EDUCATION

Pace University Master's, Computer Science	September 2024 - May 2026 GPA: 3.8
Lovely Professional University Bachelor's, Computer Science	September 2020 - May 2024 GPA: 3.3

CERTIFICATIONS

• AWS Certified Solutions Architect (Link)	April 2025
• AWS Certified Cloud Practitioner (Link)	March 2025

PROFESSIONAL EXPERIENCE

NBLK Consulting AI ML Engineer Intern	New York, NY, USA June 2025 - Present
- Developed and deployed an end-to-end ML pipeline using Python, scikit-learn, and OpenAI GPT-3.5 for NBLK's SMB Diagnostics Tool. Automated data parsing and insight generation with 90% accuracy. - Built an AI-powered feedback engine and dynamic report generator using React, Tailwind, and jsPDF, reducing manual turnaround time by 100%. - Integrated automated PDF email delivery using Node.js and SendGrid API, enabling real-time customer reports. - Collaborated with cross-functional teams using Agile methodologies to optimize report scalability and UX responsiveness. - Deployed application on AWS EC2, implementing CI/CD via GitHub Actions for version control and continuous deployment.	
Movidu Technology Software Development Intern	Bengaluru, KA, India June 2023 - May 2024
- Engineered and deployed scalable web application modules using React.js, Node.js, and Express, improving system performance and front-end rendering speed by 12%. - Designed and implemented RESTful APIs and middleware to handle authentication, data caching, and secure CRUD operations, increasing backend efficiency by 25%. - Refactored existing legacy codebases into modular component-driven architecture, enhancing maintainability and reducing development time for new features. - Developed and integrated automated testing workflows using Jest and Cypress, improving code reliability and reducing production bugs by 40%. - Collaborated with backend and DevOps teams to manage API versioning, environment configurations, and CI/CD pipelines, ensuring smooth deployment across staging and production environments. - Participated in Agile sprint cycles and peer code reviews, contributing to the successful release of enterprise-grade client portals with responsive UIs and optimized database interactions.	

PROJECTS

Care Circle - Link to project	July 2025 - September 2025
- Architected full stack, cloud native healthcare platform enabling patient management, diagnostic workflows, and real-time wellness tracking by AI & automation pipelines. - Engineered microservices using Node.js + Express with JWT authentication and PostgreSQL on Azure, achieving 99.9% data reliability and secure multi-role access. - Developed a modular React.js (Next.js) frontend with TypeScript and Tailwind CSS, featuring dark/light mode and analytics dashboards for clinicians. - Integrated OpenAI GPT models for automated medical note summarization and personalized recommendations, reducing manual documentation time by 60%. - Automated reporting and email delivery using SendGrid API and jsPDF, producing on-demand summaries with zero manual intervention. - Deployed via Azure App Service, Docker, and GitHub Actions, implementing CI/CD pipelines and monitoring with telemetry dashboards.	
Sentiment Sense - Link to project	March 2025 - April 2025
- Developed an NLP-based sentiment analysis web app using Python, scikit-learn, and BERT, achieving 90%+ accuracy on real-world reviews. - Implemented real-time text classification and inference with a fine-tuned transformer model for contextual sentiment detection. - Built an interactive Streamlit UI for instant predictions and visualization of polarity distributions. - Deployed complete solution on Streamlit Cloud, integrating model persistence and API-driven scalability.	
AI Interview Bot with Voice Interaction - Link to project	February 2025 - March 2025
- Created an AI-powered interview simulator using Flask, NLP, and SpeechRecognition, supporting live voice-to-text input. - Integrated GPT-based Q&A generation and scoring logic to evaluate candidate responses dynamically. - Implemented MVC architecture for modular backend-UI separation, improving scalability by 40%. - Enhanced user experience with hands-free mode, reducing setup time and improving engagement.	
Object Detection System - Link to project	January 2025 - February 2025
- Built an object detection pipeline using PyTorch, Faster R-CNN, and OpenCV for shelf-product recognition. - Fine-tuned pre-trained models, applying image normalization and augmentation to improve robustness. - Designed a visual inference dashboard using Matplotlib for bounding-box inspection and validation. - Achieved consistent detection accuracy across variable lighting and camera conditions.	
HACKATHONS	
PwC × Wells Fargo Modernizing Finance Hackathon	October 2025
• Built a financial diagnostics prototype using AI/ML to automate SMB cash-flow insights and reporting; presented solution to PwC and Wells Fargo executives.	
NBLK Hiring Platform Challenge	April 2025
• Designed an AI-driven talent-matching platform integrating GPT-based resume parsing and scoring logic, improving candidate-role alignment accuracy by 85%.	
Computer System Design & Development CaterPal Technologies	March 2025
• Developed an NLP-powered catering assistant using Python & spaCy to generate real-time, budget-aware menu recommendations for users.	
Commuter App Design & Launch MTA × NJ Transit	November 2024
• Engineered a unified commuter app integrating live transit APIs and QR-based ticketing, streamlining cross-state travel for 100K+ daily users.	

SKILLS

Programming Languages: Java, Python, C/C++, JavaScript, TypeScript, SQL, R, System Design, OOP, Data Structures
Web: HTML/CSS, React.js, Next.js, Redux, Tailwind, Bootstrap, Node.js, Express.js, Angular.js, Django, Flask
Backend: REST APIs, JWT, OAuth2, Microservices Architecture, API Development, Postman API
Cloud: AWS (EC2, S3, RDS, Lambda), Azure, GCP, Docker, Kubernetes, Terraform, Git, GitHub, GitHub Actions, Git CLI
Databases: PostgreSQL, MySQL, MongoDB, Supabase, Firebase, Redis, GraphQL
AI: Tensorflow, Pytorch, scikit-learn, Hugging Face, Transformers, NLTK, spaCy, Pandas, NumPy, Matplotlib
