

Subrat

Email: subratbehera2721@gmail.com

Ph#: (469) 612-6590

Professional Summary:

- Over **6+ years** of hands - on experience in IT industry- Developing, Testing, Integrating, implementing web-based **Java/ J2EE applications (Full Stack Development)**.
- Hands on experience with **Java 8** features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- Experienced in developing **MVC** architecture using **JSP, Hibernate Framework and Spring Framework**.
- Experience in working on various **spring modules (Spring MVC and DAO)** along with Hibernate as the back - end ORM tool for implementation of persistence layer and mapping of **POJOs**.
- Experience in **Hibernate** and the **O/R mapping** to map Java domain objects with the database, **spring framework** to easily configure **J2EE** applications.
- Expertise in developing Web based Distributed and Front-End applications in a three-tier architecture using **J2EE, HTML5, bootstrap, Angular.JS, Ajax, JSP, CSS3 and JavaBeans**.
- Experience in developing **JAVA/J2EE** applications using **IDEs** such as **Eclipse and RAD**.
- Extensive experience in using **J2EE, JNDI, JMS, Web Services, JSP, spring, XML, Maven, JavaBeans, JDBC**.
- Experience in using various **J2EE Design Patterns** such as **Session Façade, Service Locator, DAO, DTO (Data transfer object), Value Object, Front Controller, Factory, Business Object, Value Object and Singleton**.
- Experience utilizing Java tools in business, Web, and client-server environments including **Java Platform Enterprise Edition (Java EE), Java Server Pages (JSP), spring, Java database Connectivity (JDBC) and Restful Web Services technologies**.
- Experience on **OOP (Objective Oriented Programming)** like Inheritance, polymorphism, Abstraction and Encapsulation.
- Hands-on experience with various Application servers and **Web servers (IBM WebSphere Application Server, WebLogic, JBoss, and Tomcat)** with wide variety of development tools like **IBM RAD, My Eclipse**.
- Experience in using Open-Source Frameworks **Log4J**.
- Good exposure and experience Expertise in Web Services architecture in **SOAP and WSDL using JAX-RPC**.
- Experience in writing **SQL queries, PL/SQL** stored procedures/functions etc. for relational databases like **Oracle 10g/9i/8i and SQL Server**.
- Rich experience in **agile** methodologies such as **extreme programming (XP), Scrum, waterfall model and Test-driven environment**.
- Strong experience in client interaction and understanding business application, business data flow and data relations from them.
- Committed to excellence, self-motivator, fast-learner, team player, ability to deal with people diplomatically and a prudent developer with strong problem-solving skills and communication skills.

Technical Skills:

Languages	Java (Java SE 6, Java SE 7, 8, 11, 17), SQL
APIs	JDBC, JMS, JNDI, JPA, JSF, JSTL, EJB, SOAP
Frameworks	Hibernate, Spring , Spring Boot, JSF
Scripting/GUI Tools	HTML 5, DHTML, DOJO, JSON, JavaScript, CSS 3, Angular 12/14
Application Servers	WebLogic, JBoss, Apache Tomcat, WebSphere
IDE	Eclipse 3.x, RAD, WebSphere Studio Application Developer (WSAD), NetBeans, JBuilder
Build and Test Tools	Maven, Junit
Databases	Oracle, SQL Server
Operating Systems	Windows XP, Sun Solaris, Red Hat Linux, UNIX

Professional Experience:

Client: Northern Trust Bank, Chicago, IL.

Duration: May 2024 – Till Date

Role: Full Stack Developer

Responsibilities:

