

THALAIMUTHU PANDIAN PANNEERSELVAM

SUMMARY

Results-driven IT Professional with 18 years of experience in Web, Windows, and Service-oriented application development using Visual Studio .NET. Proven expertise in application development, maintenance, and support across various platforms. Skilled in architecting robust systems that align with client requirements while adhering to technical standards. Strong leadership experience, with a track record of managing high-performing development teams to achieve both interpersonal and organizational objectives. Exceptional communication skills, with the ability to effectively engage and collaborate with stakeholders at all levels to ensure project success and client satisfaction.

EDUCATION

MASTER OF COMPUTER APPLICATIONS

Annamalai University, India.

2003-2006

BACHELOR OF SCIENCE (INFORMATION TECHNOLOGY)

Bharathidasan University, India.

2000-2003

TECHNICAL SKILLS

Web Technologies & Frameworks:

- ASP.NET Core, Angular, Bootstrap, Blazor, ASP.NET MVC, HTML, CSS, JavaScript, AJAX, jQuery

Programming Languages:

- C#, T-SQL, Visual Basic .NET, Visual Basic 6.0

Service-Oriented Architecture:

- Web API, WCF, Web services, JSON, UDDI

Databases & Tools:

- MS SQL Server, IBM DB2, MS Access, Win SQL

ORM & Data Access:

- EF Core, Dapper ORM, ADO.NET, LINQ

Structural Design Patterns:

- Dependency Injection, Inversion of Control (IoC)

Version Control & Source Code Management :

- Azure DevOps, Team Foundation Server, Bitbucket, Tortoise SVN, IBM Rational ClearCase, Borland StarTeam

DevOps & CI/CD Tools:

- Jenkins, Octopus Deploy, Atlassian JIRA

Testing & Quality Assurance:

- X-Unit, Postman, Unit Testing

WORK HISTORY

CONDUENT STATE HEALTH CARE LLC

APP DEV & SUPPORT ENGINEER III

May 2021 - Till date

COGNIZANT TECHNOLOGY SOLUTIONS

SENIOR ASSOCIATE

December 2010 – April 2021

FIRE STREAM WORLDWIDE INC

MODULE LEAD

January 2007 – December 2010

PROJECT PROFILE

CONDUENT STATE HEALTH CARE LLC

Conduent is a leading provider of mission-critical services and solutions, partnering with businesses and governments to deliver exceptional outcomes for clients and the millions of individuals who depend on them. By leveraging dedicated teams, advanced processes, and cutting-edge technologies, Conduent enhances customer experience, increases operational efficiencies, reduces costs, and drives performance improvements. Serving most Fortune 100 companies and over 500 government entities, Conduent is committed to transforming the way organizations engage with their customers and achieve business success.

Project Title	Home and Community Based Services
Duration	May 2021 - Till date
Work Location	Ball Ground, GA, USA
Technologies Used	Asp.net, C#, SQL 2019, WCF, Web API, Swagger, ADO.NET, Windows Service, JavaScript, Ajax, XML, Azure DevOps.
Role	Senior Application Development and Support Engineer

PROJECT DESCRIPTION:

The **Home and Community-Based Services (HCBS) application** is a web-based platform designed to streamline the screening, assessment, and authorization process for a variety of services. Its goal is to enhance the quality of life for participants by improving the efficiency of assessments and care planning to better meet individual needs. The HCBS application features a web portal and mobile

application that enables stakeholders to easily facilitate access to services for participants, ensuring seamless coordination and delivery of care.

RESPONSIBILITIES:

- Participated in business and functional requirements gathering sessions and contributed to documentation efforts.
- Analyzed requirements and translated them into design specifications.
- Developed and maintained the code base, managed task tickets, and resolved defects in TFS.
- Provided defect resolutions and conducted demos to the QA team for validation and testing.
- Designed and developed web pages using ASP.NET and created WCF, Web, and application tier code in C#.
- Conducted peer code reviews to ensure code quality and adherence to best practices.
- Supported deployments and ensured smooth integration and delivery of software updates.
- Fine-tuned stored procedure performance by analyzing execution plans and optimizing queries for better efficiency.
- Created and managed SQL Server builds to ensure smooth database deployments and updates.
- Resolved application issues and conducted thorough root cause analysis to identify and address underlying problems.

