SUMMARY

- 16+ years of experience as a **Senior Java Developer / Full Stack Developer** in designing, developing, and deploying scalable, secure, and high-performance web and enterprise applications.
- Expertise in **Java/J2EE, Spring Boot, Microservice, Kafka, Struts, Hibernate, JSP, Servlets, JDBC, JNDI** for enterprise-grade application development.
- Extensive experience in **front-end development** using **JavaScript, React.js, Angular, HTML5, CSS3, Bootstrap, jQuery**, and **Flex** for creating responsive, user-centric interfaces.
- Proven track record in developing and consuming **RESTful and SOAP APIs** using **Spring MVC, Web Services, JAXB**, and tools like **SoapUI**.
- Skilled in building scalable **microservices architectures** and asynchronous communication with **Apache Kafka, AWS**, and **JBPM** for business process management.
- Deep experience working with **relational** and **NoSQL databases** such as **Oracle, PostgreSQL, MySQL, SQL Server, DB2**, and **MongoDB** using **Hibernate, JPA, iBatis**, and **MyBatis**.
- Cloud-native application deployment experience using **AWS** services: **EC2, S3, Lambda, RDS, AppSync, Parameter Store, Secrets Manager**, and **CloudWatch**.
- Proficient in containerization and orchestration using **Docker** and **Kubernetes** for scalable deployment and microservices management.
- Strong knowledge of **CI/CD pipelines** using **Jenkins, GitHub Actions, Maven**, and **Git**, supporting automated builds, testing, and deployments.
- Adept in secure coding practices, following **OWASP guidelines**, and skilled in **defect resolution** using **Splunk** and **Sleuth**.
- Experience using IDEs such as **Eclipse** and **VS Code**, along with **GitHub Copilot** for AI-assisted development.
- Strong grasp of **design patterns** like **Singleton, MVC, DAO, Facade**, and **Factory** for creating modular and maintainable codebases.
- Hands-on experience with **application servers** such as **WebLogic, JBoss**, and **Apache Tomcat** for deployment and tuning.
- Skilled in **unit, integration, and functional testing** using **JUnit, Mockito, Selenium, Cucumber**, and **TestNG**.
- Excellent problem-solving and **analytical skills**, with the ability to troubleshoot and resolve complex technical issues efficiently.
- Strong **communication and collaboration skills**, with experience working in **Agile/Scrum** and **Waterfall** environments.
- Successfully delivered projects across domains including **Healthcare, Child and Family Services**, and **Project Portfolio Management**.
- Passionate about clean code, performance tuning, secure coding, and delivering business-driven, scalable solutions that enhance system performance and user experience.
- Designed and executed automated test cases using **Katalon Studio** for web and API testing, leveraging built-in keywords and custom scripts for end-to-end validation.
- Developed and maintained automated test scripts using **Selenium WebDriver** to validate UI functionality across multiple browsers and devices.

TECHNICAL SKILLS

- **Operating Systems:** Windows, Linux (Ubuntu, RHEL)
- **Cloud Concepts:** IaaS, PaaS, SaaS, Containerization (Docker, Kubernetes)
- **Programming Languages:** C, C++, Java 8/11/17, J2EE, Python, SQL, PL/SQL, Bash Scripting
- **Scripting Technologies:** HTML5, CSS3, JavaScript (ES6+), TypeScript, AJAX, JSON, XML
- **Frontend Frameworks:** Angular, React.js, ExtJs, Node.js
- **UI Libraries:** jQuery, Bootstrap, CSS
- **Java Technologies:** Core Java, JSP, Servlets, JDBC, JavaBeans, Spring Framework (MVC, Security, Data, AOP), Spring Boot, Microservices, RESTful APIs, GraphQL
- **ORM:** Hibernate, JPA
- **Enterprise Java:** EJB, JMS, JNDI, JTA
- **Security:** JWT, OAuth2, Spring Security
- **Testing:** JUnit, Mockito, TestNG
- **Build Tools:** Maven, Gradle, Ant
- **CI/CD:** Jenkins, GitHub Actions, GitLab CI/CD
- **Containerization:** Docker, Kubernetes, OpenShift
- **Cloud Platforms:** AWS, Azure
- **Databases:** Oracle, MySQL, PostgreSQL, MS SQL Server, MongoDB, Redis, Cassandra
- **Database Tools:** Oracle SQL Developer, DBeaver, pgAdmin
- **Application Servers:** Apache Tomcat, JBoss/WildFly, IBM WebSphere, WebLogic
- **Version Control:** Git (GitHub, GitLab, Bitbucket), SVN

