

Sujitha Kamepalli

Full Stack Developer

Email: sujitha@careerattainment.com | Phone: +1 (817) 874 7327 | Location: Edison, NJ – 08817

SUMMARY

Full Stack Developer with 7+ years of expertise in building scalable web applications using Java, Spring Boot, React, and Angular. Proven experience in designing microservice architectures, implementing cloud solutions on AWS, and optimizing CI/CD pipelines. Strong background in developing responsive user interfaces and robust backend services. Adept at Agile methodologies, cross-functional collaboration, and delivering high-quality, business-critical software solutions. Combines deep technical knowledge with a focus on clean code, performance, and system reliability to drive successful project outcomes.

TECHNICAL SKILLS

Languages:	Java, J2EE, SQL, PL/SQL, JavaScript, TypeScript, Python, Shell Scripting
Front-End Technologies:	HTML5, CSS3, React.js, React Router, React Hooks, Redux, Angular, Angular Router, Rx.js, Next.js, Node.js, jQuery, NgRx, Bootstrap, Material UI, JSON, WSDL, DOM/SAX, XML
Frameworks:	Spring Boot, Microservices architecture, Spring Data JPA, Spring Cloud, Spring Framework Core, Spring Security, Spring Batch, Hibernate ORM, Spring AOP, Spring DAO, Spring IOC
Databases:	Oracle, MySQL, PostgreSQL, SQL Server, MongoDB, Redis, Cassandra, DynamoDB, Neo4j
Cloud & Containerization:	AWS (EC2, Lambda, S3), Azure, Google Cloud Platform, Pivotal Cloud Foundry (PCF), Docker, Kubernetes
Tools:	IDEs, Maven, Gradle, Datadog, EKS
Testing & Automation:	JUnit, Mockito, Selenium, Postman
Version Control & CI/CD:	GitHub, GitLab, Bitbucket, CVS, SVN, Jenkins
Operating Systems:	Windows, Linux, Unix
Additional Technologies:	RESTful APIs, SOAP, OAuth2, JWT, Micro Frontends, Kafka, WebSocket, Caching (Ehcache, Redis)

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer | Northern Trust | USA

Jul 2024 – Present

- Provided robust production support for a high-value financial platform, designing and maintaining scalable backend services with Spring Boot and Hibernate to securely process over \$250M in monthly assets.
- Secured all application endpoints and implemented critical business logic by developing and maintaining Spring Security filters for user authentication and authorization.
- Enhanced system reliability and deployment agility by leading the migration from a monolithic architecture to a microservices-based design, achieving 99% uptime.
- Improved frontend performance and user engagement by 25% by building dynamic user interfaces with React, optimizing components with lazy loading and efficient state management.
- Leveraged AWS CloudWatch for comprehensive log tracking and analysis, enabling rapid troubleshooting and reducing issue identification time during production incidents.
- Actively participated in Scrum ceremonies, collaborating with cross-functional teams to prioritize, develop, and deliver 5+ new enterprise features per quarter based on direct stakeholder input.

Full Stack Software Engineer | HCL | India

Aug 2021 – Nov 2023

- Engineered a full-stack Hospital Management System using Spring Boot and React, developing critical modules including Patient Registration, Electronic Health Records (EHR), and Billing, which streamlined administrative workflows by 25%.
- Developed a responsive and accessible single-page application (SPA) with React Router for navigation and React Hooks (useState, useEffect, useContext) for state management, creating an intuitive interface for medical staff.
- Built and consumed secure RESTful APIs to seamlessly integrate patient data across AWS RDS (PostgreSQL) and legacy systems, ensuring real-time data consistency for critical care modules and enhancing data reliability.
- Designed and deployed a scalable, HIPAA-compliant infrastructure on AWS, leveraging EKS for container orchestration, EC2 for application hosting, and S3 for secure medical document storage, achieving an excellent 99.95% uptime.
- Implemented comprehensive application performance monitoring and log tracking using DataDog, creating custom dashboards that provided real-time insights into user journeys and reduced mean-time-to-resolution (MTTR) for production issues.
- Architected a modular frontend with a reusable component library in React, utilizing Context API for global state management (e.g., user sessions, patient context) helped in accelerating UI development for new modules.
- Established a robust CI/CD pipeline using AWS CodePipeline and Docker to automate testing and deployment to the EKS cluster, enabling 30% faster release cycles for critical system updates and new feature rollouts.

Software Engineer | TCS | India

Aug 2017 – Aug 2021

- Developed a scalable, single-page E-commerce application using Java Springboot, Angular, and Angular Router for navigation, and RxJS for state management, creating a seamless user experience that increased conversion rates.
- Engineered dynamic, data-driven user interfaces for the product catalog and shopping cart modules using Angular Components, Directives, and reactive forms, improving site interactivity and reducing cart abandonment.
- Built a serverless backend for the checkout and order processing system using Java, AWS Lambda and API Gateway, ensuring high scalability during peak traffic and reducing operational costs by 30%.
- Implemented a robust CI/CD pipeline using AWS CodePipeline and CodeBuild, automating the testing and deployment of the Angular application to Amazon S3 and CloudFront, enabling daily feature releases.
- Optimized frontend performance and SEO by implementing lazy loading with Angular modules and server-side rendering, achieving a 45% improvement in Lighthouse performance scores and a 20% faster time-to-interactive.
- Designed and developed reusable Angular services and HTTP interceptors to manage all API communications, integrating with backend microservices for user authentication, product search, and recommendations.

EDUCATION

Master’s in Information Technology Project Management, St. Francis College, USA

Aug 2025

PUBLICATIONS AND CERTIFICATIONS

- Analysis of Secure Hash Algorithm (SHA-512) for Encryption Process (IEEE TASC, DOI: 10.1109/TASC.2023.3340648)
 - Certified AWS Developer Associate
 - Java Full Stack Certification
 - Project Management Professional PMP
- (In Progress)