- Involved in analyzing, and designing, proposing, and delivering solutions that are appropriate for the business and technology strategies.
- Involved in the analysis, design and development and testing phases of Software Development Life Cycle (SDLC).
- Developed **robust, high-performance Java applications** using **Java 17** ensuring **code quality** and adherence to **best practices**.
- Worked on new features of **Java 17**, including pattern matching for switch statements, sealed classes and interfaces, enhanced foreign function and memory API, and updates to the JDK libraries.
- Developed web based presentation using **AJAX** and implemented using **Spring MVC framework**.
- Designed, developed and maintained the data layer using **Hibernate** and performed configuration of **Spring Application Framework**.
- Designed and developed **Micro services** using **REST** framework and **Spring Boot** and used **Bootstrap** along with **Angular.js** in creating the Application.
- Responsible for writing micro services using Spring Framework with **Spring Boot integration**
- Implemented the persistence layer using **Hibernate** and configured **Hibernate** with **spring** to interact with the database.
- Involved in designing and developing the front end of the application using **Angular 14, Java script, AJAX, HTML5, CSS3**.
- Created **Type Script** reusable components and services to consume resistant's using component-based architecture using **Angular 14**.
- Used **Angular 14** Template Driven forms and Modern Driven (Reactive) forms to perform form validations both on server and client side.
- Worked on **Angular.JS**, which combines web applications with Model View Controller capability to make development and testing of code efficient.
- Implemented **JAVA multi-threading** and thread handling issues during application development.
- Involved in developing **Java APIs**, which communicates with the **Java Beans**.
- Used **XML** and **Java Architecture** for **XML Binding (JAXB)**, to map java classes to **XML** representation.
- Developed **JSP's** with Custom Tag Libraries for control of the business processes in the middle-tier and was involved in their integration.
- Developed many **JSP pages**, used **JSON plug-in** for asynchronous communication.
- Involved in implementation of enterprise integration with **Web Services and Legacy Systems** using **SOAP, and REST**.
- Wrote configuration files for injecting **EJBs, Service Impls** and **DAO** classes.
- Used **Log4J** for logging in the application, **Maven** tool to build and configure J2EE applications
- Developed complex **SQL join queries** for efficiently accessing the data.
- Involved in all phase of SDLC like requirement analysis, implementation and maintenance and have experience in **Agile and Scrum**.
- Involved in Unit integration, bug fixing, acceptance testing with test cases, Code reviews.

Environment: Java 17, Spring, Spring Boot, Hibernate, Micro services, REST, Bootstrap, AJAX, HTML5, CSS3, JavaScript, Angular 14, Node.JS, Java API's, Java Beans, XML, JSP, JSON, SOAP, REST, EJB, Log4j, Maven, SQL, Agile and Windows.

Client: Geico Insurance, Chevy Chase, MD.

Duration: Jan 2023 – Apr 2024

Role: Full Stack Developer

Responsibilities:

- Involved in business requirements drafted by the requirement analysts and translating such requirements to technical system specifications.
- Developing the **Java 11** code using AWS, Eclipse as IDE backend services in **Java** and Groovy strong experience in implementing Service oriented architecture and Web Services using SOAP, RESTFUL API's.
- Implemented modules using **Core Java APIs, Java** collection, **Java 8** (Streams), multi-threading, and object-oriented designs.

- Used **Spring/MVC** framework to enable the interactions between JSP/View layer and implemented different design patterns with **J2EE and XML** technology.
- Data Operations were performed using **Spring ORM** wiring with **Hibernate** and Implemented Hibernate Template and criteria **API** for Querying database.
- Configured **Spring Boot** properties to integrate with the Smart outage application along with **spring** initializes and bootstrapping the build configuration.
- Used **spring boot** to collecting the data from users and packaged the data as **JSON** distributed to applications.
- Responsible for implementing new enhancements and fixing defects using **Java, JSP, JSF, spring** and **Hibernate**.
- Developed Session beans which encapsulate the workflow logic and used **Hibernate** to access data
- Developed the application using **Eclipse as the IDE** and used eclipse standard/plugin features for editing, debugging, compiling, formatting, build automation, test case template generation, mutator/accessor code generation.
- Developed a web-based reporting for credit monitoring system with **HTML5, XHTML, JSTL** and **JavaScript**.
- Designed dynamic client-side JavaScript codes to build web forms and simulate process for a web application, page navigation using **Angular 12**.
- Created **Angular 12** components and implemented interpolation, input variables, Bootstrapping, NgFor, Component decorator, binding to the hidden property.
- Used the **DAO** Pattern and **spring framework** facilitated the integration and deployment of **DAO, JSP and XML**.
- Extensively used **XML** and Java Architecture for **XML** Binding (**JAXB**), to map java classes to **XML** representation.
- **Web Services (SOAP)** were developed and published using **JAX-WS and JAX-RS**.
- Developed **EJB MDB's** and message Queue's using **JMS** technology.
- Used **Log4j** to provide central logging facility, comes under singleton design pattern.
- Application server: Developed and Deployed **EJBs** and other Components in the **JBoss** Application Server.
- Involved in coding, code reviews, **JUnit** testing, Prepared and executed Unit Test Cases.
- Designed database and created tables, written the complex **SQL** Queries and **stored procedures** as per the requirements.
- Worked on an **Agile (Scrum)** Development Team to deliver regular updates to business team and project managers.
- Participated in day-to-day meeting, status meeting, strong reporting and effective communication with project managers and developers.