- **Agile Tools:** JIRA, Confluence, Trello
- **IDEs & Development Tools:** IntelliJ IDEA, VS Code, Eclipse, NetBeans
- **Debugging & Profiling:** Visual, Profiler, Postman, Swagger
- **API Tools:** Postman, Swagger, SoapUI, REST Assured

EXPERIENCE

Sr. Java Consultant

10/2021 to Current

Department of Children & Families

Boston, Massachusetts

iFamilyNet is a comprehensive application that the Department of Children and Families (DCF) uses to provide vital services and support to children and families. It serves children from birth to 21 years of age who are at risk or have been victims of abuse or neglect. The application facilitates case management, tracking, and coordination of services to ensure child safety, permanency, and well-being. It also supports social workers and other professionals in managing assessments, service plans, and reporting to improve outcomes for vulnerable children and their families.

Key Responsibilities:

- Designed, developed, and deployed enterprise-grade web applications using **Java, JSF, PrimeFaces, JSP, HTML, CSS, JavaScript, jQuery**, and **RESTful Web Services** to ensure seamless user experiences and robust back-end functionality.
- Implemented **Microservices-based architecture** using **Spring Boot**, enabling modular, scalable, and high-performing services to support case tracking and service coordination across distributed systems.
- Built dynamic and responsive user interfaces using **PrimeFaces** components, enhancing UI/UX for JSF-based web applications.
- Developed and integrated business logic using **Java, iBatis**, and **MyBatis**, enabling efficient ORM-based interactions with **Oracle** and **MySQL** databases.
- Designed and implemented robust data persistence layers using **iBatis, MyBatis**, and **JDBC** to facilitate optimized and secure database operations.
- Implemented **JBPM (Java Business Process Management)** for automating complex workflows and business process orchestration across the application.
- Developed **Apache Kafka** Producers and Consumers for real-time data streaming and messaging between distributed microservices.
- Deployed and maintained applications on **Oracle WebLogic Server**, ensuring optimal configuration, performance tuning, and uptime.
- Leveraged **Eclipse** and **Visual Studio Code** IDEs for Java and full stack development, enabling efficient code management, debugging, and feature delivery.
- Implemented **AJAX, jQuery**, and **JavaScript** to develop dynamic, client-side interactions and asynchronous web requests, enhancing user responsiveness.
- Integrated applications with **Amazon Web Services (AWS)** for cloud deployment and management, including **EC2, S3**, and other cloud-native tools.
- Built and consumed **RESTful APIs** to enable seamless communication between frontend and backend systems as well as between microservices.
- Used **GitHub** for version control, source code management, and collaboration, leveraging **GitHub Copilot** for AI-assisted code completion and productivity enhancement.
- Followed **software design patterns** such as **MVC, Singleton**, and **Facade** to develop clean, maintainable, and scalable codebases.
- Wrote and maintained **unit tests** and **integration tests** using **JUnit** and **Mockito** to ensure application reliability and code quality.
- Automated build, test, and deployment processes using **Jenkins, Maven**, and **GitHub Actions**, enabling continuous integration and delivery (CI/CD).
- Participated in all phases of the **Agile software development lifecycle (SDLC)** including requirement analysis, sprint planning, daily stand-ups, code reviews, and end-of-sprint demos.

Environment: Java, JSF, Prime Faces, ibatis, mybatis, JBPM, Spring Boot, Microservices, Kafka, WebLogic, Eclipse, MS Visual Studio Code, JavaScript, jQuery, AWS, REST, HTML, GitHub, Copilot.

Sr. Java Consultant

12/2019 to 09/2021

Westlake Software, Inc.

Calabasas, CA

Westlake Software, Inc., is the creator of AIR mobility® (www.airmobility.net), a software-as-a-service (SaaS) vendor relationship management (VRM) platform that has evolved from traditional customer relationship management (CRM) platforms. Emphasis has shifted away from new sales and contact management to vendor and channel development, supporting highly mobile field labor teams.

Key Responsibilities:

- Designed and implemented scalable Microservices architecture using **Spring Boot, RESTful APIs**, and **Spring Cloud**, enabling modular development and seamless inter-service communication.
- Led end-to-end **Software Development Life Cycle (SDLC)** processes in Agile/Scrum environments, contributing to sprint planning, backlog grooming, daily stand-ups, sprint reviews, retrospectives, and demo presentations.
- Built robust server-side components using **Java, Spring Core, Spring MVC, AOP, Spring Security**, and **Apache Struts**, following the **MVC design pattern** to promote code reusability and maintainability.

- Integrated **Apache Kafka** for real-time, event-driven communication between services, developing reliable **Producers** and **Consumers** to improve system decoupling and scalability.
- Utilized **Hibernate (JPA)** and **iBatis/MyBatis** for efficient Object-Relational Mapping (ORM), managing complex **SQL/PLSQL queries**, CRUD operations, and transactional data across **MySQL**, **Oracle**, and **PostgreSQL** databases.
- Developed and deployed applications on **Apache Tomcat** and **WebLogic** servers, performing server configuration, performance tuning, and maintenance for high availability.
- Created and consumed **SOAP-based Web Services** using **JAX-WS** and **RESTful APIs**, defining **WSDL** contracts and handling **XML/JSON** data for cross-platform communication.
- Developed dynamic, responsive front-end interfaces using **HTML5**, **CSS3**, **JavaScript**, **jQuery**, **AJAX**, **Ext JS**, and integrated with **JSF** and **PrimeFaces** components.
- Utilized **JDeveloper**, **Eclipse**, and **Visual Studio Code** IDEs for development, debugging, refactoring, and optimization.
- Applied design patterns such as **Singleton**, **Factory**, **DAO**, and **Facade** to build scalable, loosely coupled, and maintainable applications.
- Implemented authentication and authorization mechanisms for secure data access, adhering to **OWASP** standards and secure coding practices.
- Wrote comprehensive unit and integration tests using **JUnit**, **Mockito**, **TestNG**, and participated in continuous testing to ensure code reliability and reduce defects.
- Automated build and deployment processes using **Jenkins**, **Maven**, and **GitHub Actions**, contributing to Continuous Integration and Continuous Delivery (**CI/CD**) pipelines.
- Managed source control using **Git**, **GitHub**, and **SVN**, handling versioning, branching, and collaborative development workflows.
- Integrated with cloud infrastructure including **AWS EC2**, **S3**, **RDS**, **Lambda**, and **CloudWatch** for scalable deployment and monitoring of applications.
- Participated in **performance tuning**, **troubleshooting**, and **bug fixing** using tools like **Splunk**, **Sleuth**, and **Logback** for enhanced system observability.
- Documented technical specifications, API contracts, architecture diagrams, and deployment procedures to support future maintenance and knowledge transfer.

Environment: Java, Spring, Apache Struts, Spring Boot, Microservices, Kafka, MongoDB, MySQL, Tomcat, JDeveloper, Eclipse, JavaScript, jQuery, Ext Js, REST, SOAP, HTML, SVN.

Sr. Java Consultant Net Direct Auto Sales

01/2017 to 12/2019
Texas

Net Direct project involved a large online inventory of lifted trucks, jeeps, and SUVs offered by an independently owned dealership specializing in lifted vehicles for customers to choose from. Our involvement was twofold: first, we worked on enhancing the online system by adding new features and optimizing the infrastructure to improve the overall online experience for their customers. Second, we focused on packaging the solution for resale and licensing to other independent dealerships, allowing them to leverage the system for their inventory management needs.

Key Responsibilities:

- Developed scalable **Microservices** using **Spring Boot**, **Spring REST Controllers**, and **RESTful APIs**, ensuring modularity, reusability, and seamless **JSON-based** data exchange in distributed enterprise systems.
- Participated in full **Software Development Life Cycle (SDLC)** phases including requirement gathering, design, coding, testing, deployment, and maintenance, while following **Agile/Scrum** methodology and contributing to daily stand-ups, sprint planning, reviews, retrospectives, and demos.
- Integrated **Apache Kafka** to enable asynchronous, real-time data processing and event-driven architecture; built robust **Kafka Producers and Consumers** to manage streaming data and ensure fault-tolerant communication.
- Developed dynamic and responsive **Single Page Applications (SPAs)** using **Angular** and **React JS**, leveraging Angular's **two-way data binding**, **dependency injection**, and React's **Hooks** and **Redux** for efficient component state management.
- Built reusable front-end components with **HTML5**, **CSS3**, **JavaScript**, **jQuery**, and **AJAX**, enhancing user experience with responsive UI and asynchronous content loading.
- Created and consumed **SOAP Web Services** using **JAX-WS**, generating **WSDL** files and ensuring interoperability with legacy systems and third-party platforms.
- Utilized **Orion Custom Framework** to streamline enterprise application development and ensure seamless integration with internal service layers.
- Implemented **Hibernate (JPA)** for Object-Relational Mapping (ORM) with **PostgreSQL**, performing advanced database operations such as CRUD, joins, stored procedures, and query optimizations.
- Employed **Eclipse IDE** for development, debugging, and performance profiling to deliver optimized, high-quality software.
- Used **Git** for source code management, handling branching, merging, pull requests, and conflict resolution in collaborative development environments.
- Applied well-known **design patterns** including **Singleton**, **Factory**, **DAO**, and **MVC** to design clean, modular, and scalable applications.
- Performed **unit testing** and **integration testing** using **JUnit** and **Mockito**, achieving high code coverage and ensuring application reliability through continuous test validation.
- Conducted **performance tuning**, **bug fixing**, and **root cause analysis** during all phases of the development and production cycle.

- Implemented **security best practices**, including **authentication**, **authorization**, and **encryption**, to safeguard application data and maintain compliance with enterprise security standards.
- Authored and maintained **technical documentation**, including API contracts, deployment guides, data flow diagrams, and user manuals for stakeholder reference and team onboarding.
- Participated in **code reviews**, **peer programming**, and **knowledge-sharing** sessions to enforce coding standards, promote reusable solutions, and elevate overall team productivity.

Environment: Java, Spring Boot, Microservices, Kafka, Angular, React JS, Custom framework (Orion), PostgreSQL, Cassandra, GIT, Eclipse, JavaScript, jQuery, REST, SOAP, HTML.

Sr. Java Consultant

06/2017 to 12/2017

Chinmaya Mission, Houston

Texas

Jivan Darshan is a web and mobile-based software designed to provide users with access to content related to Chinmayananda Swami. The mobile application allows users to view various media, including videos, images, and PDFs that are connected to the teachings and speeches of Chinmayananda Swami. Additionally, users receive daily push notifications informing them of new videos shared by the admin team, ensuring that they stay updated with the latest content.

Key Responsibilities:

- Designed and developed **scalable Microservices** using **Spring Boot**, adhering to SOLID principles and ensuring modularity, high availability, and clear separation of concerns across distributed enterprise systems.
- Developed and consumed **RESTful APIs** with **Spring REST Controllers**, enabling stateless communication and efficient **JSON-based** data exchange between front-end and back-end systems.
- Integrated **Hibernate (JPA)** with **PostgreSQL** for efficient persistence layer management, handling complex **CRUD operations**, stored procedures, pagination, batch updates, caching, and transactional integrity.
- Implemented **asynchronous messaging** and real-time processing using **Apache Kafka**, creating reliable **Kafka Producers and Consumers** to support event-driven architecture and decoupled microservices.
- Built dynamic and responsive **Single Page Applications (SPAs)** using **AngularJS**, **JavaScript**, **jQuery**, **HTML5**, and **CSS3**; applied two-way data binding, dependency injection, and routing for seamless UX.
- Engaged in all phases of the **Software Development Life Cycle (SDLC)**, including requirements gathering, analysis, architecture design, implementation, testing, deployment, and post-deployment support.
- Practiced **Agile/Scrum methodologies**, actively participating in sprint planning, backlog grooming, daily stand-ups, retrospectives, and sprint demos to ensure iterative development and timely delivery.
- Created and integrated **SOAP Web Services** using **JAX-WS**, defining **WSDL** files for service contracts and supporting cross-platform interoperability.
- Deployed applications to **Apache Tomcat Server**, managing configurations, optimizing performance, monitoring logs, and performing troubleshooting for production stability.
- Used **Postman** and **Swagger** for API testing, validation, and documentation to ensure quality and seamless third-party integration.
- Leveraged **Eclipse IDE** for development, code analysis, debugging, and refactoring, ensuring maintainability and adherence to coding standards.
- Employed **Git** for source control, handling versioning, branching, merging, pull requests, and resolving conflicts in a collaborative development environment.
- Applied well-established **design patterns** build maintainable, scalable, and loosely coupled systems.
- Conducted **unit testing** and **integration testing** using **JUnit** and **Mockito**, achieving high test coverage and reducing regression issues through automated pipelines.
- Performed **performance tuning**, memory profiling, and code optimization to enhance system responsiveness and reduce latency.
- Prepared and maintained **deployment scripts** and executed production deployments, including rollback plans to minimize downtime and ensure release reliability.
- Developed **reusable components**, utility classes, and shared modules to streamline development, reduce code duplication, and increase productivity.
- Participated in **code reviews**, architecture discussions, and **knowledge-sharing sessions** to drive continuous improvement, enforce best practices, and mentor junior developers.
- Created and maintained **comprehensive documentation**, including architecture diagrams, API specs, deployment instructions, and support manuals for team onboarding and maintenance.

Environment: Spring Boot, Hibernate, Microservices, Kafka, PostgreSQL, REST, Tomcat, Eclipse, JavaScript, jQuery, AngularJS, REST, SOAP, HTML, Git.

Sr. Java Consultant

02/2010 to 05/2017

PlanView

Austin, TX

The product, Innotas, offers an innovative, on-demand IT Governance solution. It is an easy-to-use, rapid-to-deploy, and cost-effective platform that allows IT departments to manage their entire portfolio. Innotas helps in overseeing resources, budgets,

and performance across an IT department's full inventory, including projects, portfolios, applications, assets, and service requests. By providing a comprehensive view of these elements, it ensures better decision-making, optimized resource allocation, and alignment with organizational goals.

