java, Spring MVC, Struts**, and deployed on Tomcat with XML/XSLT integrations.
- Supported QA and test automation teams by writing mocks and test drivers using **JUnit** and **Mockito**.
- Implemented ETL workflows for structured and unstructured data using **SQL** and **Python scripts**, achieving a 30% improvement in pipeline efficiency.
- Built internal tools using **Java/Spring and MongoDB** for data analytics platforms.
- Contributed to internal analytics dashboards using **HTML5** and **JavaScript**.
- Collaborated with senior engineers to refactor legacy modules into modular components, improving maintainability and scalability.

Environment: Core Java, Multithreading, OOPs, Data Structures, Design Patterns, Spring boot, IntelliJ IDE, Python, Django, REST APIs, Hibernate/JPA, SQL, MySQL, MongoDB, HTML5, CSS, JavaScript, Git, GitHub.

CERTIFICATIONS

• J.P. Morgan Chase – Software Engineering Virtual Experience

Completed a simulated software engineering project focused on real-world financial system use cases, including task prioritization, feature development, and data handling.

• Wells Fargo – Software Engineering Job Simulation

Gained hands-on experience with backend service development, database integration, and RESTful API design through an industry-specific job simulation.

• Hacker Rank – SQL (Advanced) Certification

Demonstrated proficiency in complex SQL queries, joins, aggregations, and performance optimization.

EDUCATION

Master of Science in Computer Science
Western Illinois University – Macomb, Illinois.

Jan 2022 – Dec 2023

Bachelor of Science in Computer Science
Jawaharlal Nehru University of Hyderabad – Hyderabad, Telangana.

July 2016 – Sep 2020

PROJECT HIGHLIGHTS

- **Healthcare Claims Modernization** (Elevance Health): Migrated legacy application to Spring Boot microservices on OpenShift; integrated with AWS services.
- **Banking Analytics Platform** (Citi): Developed GCP-based data pipeline with Kafka and BigQuery for real-time insights.
- **Retail Pricing Engine** (Lowe’s): Built C++ backend component integrated into Java microservice, reducing product pricing delays.