COGNIZANT TECHNOLOGY SOLUTIONS

Cognizant Technology Solutions is a global IT services and consulting company that helps businesses with digital transformation, technology solutions, and business process services. Headquartered in Teaneck, New Jersey, Cognizant provides services such as application development, cloud computing, AI, data analytics, and IT consulting. It serves a variety of industries including healthcare, finance, manufacturing, and retail. Known for its innovative solutions and strong global presence, Cognizant helps companies enhance their digital capabilities, improve operational efficiency, and drive business growth.

Project #1:

Project Title	Agents Commission system
Duration	August 2019 – April 2021
Work Location	Montgomery, AL, USA
Technologies Used	C#, IBM DB2, WIN SQL, ADO.NET, Dapper ORM, X-Unit, Bitbucket, Jenkins, Octopus Deploy.
Role	Technical Lead

PROJECT DESCRIPTION:

An **Agents Commission System** is a software solution designed to manage and calculate the insurance commissions earned by agents based on their sales or performance. It tracks sales data, calculates commissions according to predefined rules, and ensures accurate payments to agents. It aims to streamline the commission process, improve transparency, and reduce manual errors, ultimately helping businesses efficiently manage their relationships with agents.

RESPONSIBILITIES:

- Created and configured the development environment and established the code base for the team to ensure efficient collaboration and smooth workflow.
- Analyzed the existing Commission system to understand its architecture and identify areas for improvement.
- Converted legacy mainframe COBOL programs and JCL to C#.NET to modernize the system and improve performance.
- Developed the DB2 data layer using Dapper ORM to facilitate efficient database interactions and improve data access performance.
- Performed unit testing to ensure code quality and functionality and provided support during deployments to ensure smooth integration.
- Supported process audit activities by ensuring compliance with internal standards and requirements.
- Provided guidance and mentorship to team members, offering technical expertise to enhance their skills and ensure project success.

Project #2:

Project Title	Coop Reimbursement Automation
Duration	August 2018 – April 2021
Location	Montgomery, AL, USA
Technologies Used	ASP.NET Core, C#, Web API, SQL 2012, EF Core, X-Unit, Jenkins, Octopus Deploy, Bitbucket.
Role	Technical Lead.

PROJECT DESCRIPTION:

The **Coop Reimbursement application** automates the entire process of submitting, reviewing, and approving reimbursement requests. It aims to streamline the efforts of all resources involved, ensuring that the workflow is efficient and effective. By automating these tasks, the application reduces manual intervention, minimizes errors, and speeds up the approval process. This leads to faster reimbursements, better resource management, and improved overall efficiency for organizations handling reimbursement requests.

RESPONSIBILITIES:

- Actively participated in requirement gathering sessions to understand business needs and project goals.
- Conducted requirement analysis and created high-level design documents using Confluence and JIRA tools for clear communication and project tracking.
- Transformed requirements into technical designs and implemented them using Visual Studio .NET.
- Developed .NET code and SQL queries to ensure functional and optimized system performance.
- Performed peer code reviews to ensure code quality and consistency before integration into SVN.
- Deployed builds to lower environments using Jenkins and Octopus Deploy, ensuring smooth transitions throughout the development lifecycle.

Project #3:

Project Title	Home and Community based services
Duration	April 2013 – August 2018
Location	Richmond, VA, USA
Technologies Used	Asp.net, C#, SQL 2012, WCF, ADO.NET, Windows Service, Java script, Ajax, XML, TFS.
Role	Senior Developer.

PROJECT DESCRIPTION:

The **Home and Community-Based Services (HCBS) application** is a web-based platform designed to streamline the screening, assessment, and authorization process for a variety of services. Its goal is to enhance the quality of life for participants by improving the efficiency of assessments and care planning to better meet individual needs. The HCBS application features a web portal and mobile application that enables stakeholders to easily facilitate access to services for participants, ensuring seamless coordination and delivery of care.

RESPONSIBILITIES:

- Analyzed business requirements and translated them into technical designs and implementation plans.
- Established and managed the code base, while tracking task tickets and resolving defects in TFS to ensure smooth project execution.
- Provided defect resolutions and presented demos to the QA team for validation and testing.
- Designed and developed web pages using ASP.NET, implemented WCF, and Data layer code in C# to meet system requirements.
- Conducted peer code reviews to ensure adherence to best practices, code quality, and project standards.

- Supported build deployments, ensuring smooth integration and transition between development and production environments.
- Actively participated in process audit activities to ensure compliance with internal standards and improve system performance.

Project #4:

Project Title	Net Positive Upload
Duration	July 2012 – Feb 2013
Location	Chennai
Technologies Used	C#, Asp.net, SQL 2005, WCF, IBM Rational ClearCase.
Role	Senior Developer.

PROJECT DESCRIPTION:

NET Positive Upload is an application designed to serve as an interface between NETPositive and AS400. NETPositive is a third-party tool used by agents to create policies for various types of insurance, including Non-California Auto, Watercraft, Motorcycle, Membership, and Property. When agents create policies using NETPositive, the policy information is transmitted as an XML string to the Upload Web Service. This web service processes the data and stores the policy details in SQL Server. Subsequently, ZapApp applications retrieve these policy details from SQL Server and upload them to AS400, ensuring seamless integration and data transfer between the two systems. The application streamlines the policy creation and transfer process, improving efficiency and accuracy in handling policy data.

RESPONSIBILITIES:

- Re-architected the legacy NET Positive Upload application to improve scalability, performance, and maintainability.
- Migrated the web service functionality to WCF (Windows Communication Foundation) to enhance communication between systems and provide better integration support.
- Converted existing business logic code to .NET 4.0, ensuring compatibility with modern frameworks and improving system efficiency.

Project #5:

Project Title	TEC PMO
Duration	Apr 2012 – Jun 2012
Location	Chennai
Technologies Used	C#, Asp.net, SQL 2008, TFS.
Roles	Lead Developer.

PROJECT DESCRIPTION:

The **TEC PMO (Toyota Engagement Centre Project Management Office)** is a tool developed for Directors, Managers, and Senior Associates to view detailed insights on vertical-wise revenue, profit, and FTE (Full-Time Equivalent) data. The application allows users to generate and view various reports, such as staffing details, revenue productivity, and profitability by account, on both monthly and yearly basis. Additionally, the system provides functionality to export these reports in Excel format, enabling efficient data analysis and decision-making. The TEC PMO helps streamline the tracking and reporting process for key business metrics, improving operational visibility and performance management.

RESPONSIBILITIES:

- Analyzed functional requirements and translated them into technical designs to ensure alignment with business objectives.
- Estimated development efforts and communicated progress and potential risks to the project manager.
- Designed and developed web pages using ASP.NET and implemented web and application-tier code in C# to meet project requirements.
- Developed stored procedures and user-defined functions in SQL to optimize database performance and support business logic.
- Supervised and provided guidance to team developers, ensuring the quality and timely delivery of tasks.
- Mentored new team members, offering technical guidance and support to help them understand project requirements and coding best practices.

Project #6:

Project Title	Toyota DMS Integration Portal
Duration	Apr 2011 – Mar 2012
Location	Chennai
Technologies Used	C#, Asp.net, SQL 2008, TFS.
Roles	Lead Developer.

PROJECT DESCRIPTION:

The Toyota DMS Integration Portal (TDIP) is a platform that enables users to manage and track functional, technical, and general clarification requests related to any interface. Users can log their clarifications onto the technical specifications shared by TMS (Toyota Management System) directly within the portal. TDIP facilitates the exchange of critical information between DMS Service Providers, Dealers, and TMS, ensuring smooth communication and efficient resolution of queries.

The portal streamlines the clarification process, improves collaboration, and ensures accurate data sharing across the stakeholders, enhancing the overall integration experience.

RESPONSIBILITIES:

- Analyzed functional requirements and converted them into detailed technical designs to align with business objectives.
- Estimated development efforts and regularly reported progress, challenges, and risks to the project manager.
- Designed and developed web pages using ASP.NET and implemented web and application-tier code in C# to meet project specifications.
- Developed stored procedures and user-defined functions in SQL to optimize data processing and support business logic.
- Supervised and managed the work of team developers, ensuring tasks were completed on time and according to quality standards.
- Mentored and provided technical guidance to new team members, fostering skill development and ensuring alignment with project goals and best practices.

Project #7:

Project Title	Asset Management
Duration	Nov 2011 – Jan 2012
Location	Chennai
Technologies Used	C#, Asp.net, SQL 2005, TFS.
Roles	Senior Developer.

PROJECT DESCRIPTION:

The Asset Management application enables users to update and manage key facility details, such as office addresses, on-call personnel, floor plans for each floor, and room-specific information. The primary function of this application is to allow regional Service Providers to efficiently manage asset assignments within their respective offices, ensuring that all assets are accurately tracked and allocated across different locations.