Key Responsibilities:

- Designed and developed **secure SOAP Web Services** using **JAX-WS**, enabling seamless integration with third-party systems and external services while adhering to enterprise-grade **security best practices**.
- Built **responsive and dynamic web interfaces** using **JavaScript**, **jQuery**, **Ext JS**, **HTML5**, and **CSS3**, enhancing user experience through intuitive design and interactive UI components.
- Created **reusable Ext JS components**, controllers, and data stores, streamlining UI development and ensuring consistent look and feel across the application.
- Developed enterprise-level applications using **Java**, **J2EE**, and **Spring Boot**, applying **MVC architecture** to support modularity, scalability, and separation of concerns.
- Implemented both **RESTful** and **SOAP Web Services** using **Spring Boot**, **JAX-RS**, and **JAX-WS**, facilitating efficient communication between client and server systems across platforms.
- Integrated **Hibernate (JPA)** with **Oracle databases** for Object-Relational Mapping (ORM), managing **transactional integrity**, lazy loading, and efficient data access.
- Wrote optimized **SQL queries**, **PL/SQL stored procedures**, triggers, and packages to support high-performance data management and backend processing.
- Deployed applications on **Apache Tomcat Server**, configuring server parameters, monitoring logs, and ensuring application reliability and performance.
- Utilized **Eclipse IDE** for developing, debugging, testing, and refactoring code, improving productivity and code quality throughout the SDLC.
- Applied **version control** using **SVN** and **Git**, managing repositories, branches, merges, and release versions in a collaborative environment.
- Implemented **Spring Security** to manage authentication and authorization, securing REST endpoints and enforcing role-based access controls.
- Developed **unit tests** and **integration tests** using **JUnit** and **Mockito**, ensuring high test coverage, code quality, and early detection of issues.
- Conducted **code reviews** and collaborated with team members to maintain consistency, improve code quality, and ensure adherence to best practices.
- Participated in all phases of the **Software Development Life Cycle (SDLC)**, including requirement gathering, design, implementation, testing, deployment, and maintenance.
- Followed **Agile methodologies**, attending **daily stand-ups**, **sprint planning**, **backlog grooming**, and **retrospectives** to deliver incremental and iterative software solutions.
- Developed **utility classes** and shared modules to reduce redundancy, promote reuse, and accelerate development timelines.
- Collaborated with **cross-functional teams** including business analysts, QA engineers, and DevOps for end-to-end delivery of robust software solutions.
- Performed application **performance tuning**, troubleshooting, and optimization to improve system throughput and reduce response times.

Environment: Java, J2EE, Oracle, Spring Boot, Tomcat, Eclipse, JavaScript, jQuery, Ext JS, REST, SOAP, HTML, SVN, Git

Sr. Java Consultant

03/2008 to 01/2010

Zimbabwe Integrated Performance Management Solution

Government of Zimbabwe

The Zimbabwe Integrated Performance Management Solution (ZIPMaS) is a tailor-made application designed to provide RBM implementing agencies with an integrated, e-enabled solution. It supports the entire process of planning, programming, implementing, monitoring, measuring performance, reporting, and evaluating all programs carried out by public sector agencies across the government of Zimbabwe.

Key Responsibilities:

- Designed and developed **Java-based web applications** using **Spring Framework (Core, MVC, ORM, Security)**, **JSP**, **HTML**, **CSS**, **JavaScript**, **jQuery**, and **Bootstrap** for responsive and interactive user interfaces.
- Built scalable **RESTful Web Services** using **Spring Boot** and **Spring MVC**, enabling seamless communication between client and server components with efficient data exchange in JSON format.
- Developed and consumed **SOAP Web Services** using **JAX-WS**, generating and integrating **WSDL files** to define service contracts and ensure interoperability with external systems.
- Applied **MVC design pattern** to architect modular, maintainable applications with clear separation of concerns between business logic, UI, and data access layers.
- Integrated **Spring ORM**, **Spring JDBC**, and **Spring Data JPA** to perform **CRUD operations**, pagination, and complex queries with **PostgreSQL**, using **HQL/JPQL** for efficient data handling.
- Developed dynamic **client-side functionalities** using **JavaScript**, **jQuery**, and **AJAX**, improving application responsiveness and user engagement.
- Created **reusable Java components** and **utility classes** to promote code reuse, reduce redundancy, and enhance development efficiency.
- Utilized **Eclipse IDE** for Java application development, debugging, and code refactoring, supported by plugins for code analysis and performance monitoring.

