Javascript, JQuery, Angular, React

Databases:

SQL Server 2012, XML

Tools / Platforms

Visual Studio,GIT, TFS, Moq,Nunit, PostMan restclient,Swagger

Project Details

Project	:	VehicleLinq
Client	:	Nissan
Project Type	:	Web Application
Environment	:	C#,.net Core web api 6, SQL server,Angular13
		Core EF, Microservices,Azure,github
Role	:	Lead Developer
Team Size	:	7

Domain : Finance
Duration : 08/2022 -01/2024

Responsibilities:

- Developed components and Server side logic using C# and Asp.Net Core MVC
- Team Leading and working as full stack developer, Mentoring juniors
- Developed angular components, services for ui as per business requirements.
- Azure servicebus, blob storage, appinsight, Logic app, functions used as per requirements.
- Developed multiple Microservices using .Net Core WEB API
- Developed functionalities with Azure cloud native as per business requirements.
- Participated in CodeReviews, Daily standups, Designing and architecture discussions.

Project Description:

VehicleLinQ application offers end-to-end software and services that support all of your indirect automotive lending and leasing needs, from application through vehicle disposition. Automotive Loan Origination System enables lenders to be more responsive to dealers and vehicle buyers. The Cloud-based solution is highly configurable with enhanced contract-funding data management controls that allow lenders to tailor their credit policy, pricing and procedures for indirect lending portfolios—while controlling and minimizing risk. Data integration between system components enables credit and funding support within a single platform, resulting in an enhanced user experience throughout the origination process.

Project : Dart IPC
Client : HP
Project Type : Web Application
Environment : C#.Net, .net Core WebApi, SQL server, EF, Linq
Role : Module lead
Team Size : 6
Domain : Ecommerce
Duration : 12/2020 -04/2022

Responsibilities:

- Team Leading and working as full stack developer, Mentoring juniors
- Contributes to Features/User stories for modules
- Optimized stored procs and enhancing application performance
- Working with the back-end developer in the process of building the RESTful API
- Developed multiple Microservices using .Net Core WEB API and Azure serviceBus

Project Description:

DART IPC (Deal Analysis Response Tool Imaging & Pricing Client) is a client-server based application used for MPS deal calculation, analysis and quotation including workflow approval process. Application divided into Dart IPC server and client. Some of the important functionalities are Dart Services, Reports, Workflow, pricing, quoting, Admin Tool.

Project	:	Medicision
Client	:	Medicision
Project Type	:	Web Application
Environment	:	Asp.net, C#,Sql Server, Wcf,
Role	:	Module Lead
Domain	:	Healthcare
Duration	:	04/2018 -07/2020

Responsibilities:

- Developed components and Server side logic using C#.Net and Asp.Net MVC
- Team Leading and working as full stack developer, Mentoring juniors
- Contributes to Features/User stories for modules
- Optimized stored procs and enhancing application performance
- Working with the back-end developer in the process of building the Wcf

Project Description:

Medicision is an ambulatory platform that provides healthcare organizations with clinical and administrative tools and services. Important modules are referral, Claims,reporting,admin,physician. [Medecision](#) is a digital care management company whose solutions and services are used by leading health plans and care delivery organizations to support more than 42 million people nationwide.

Project	:	GCM Pipeline
Client	:	Dell
Project Type	:	Web Application
Environment	:	Asp.net, C#,Oracle, Wcf,AngularJs
Role	:	Senior Developer
Team Size	:	4
Domain	:	Ecommerce
Duration	:	02/2016 -11/2017

Responsibilities:

- Developed components and Server side logic using C#.Net and WCF services
- Involved Production support and RCA for critical production issues.
- Involved in impact Analysis of Change Request and prepared statement of work
- Involved in the development of store procedure for the implementing the business logic in SQL Server 2012.
- Bug fixing seeing TFS bugs posted by QA Team or Clients.

Project Description:

The primary functionality of the application is to support Dell online & offline business globally, across all segments by processing the quotes & orders created in the upper stream of the purchase path, before sending them to the backend system for order fulfillment. The word "Pipeline" depicts the logical design of the system, where the order flows through the processing engine with a series of components lining up, forming the order processing logic.

GCM Pipeline exposes web services and publishes libraries in order to support client interaction and internal housekeeping operation.

Project	:	PrimeSuite
Client	:	Emids
Project Type	:	Web Application
Environment	:	Asp.net MVC, C#,SQL Server, WebServices,Javascript
Role	:	Senior Developer
Team Size	:	4
Domain	:	Healthcare
Duration	:	01/2015 -02/2016

Responsibilities:

- Developed components and Server side logic using C#.Net and Asp.Net MVC
- Involved in impact Analysis of Change Request and prepared statement of work
- Involved unit test automation with Nunit and moq
- Involved in the development of store procedure for the implementing the business logic in SQL Server 2012.
- Bug fixing seeing TFS bugs posted by QA Team or Clients.

Project Description:
