PH: +1 (971)-217-6368

Sr. Data Engineer

PROFESSIONAL SUMMARY

- Around 7 years of IT experience in a variety of industries and hands-on experience in Big Data Analytics design and development.
- Hands on experience working with Databricks environment and worked with Lake House Architecture.
- Hands-on experience working with Snowflake Database.
- Hands-on experience with Amazon EC2, Amazon S3, Amazon RDS, VPC, IAM, Auto Scaling, CloudWatch, SNS, SES, SQS and other services of the AWS family.
- Experience in working in Hadoop eco-system integrated to the Cloud platform provided by AWS with several services like Amazon EC2 instances, S3 bucket and RedShift.
- Good experience working with Azure Cloud Platform services like Azure Data Factory (ADF), Azure Data Lake, Azure Blob Storage, Azure SQL Analytics, HDInsight/Databricks.
- Extensive experience working with spark distributed Framework involving Resilient Distributed Datasets (RDD) and Data Frames using Python and Java.
- Good work experience with cutting-edge technologies like Kafka, Spark, Spark streaming.
- Experience in collecting, processing, and aggregating large amounts of streaming data using Kafka, Spark Streaming.
- Experience in designing Data Marts by following Star Schema and Snowflake Schema Methodology.
- Experience in managing and analyzing massive datasets on multiple on-prem Hadoop frameworks such as Cloudera and Hortonworks distribution of Hadoop.
- Worked with terraform for managing the infrastructure.
- Experience in Spark-Scala programming with good knowledge on Spark Architecture and its Inmemory Processing
- Experience in designing and developing applications in Spark using Python to compare the performance of Spark with Hive.
- Hands-on experience in building data models (star, snowflake schema and data vault) for the ETL pipelines.
- Hands on experience on Data Analytics Services such as Athena and Glue Data Catalog.
- Excellent understanding and knowledge of NOSQL databases like HBase, DynamoDB and Cassandra.
- Experienced in converting Hive/SQL queries into Spark transformations using Spark Data Frames and Python.
- Worked with various software development methodologies like Agile and Waterfall.

SKILLS

◆ Hadoop Ecosystem	Kafka, Spark, Sqoop, Map Reduce, HDFS, Zookeeper, Hive, Impala.
◆ Schedulers	Airflow, Autosys, Oozie Control-m, Crontab.
◆ Database	Oracle, MySQL, Teradata, Snowflake.
◆ Languages	Scala, Python, Java, SQL
◆ AWS	RDS, Kinesis, Lambda, DynamoDB, SNS, CloudWatch, EMR, EC2.
◆ NoSQL	HBase, MongoDB
◆ Methodologies	Agile, Scrum
◆ Others	Jupyter Notebook, Terraform, Docker, Kubernetes, Jenkins, Jira.

PROFESSIONAL EXPERIENCE

**Senior Data Engineer,
Nike, Portland, OR**

05/2023 - Current

- Worked on a tech modernization initiative to replace Perspectium (3rd party tool that provides service now data) with ServiceNow APIs to consume the data via python & Restful API that was run on Databricks compute and loaded the final data into snowflake database for reporting and analytical use cases.
- Implemented multiple pipelines that ingests data (~100 tables) from ServiceNow APIs.
- Worked with Kafka and spark structured streaming to process the data near real-time.
- Consumed Json events from kafka topic and have written the data to Delta tables also worked extensively in optimizing the pipelines to reduce the cost and SLA.
- Used Terraform to manage the infrastructure., Worked on setting up IAM roles, polices and aws resources such as RDS, EMR and DynamoDB.
- Implemented Lake House architecture from Databricks and worked extensively with features such as Unity Catalog, DB-SQL, DBR-Workflows, DLT and Delta tables.
- Worked on building logical and physical data models. Extensively worked with snowflake and star schema data models.
- Implemented data quality and governance processes, leading to a 25% decrease in data errors and ensuring compliance.
- Automated addition of Data Quality checks within each pipeline for proactive monitoring.
- Modularized and parameterized the code for reusability.
- Integrated databricks notebooks with GitHub and scheduled them from DBR-Workflows.
- Achieved performance optimization by reducing 50% in data processing time and enhanced the data accuracy.
- Conducted ETL operations within a Databricks Lakehouse environment for efficient data transformation.
- Effectively managed and scheduled jobs through data bricks workflows, ensuring streamlined and automated data processing for optimized efficiency.
- Worked with Unity Catalog to manage the permissions and used DB-SQL for querying the datasets.
- Worked on performance tuning of the spark jobs and snowflake tables for improving read/write efficiency with respect to cloud cost spend and to meet SLA timelines.
- Worked with snowflake managed, external tables, materialized views and time travel.
- Involved in end-to-end implementation of the project right from requirements gathering till successful deployment and hand off the code for support.

