Professional Summary:

Security Consultant with 6+ years of experience in Privileged Access Management (PAM), specializing in CyberArk PAS (current v13.2) implementation, administration, and support. Expertise in CyberArk components (EPV, CPM, PSM, PSMP, PVWA), privileged account lifecycle management, disaster recovery, and security compliance. I am skilled in identity federation, SAML-based SSO, MFA integration, and automated credential management. Having a strong background in Active Directory, SIEM integration, and cybersecurity best practices.

Education:

Bachelor of Technology in Computer Science & Engineering

West Bengal University of Technology, Kolkata

Certifications: CyberArk Defender

Technical Skills:

- **PAM/IAM Tools:** CyberArk PAS (EPV, CPM, PSM, PSMP, PVWA)
- **Scripting & Automation:** PowerShell, Java, Python
- **Operating Systems:** Windows, Linux (NIX)
- **Databases:** MySQL, Oracle, DB2
- **Cloud & Security:** AWS IAM, Azure AD, GCP Security, SAML, MFA
- **SIEM & Monitoring:** Splunk, QRadar, ServiceNow Integration
- **Application Servers:** WebSphere, Apache Tomcat
- **Directory Services:** Microsoft AD, OpenLDAP, IBM TDS
- **DevOps & CI/CD:** Git, Jenkins, Ansible

Professional Experience:

DXC Technology-USA

Nov 2023 – Current

Security Analyst

- Installed, deployed, and maintained CyberArk components (EPV, CPM, PSM, PSMP, PVWA) in a hybrid environment.
- Managed day-to-day privileged access operations by handling user requests, executing custom scripts for account onboarding, and delivering on-call support to resolve incidents promptly.
- Discuss with the endpoint team to onboard the discovered account through the account discovery process.
- Developed automation using PowerShell and Python; leveraged RESTful API endpoints for bulk provisioning, safe membership management, and credential reconciliation to reduce manual intervention.
- Monitored audit logs from Vault ITA, CPM, PSM, and PVWA; integrated log data with SIEM platforms Splunk and QRadar for real-time security event monitoring and compliance auditing.
- Implemented multi-factor authentication protocols (SAML SSO, Ping MFA) to enforce strict access control, Zero Trust access, and system security.
- Setup Password Upload Utility to upload multiple password objects to the Vault. Performed Manage, Resume, and Release Privileged Credential using CyberArk Privileged Management.
- Executed quarterly disaster recovery drills; defined and validated RTO/RPO metrics for the CyberArk DR Vault to ensure high availability and operational resilience.
- Enhanced ITSM integration by optimizing ServiceNow workflows and automating ticket generation and incident response.
- Worked on monitoring backup solutions using CyberArk backup utility.
- Generated CyberArk out of the box and custom report as per firm requirements.

Hexaware Technologies-India

Jun 2014 - Oct 2016

CyberArk PAM Consultant

- Deployed and configured CyberArk Vault, DR Vault, and PAS components within a high-availability cluster, ensuring robust business continuity.
- Developed and maintained automation scripts for mass provisioning, safe membership management, and account property updates using RESTful APIs, minimizing manual processes.
- Authored technical documentation (HLD, LLD, KDD) and led cross-functional workshops to standardize the onboarding of privileged accounts across Windows, Linux, and Oracle systems.

- Integrated CyberArk with SIEM platforms Splunk and QRadar to enable continuous log aggregation, security event monitoring, and proactive threat detection; worked with SOC to streamline incident response.
- Implemented security hardening measures by updating Domain GPOs, Windows server policies, AppLocker configurations, and ACLs to mitigate vulnerabilities and comply with IT security standards.
- Managed daily CyberArk operations, including account lifecycle events, policy updates, safe membership modifications, password rotations, and reconciliation; provided focused training to end users and support staff.
- Managing Master policy and platform exception as per the Cyber requirement. Worked on platform-level CPM and PSM policy settings.
- Investigated and fixed CPM password management and PSM remote desktop-related issues in the production environment.
- Manage licenses in CyberArk vault through PrivateArk client.
- Utilized custom REST API integrations to automate administrative tasks and enforce compliance with internal security protocols.
- Work with CyberArk vendor support team to analyze and fix product-related issues.

Mphasis- India

Jun 2012- May 2014

Security Consultant

- Developed and executed strategies for platform, safe, and account naming conventions to support standardized identity governance and automated provisioning.
- Collaborated with business and cybersecurity teams to define, enforce, and audit global security policies; generated detailed operational, audit, and compliance reports while managing password inventories.
- Configured and managed privileged accounts across Domain, Windows, UNIX, databases, network devices, and security appliances, ensuring secure integration with CyberArk in both on-premises and cloud environments.
- Designed and executed automation scripts for bulk password management and reconciliation, enhancing operational efficiency and minimizing errors.
- Configured Active Directory Mapping in CyberArk to streamline user management via AD group and enforce strong Role back access control.
- Coordination between the offshore support team and the onsite engineering team to address technical or business requirements-related queries and handover.
- Administration experience of CyberArk Vault with Safe creation, integration with LDAP, and other authentication methods.
- Delivered training sessions and produced detailed SOPs, runbooks, and user guides to support the onboarding and lifecycle management of privileged accounts.
- Maintained comprehensive backup and restore processes for CyberArk systems.
- Worked on creating and maintaining Epic, stories, and tasks in the Azure board for the entire project.
- Supported end users with access, account permission, and server login-related issues.