RESPONSIBILITIES:

- Designed and developed web pages using ASP.NET, implemented web and application-tier code in C#.
- Created stored procedures and user-defined functions in SQL to enhance data processing and functionality.
- Provided support for build deployment across multiple environments, ensuring smooth transitions and integration.

- Optimized and fine-tuned the performance of legacy stored procedures, improving query efficiency and overall system performance.

Project #8:

Project Title	Dealer Daily
Duration	Dec 2010 – June 2011
Location	Chennai
Technologies Used	C#, Asp.net, SQL 2005, TFS.
Roles	Senior Developer, Production support, DBA.

PROJECT DESCRIPTION:

Dealer Daily is an integrated Dealer Management System (DMS), and Dealer Communication System (DCS) designed to streamline dealership operations. This web portal enables dealers to efficiently manage all aspects of their business, from factory communications to online forms and diagnostic services. It offers a range of business, service, and marketing tools, all accessible from a single workstation. By integrating various components into one cohesive application, Dealer Daily supports all dealership applications, simplifying workflows and enhancing operational efficiency.

RESPONSIBILITIES:

- Resolved application issues and conducted thorough root cause analysis to identify and address underlying problems.
- Created and managed SQL Server builds to ensure smooth database deployments and updates.
- Provided support for database documentation and handled ad-hoc SQL requests to meet business requirements.
- Managed and resolved critical SQL-related issues, ensuring the stability and performance of the database.
- Maintained SQL jobs and ensured their proper execution to support business processes.
- Fine-tuned stored procedure performance by analyzing execution plans and optimizing queries for better efficiency.

FIRESTREAM WORLDWIDE INC (PDI TECHNOLOGIES).

FireStream Worldwide Inc is a software and technology company specializing in the midstream and downstream petroleum industries. The company partners with a wide range of clients, including elite petroleum wholesalers, c-store chains, transport fleets, cardlock operators, and metered fuel delivery companies. FireStream helps these organizations streamline operations, improve efficiency, and maximize profitability by automating industry's best practices. With a strong focus on midstream and downstream markets, FireStream develops cutting-edge, industry-specific software solutions that serve clients across all 50 states and Canada. FireStream was acquired by PDI Technologies in April 2017.

Project #1:

Project Title	Wet-hose office Software
Duration	Nov 2007 – Dec 2010
Location	Chennai
Technologies Used	VB.NET, SQL Server 2005, NSIS and Crystal Report 11, StarTeam.
Roles	Module Lead.

PROJECT DESCRIPTION:

Wet hose office software Product developed for petroleum wholesale and retail industry. It automates dispatching, delivery and reporting functions involved in the wholesale and retail delivery of petroleum products by both metered and non-metered delivery vehicles. It also allows the customers to manage their clients, suppliers, Products, trucks, routes, orders and inventory details.

RESPONSIBILITIES:

- Gathered requirements from onsite and performed analysis.
- Designed WinForms user interface using VB.NET.
- Developed VB.NET coding, windows services and Crystal reports.
- Performed unit testing, handled defects and provided resolution.
- Created MSI build using NSIS and supported deployment.

Project #2:

Project Title	Ascend Tax Filing Module
Duration	Apr 2007 – Nov 2007
Location	Chennai
Technologies Used	C#, SQL Server 2005, Crystal Report 11, StarTeam.
Roles	.NET Developer.

PROJECT DESCRIPTION:

Tax Module application developed to file taxes in EDI Format. It also allows clients to retrieve transactional data from the database based on a date range.

RESPONSIBILITIES:

- Designed user interface in Visual studio .NET.
- Created crystal reports, SQL stored procedures and user defined functions.
- Developed C# code and performed unit testing.
- Maintained code base and tracked issues in StarTeam.

Project #3:

Project Title	Equipment Tracker
Duration	Jan 2007 – Apr 2007
Location	Chennai
Technologies Used	VB.NET, SQL 2005, Crystal Report 11, StarTeam.
Roles	Developer Trainee, .NET Developer.

PROJECT DESCRIPTION:

Equipment Tracker developed for managing and tracking the storage tanks, trucks and lubricant pumps. It keeps track of loaned and leased equipment. It also maintains schedules, asset depreciation data and generates agreements.

RESPONSIBILITIES:

- Migrated VB6 modules to VB.NET.
- Designed a new user interface in Visual studio .NET.
- Created crystal reports and SQL stored procedures and user defined functions.
- Developed VB.NET code and performed unit testing.
- Maintained code base and tracked issues in StarTeam.