Environment: AWS, Spark (PySpark, SparkSQL), Python 3.x, Snowflake, Databricks (Unity Catalog, DB-SQL, DBRWorkflows), GitHub, Airflow, ETL, DWH.

**Data Integration Engineer
Amerisure, Farmington Hills, MI**

10/2020 - 05/2023

- Used SnapLogic (ETL tool) for extraction, transformation and loading data from Guidewire datahub into target warehouses.
- Worked on migrating ETL pipelines that are run on SnapLogic to run on AWS data lake.
- Transformed batch data from several tables containing tens of thousands of records from SQL Server, MySQL, PostgreSQL, and CSV file datasets into data frames using PySpark

- Developed a PySpark program that writes data frames to HDFS as Avro files.
- Migrated pipelines to run on AWS EMR clusters and store the data on S3.
- Utilized Spark's parallel processing capabilities to ingest data.
- Created and executed HQL scripts that create external tables in a raw layer database in Hive.
- Developed a Script that copies Avro formatted data from HDFS to External tables in raw layer.
- Created PySpark code that uses Spark SQL to generate data frames from Avro formatted raw layer and writes them to data service layer internal tables as parquet file format.
- Worked on creating source to target mapping documents and data dictionaries.
- Parsed high-level design specification to simple ETL coding and mapping standards.
- Designed and customized data models for Data Warehouse supporting data from multiple sources in real time.
- Worked with airflow for scheduling and orchestrating the pipelines and execute data ingestion pipeline based on events, schedule and also configured cross dependencies on airflow dag's.

Environment: AWS Services, Hadoop, Redshift, RDS, Hive, Sqoop, Spark, Teradata, Parquet, Oracle 12c, PL/SQL, SnapLogic, Kafka, GitHub, Shell Scripts.

Data Engineer

Encova Insurance, Cleveland, OH

01/2019 – 09/2020

- Extract, Transform and Load data from source systems to Azure Data Storage services using a combination of Azure Data Factory, Azure Databricks, Blob Storage, Azure Synapse, T-SQL, Spark SQL, and Azure Analytics
- Extensively worked on Spark Streaming and Apache Kafka to fetch live streaming data.
- Constructed product-usage SDK data and data aggregations by using PySpark, Scala.
- Worked with Azure HDInsight clusters and migrated Hive scripts to Spark.
- Experience in creating configuration files to deploy the SSIS packages across all environments.
- Implemented CI/CD pipelines using Jenkins and built and deployed the applications.
- Documenting the best practices and target approach for CI/CD pipeline
- Worked on developing Restful endpoints to cache application specific data in in-memory data clusters like Redis and exposed them with Restful endpoints.
- Creating Databricks notebooks using SQL, Python and automated notebooks using jobs Responsible for performing Machine-learning techniques regression/classification to predict the outcomes.
- Familiar with data architecture including data ingestion pipeline design, Hadoop information architecture, data modelling and data mining, machine learning and advanced data processing.

Environment: Hadoop, ETL operations, Data Warehousing, Data Modelling, Azure Data Factory, ADLS, Azure Databricks, Advanced SQL methods, Python, Linux, Apache Spark, Scala, Spark-SQL.

Data Engineer

Careator Technologies Pvt Ltd, India.

06/2017 – 05/2018

- Designed Distributed algorithms for identifying trends in data and processing them effectively.
- Perform T-SQL tuning and optimizing queries for and SSIS packages.
- Creating an SSIS package to import data from SQL tables to different sheets in Excel.
- Used Spark SQL for data pre-processing, cleaning, and joining very large data sets.

- Co-developed the SQL server database system to maximize performance benefits for clients. Assisted in the design of ETL processes, including SSIS packages.
- Worked on Informatica for building ETL pipelines and load the data into SQL server.
- Database migrations from traditional data warehouses to spark clusters.
- Worked on migrating data to CDH Hadoop and did POC on Spark-SQL and Hive performance.
- Ensure the data warehouse was populated only with quality entries by performing regular cleaning and integrity checks.
- Developed SQL queries to perform data extraction from existing sources to check format accuracy.
- Developed automated tools and dashboards to capture and display dynamic data.

Environment: SSIS, T-SQL, Hadoop, Spark SQL, SQL Server, Informatica, SQL/PL-SQL, Linux, Erwin, Cloudera, MS Excel.

Education:

**Master of Science (Computer Science)
Southern Illinois University Edwardsville.**

2018 - 2020.