- Managed source code using **SVN (Subversion)**, handling version control tasks including **branching, merging, and conflict resolution** to support collaborative development.
- Deployed applications on **Apache Tomcat**, preparing deployment scripts, managing server configurations, monitoring performance, and resolving runtime issues.
- Implemented **unit and integration testing** using **JUnit** and **Mockito**, validating application logic and ensuring reliability with automated test coverage.
- Integrated **SOAP and RESTful APIs** for external system communication, enabling data exchange and system interoperability.
- Participated in all phases of the **Software Development Life Cycle (SDLC)**, including requirement gathering, design, development, testing, deployment, and post-deployment support.
- Followed **Agile/Scrum methodologies**, actively contributing to **daily stand-ups, sprint planning, backlog grooming, retrospectives, and demo sessions** to deliver continuous value.
- Conducted **code reviews**, shared feedback, and enforced coding standards to maintain high code quality across the team.

Environment: Java, Spring, PostgreSQL, JSP, BPM, Tomcat, Eclipse, JavaScript, jQuery, REST, SOAP, HTML, SVN.

Java Consultant

07/2007 to 02/2008

Kerala Public Works Department

Government of Kerala

This project involves the design, development, and implementation of a web-based application that supports various activities within the Public Works Department (PWD), including E-Knowledge, File Tracking, E-Procurement, and Project Management. Key features of the application include digital signatures, data encryption and decryption, report generation, e-Procurement, Asset Management, and Project Management. Additionally, the project includes a tool for recording and tracking grievances received by the Public Information Cell within PWD.

Key Responsibilities:

- Developed robust **Java/J2EE applications** using **Core Java, JSP, Servlets, HTML, CSS, JavaScript, jQuery, and Bootstrap**, delivering dynamic, responsive, and high-performing user interfaces.
- Implemented the **MVC design pattern** to separate presentation, business logic, and data layers, enhancing application maintainability, scalability, and testability.
- Built and deployed web applications on **Apache Tomcat Server**, handling configuration, tuning, and performance monitoring for optimal runtime efficiency.
- Designed and developed **RESTful Web Services** using **JAX-RS (Jersey)** to expose APIs and support seamless communication between front-end and back-end components.
- Created and consumed **SOAP Web Services** using **JAX-WS**, generating **WSDL files** and managing XML data parsing and transformation for platform-independent service integration.
- Integrated **PostgreSQL** as the back-end database; implemented **CRUD operations**, complex queries, and stored procedures to manage data effectively and optimize performance.
- Developed **reusable utility classes** and **modular components** to reduce redundancy, improve code efficiency, and support future scalability.
- Implemented **security best practices** for web services, including **authentication and authorization mechanisms**, ensuring secure data communication and compliance.
- Conducted **unit testing** using **JUnit** to validate application logic and ensure code reliability; integrated testing within the CI pipeline for early defect detection.
- Utilized **Eclipse IDE** for developing, debugging, and refactoring code, with an emphasis on maintaining code quality and adhering to industry standards.
- Managed source code using **SVN (Subversion)**, performing version control operations such as **branching, merging, and maintaining code integrity** during collaborative development.
- Built responsive and interactive client-side functionalities using **JavaScript, jQuery, AJAX, and Bootstrap**, improving user engagement and asynchronous communication.
- Participated in all phases of the **Software Development Life Cycle (SDLC)** including requirements gathering, design, development, testing, deployment, and support.
- Created and maintained **technical documentation** for application modules, **APIs**, workflows, and deployment steps to support maintainability and cross-functional collaboration.

Environment: Java, J2EE, PostgreSQL, JSP, Tomcat, Eclipse, JavaScript, jQuery, REST, SOAP, HTML, SVN

EDUCATION AND TRAINING

B. Tech: Computer Science

Mahatma Gandhi University, Kottayam

2006

Kerala, India

CERTIFICATIONS

Sun Certified Java Programmer 1.6 (2009)
