

Tangmoh Tonka

AZURE SQL ADMINISTRATOR | MS SQL DBA

Richmond, Texas 77406 | Tel.: 956-622-9695 | E-Mail: tangmo.tonka@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

SQL Server and Azure Database Administrator with over 9 years of experience managing, optimizing, and securing large-scale database environments across on-premises and cloud infrastructures, including 3 years of hands-on Azure Cloud expertise. Proven success in designing and implementing high availability (AlwaysOn, Mirroring, Log Shipping, Clustering) and disaster recovery solutions that ensure business continuity. Skilled in performance tuning, automation, and cloud cost optimization to drive operational efficiency and reduce downtime. Experienced in database migrations to Azure, managing Azure SQL Databases, Managed Instances, and Elastic Pools, and implementing security best practices using Azure Active Directory and Multi-Factor Authentication. Recognized for leading end-to-end database modernization projects, mentoring teams, and ensuring adherence to corporate database governance standards in 24/7 production environments.

SKILL OVERVIEW

SQL Server | SSAS | SQL Replication | SQL Server Integration Services | Technical Documentation | Metrics Communication | SQL Server Monitoring | Inbuilt | Reporting | Database Mirroring | Log Shipping | Replication | Traditional Failover Clusters | Data Warehouse | PowerShell | Azure Cloud | T-SQL Scripts | Procedure Documentation | SSIS | SSRS | RDBMS (Relational Database) | IT | Microsoft | Data Extraction | HTML | Data Migration | Disaster Recovery | Performance Tuning | Log shipping | Team Leadership | Agile lead | Scrum Master | Microsoft Office | Extract, Transfer, Load (ETL) | Azure Active Directory | Domain Services | Azure Security Center | Azure Governance | Security | MFA, Authorization | B2C | Data Privacy, Identity and Access Management (IAM) | Key Management | Access Controls and Security Protocols | High Availability Solution- Clustering | Always On | Database Mirroring and Log Shipping | DBA support and technical expertise for multiple applications | SQL 2005 – 2022 Experience | Experience with large databases | Production level support for onsite and offshore - On Call 24/7 environment

TOOLS

Jira | ServiceNow | Redgate | DDBOOST | Idera Diagnostic Manager | Solar Winds (DPA) | Avamar | VMWare | Hyper-V | vSphere | Data Migration Assistant | Visual Studio | Azure Data Studio | Azure Storage Explorer | SSDT | SSMS | Sentry one | Spotlight | Query Store | SQL Profiler | Extended Events | Azure blob storage | ARM templates | Data Migration Expert | Rally | Cohesity | Confluence | AzureDevOps

EDUCATION

- Bachelor of Science in Accounting (2014)
- Bachelor of Science in Management (2007)

PROFESSIONAL EXPERIENCE

SQL Server Database Administrator / MS Azure DBA

Reworld | Nov 2023 – Present

Key Achievements:

- Led the migration of standalone NT servers to VMware, cutting licensing and hardware costs by \$250K annually.
- Deployed and managed Azure SQL Databases, Managed Instances, and Elastic Pools, improving scalability and reducing monthly spend.

- Implemented Always On Availability Groups, Mirroring, and Log Shipping, achieving 99.99% database uptime across production systems.
- Configured Azure Active Directory authentication and MFA, strengthening access security and compliance.
- Automated daily DBA operations using PowerShell and T-SQL scripts, reducing manual workload by 40%.
- Optimized performance with SQL Profiler, Query Store, and Extended Events, decreasing query execution time by 30%.
- Executed end-to-end database migration from on-premises SQL Server to Azure Cloud, ensuring zero data loss during transition.
- Built and configured Windows Failover Clusters to support high availability and disaster recovery solutions.
- Created and optimized Tables, Stored Procedures, Views, Indexes, and Triggers to enhance query performance.
- Troubleshoot and resolved database access and performance bottlenecks, minimizing downtime.
- Mentored junior DBAs on migration best practices and SQL Server administration **procedures**.
- Monitored and tuned elastic pools in Azure, right-sizing resources to lower cloud consumption costs.
- Mentored junior DBAs and enforced corporate database standards, improving operational consistency and team performance.

Database Administrator

Oracle Inc | Aug 2021 – Nov 2023

Key Achievements:

- Configured Always On Availability Groups, Mirroring, and Log Shipping to ensure high availability for critical Oracle and SQL Server databases.
- Led migration and integration of SQL Server databases with Oracle environments, improving cross-platform data access and reliability.
- Provisioned and managed Azure and AWS cloud databases, optimizing resource utilization and reducing cloud spend by 20%.
- Implemented backup, restore, and disaster recovery strategies across Oracle, SQL Server, and cloud platforms, ensuring zero data loss.
- Automated repetitive DBA tasks using PowerShell and SQL scripts, improving operational efficiency by 35%.
- Monitored performance of SQL Server and Oracle databases using Query Store, Extended Events, and Oracle Enterprise Manager, reducing query latency by 30%.
- Managed standby databases and cross-cloud replication to ensure seamless failover and business continuity.
- Applied Azure AD and AWS IAM security policies, strengthening database access control and compliance.
- Deployed and managed AWS RDS instances and Azure SQL Managed Instances, enabling hybrid cloud scalability.
- Mentored junior DBAs in cross-platform database administration and cloud best practices, improving team productivity and knowledge sharing.

MS SQL Server Database Administrator

Cognizant | Oct 2018 – Jul 2021

Key Achievements:

- Installed and configured SQL Server 2008–2017 across development, test, and production environments.
- Developed detailed installation, clustering, and patching documentation for operational continuity.
- Improved system reliability through automated DBA monitoring and maintenance scripts.
- Ensured 24/7 production database stability, resolving incidents promptly to minimize downtime.
- Designed and executed backup and restore strategies, ensuring recoverability of large databases.

- Configured Database Mail and Operators to automate alerting and incident response.
- Conducted capacity planning and resource allocation, preventing storage and performance bottlenecks.
- Implemented HA/DR monitoring routines to maintain seamless database failover readiness.

MS SQL Server Database Administrator

Nextier | Feb 2016 – Sep 2018

Key Achievements:

- Installed, configured, and maintained SQL Server 2008–2016 on production and development servers.
- Designed and implemented Always On, Mirroring, and Log Shipping solutions to support high availability.
- Created comprehensive technical documentation for installation, clustering, and patch management.
- Automated DBA maintenance tasks using T-SQL and PowerShell, reducing manual workload by 35%.
- Developed and executed backup, recovery, and disaster recovery procedures, improving data resiliency.
- Monitored standby databases and replication health, ensuring failover readiness in 24/7 environments.
- Collaborated with development teams to optimize stored procedures, indexing, and query performance.
