

Teka Kahs

Sr. QA Automation

Profile

Experienced Sr. QA Automation professional with 7+ years of Automation Software Testing expertise. Skilled in Agile Scrum methodology, diverse software testing, and hardware configurations. Proficient in Automation testing with Cypress and Selenium WebDriver, utilizing TestNG. Experience in Continuous Integration/Continuous Development testing with Maven, Jenkins, and GIT. Familiar with CSS Selectors, Xpath expressions, and Apache POI for test data. Proficient in building automated test frameworks using Selenium WebDriver, TestNG, Cucumber with BDD, Maven, and Page Factory. Skilled in Object-Oriented Programming (OOP) with Java, including Inheritance, Polymorphism, Encapsulation, and Abstraction. Experienced in Cypress for JavaScript-based automation and Jenkins for unattended test execution.

Employment History

Sr. QA Automation at Target

July 2022 — February 2025

- Analyze business requirements and features to develop comprehensive test plans, test steps, and test cases.
 - Develop and test various test plans and scenarios in TestRail, with a focus on Device Management and Media Management areas.
 - Maintain and enhance an automated test framework utilizing Cypress and implementing the Page Object Model.
 - Execute multiple types of testing including Smoke, Functional, Integration, System, User Acceptance, Regression, Positive, Negative, and GUI testing.
 - Implement the Page Object Model approach using Page Factory elements, and automate tests with Cypress, JavaScript, Cucumber, TestNG, and Maven.

Marshal, Massachusetts, MA at QA Automation

June 2019 — June 2022

- Develop and maintain Selenium test scripts for flexible adaptation to dynamic environments.
 - Generate comprehensive project reports to document specifications and activities.
 - Collaborate in software development and testing life cycles, employing Selenium RC/Web driver, JMeter, and SOAP UI.
 - Automate regression tests using Selenium WebDriver, Jenkins, and UDeploy to streamline testing processes.
 - Implement JavaScript for automating Backend Rest Service layer and configuring environments in Jenkins for seamless test execution.

QA Engineer at AT&T

August 2016 — May 2019

- Engage in STLC and SDLC processes actively.
 - Utilize various testing methods such as functional, regression, and integration testing.
 - Create comprehensive test cases based on prototypes, technical specs, and requirements.
 - Develop test cases for each release using HP QTP/HP UFT scripts.
 - Perform functional testing, GUI testing, and Black Box Testing using QTP.
 - Collaborate closely with developers to resolve issues during testing.
 - Generate test plans, problem reports, status reports, and final test summaries.
 - Execute SOAP-based web services for API testing using Java client and SoapUI.
 - Validate transactions and perform SOA testing for Payments API.
 - Execute test sets in QTP to verify interdependency of application modules.