Environment: Java 11/8, Spring, Spring Boot, JSON, JSP, JSF, Hibernate, Eclipse, JAXWS, JAXRS, HTML5, CSS3, JavaScript, Angular 12, DAO, JSP, XML, EJB, JMS, Log4j, JBOSS, JUnit, SQL, Agile and Windows.

Client: Magellan Health, Phoenix, AZ.

Duration: Sep 2021 – Dec 2022

Role: Full Stack Developer

Responsibilities:

- Involved in the requirement gathering, analysis, design, development, and testing phases of Software Development Lifecycle.
- Implemented the **Spring MVC** framework by creating controllers, validators, models and request mappings for all the action URLs.
- Implemented the application using Spring Framework which is based on **Model View Controller** design pattern.
- Created Action classes and used **spring** related features like Validations and Action Messages.
- Used JavaScript and **spring** validation framework for performing front end validations.
- Used **Core Java** OOPS concepts (inheritance, polymorphism) in developing the code.
- Mapped and managed Object/table relationships in **Hibernate**.
- Involved in **Java multithreading** to cascade multiple changes on multiple records in only one transaction and developed a batch process framework.
- Performed Client side validations using **JavaScript**.
- Used **Angular.JS** to implement rich functionality in various pages: form validation, grid, search, sort, pagination, multi-selection, tags-input, advanced directives, authentication, server-side proxy, unit tests, cloud integration, slide pages, users switch etc.
- Used **Log4j** as logging framework to capture the log traces of applications in debugging the issues.
- Wrote **SQL queries** and stored procedures to interact with the DB.
- Interacted with users in case of technical problems and mentored the business users.

Environment: Java 8, spring, Hibernate, JavaScript, Angular.JS, Log4J, SQL and Windows.

Company: Infor Global Solutions, India.

Duration: May 2019 – Aug 2021

Role: Full Stack Developer

Responsibilities:

- Responsible for analyzing the user requirements and creating the Use-Cases.
- Utilized **Model-View-Presenter (MVP)** design pattern, decoupling view and presenter, in front-end development.
- Involved in writing and invoking the **Spring MVC** calls.
- Developed the application using **Java 8** and implemented its features like Lambdas Expressions, Time API, Streams, functional interfaces, collectors, default methods, type interfaces, and for each.
- Used **Eclipse** as **IDE** for development.
- Developed the Web Interface using **spring, HTML5, CSS3 and JavaScript**.
- Used **Hibernate** as **ORM** to persist data.
- Developed form classes of **spring Framework** to write the routing logic and to call different services.
- Used the **spring** controller component classes for developing the applications and used the struts application resources properties file for error codes, views labels and for Product Internationalization.
- **JavaBeans** were used to store in a number of different collections of "attributes". Each collection has different rules for the lifetime of that collection, and the visibility of the beans stored there. The Java Server Pages (JSP) Specification defines scope choices.
- Created an **XML** configuration file for **Hibernate** -- Database connectivity.
- Used **Log4j** as a logging tool.
- Created **JUnit** test cases using **JUnit framework** for doing Unit Testing for all of my deliverables.
- Actively participated in **daily SCRUM meetings** to produce quality deliverables within time.

Environment: Java 8, spring, Eclipse, Java Beans, JSP, XML, Hibernate, EJB, Log4j, JUnit, and Windows.
