

SUMMARY

- 4+ years of experience as a **Mainframe / Software Engineer** in development, testing, maintenance, and 24x7 production support across **Health Care, Banking, Retail, and E-commerce domains**, resolving job failures, abends, and **NDM/FTP** data transfer issues within SLA to ensure uninterrupted eligibility and claims processing.
- Proficient in core mainframe technologies such as **COBOL, JCL, DB2, VSAM, MQ, IMS, Control-M** and **Oracle**, with expertise in modernizing legacy systems through **RESTful API integration** using **z/OS Connect EE** and **Java** middleware.
- Skilled in developing **batch processing solutions** for **payments, authorizations, ATM transactions, and rewards processing**, utilizing **stored procedures, SQL tuning, and database optimization** to ensure **high performance and data accuracy**.
- Experienced in automating testing processes using **REXX** and supporting various testing phases including **functional, regression, and UAT**.
- Strong command of **SDLC and Agile Scrum methodologies**, Vantage-One (wmA) and Life Insurance policy administration systems, collaborating with **cross-functional teams and stakeholders** to deliver **scalable, high-quality solutions on schedule**.
- Proficient in **DevOps practices** for mainframe environments, including automation with **Jenkins, Git, and Control-M scheduler** for efficient batch job management.
- Adept at **troubleshooting production issues**, ensuring system **stability** and compliance with **service-level agreements**.
- Committed to **continuous improvement and innovation** within fast-paced banking domains.
- Hands-on experience in **batch, online, and ETL processes**, ensuring accurate and timely data processing and reporting.
- Skilled in **Mainframe tools and utilities** including **XPEDITER, SMARTTEST, FILE-AID, INTERTEST, ENDEAVOR, CHANGEMAN, ABEND-AID, OMEGAMON, and R2DS Test Harness**.
- Adept at **end-to-end SDLC**, from requirements gathering, functional & technical design, coding, testing, deployment, to post-production support.
- Proficient in **troubleshooting ABENDs, monitoring batch/online jobs, root cause analysis (RCA), and incident management** to maintain high system availability.
- Experienced in **collaborating with business users, cross-functional teams, and offshore teams**, delivering timely solutions and enhancements.
- Trained and mentored new team members, sharing **application knowledge, tools expertise, and Mainframe best practices**.
- Recognized for **delivering client-requested reports, system enhancements, and process improvements** with accuracy and efficiency.
- Focused on **adapting to new technologies, optimizing system performance, and reducing production incidents** while contributing to organizational growth.

TECHNICAL SKILLS

- **Languages & Mainframe Programming:** COBOL, COBOL-II, MFCOBOL, COBOL POINTERS, JCL, REXX, PL/I, C, Easytrieve, UNIX, NDM/FTP protocol, C, C++, java, Ruby, python and ASM Languages, REXX, SAS, EST, ICETOOL, SORT, TSO/ISPF, HTML, XML, AWS, Microfocus, Shell Scripting
- **Mainframe Technologies & Integration:** DB2, VSAM, IMS, MQ Series, CICS, TSO/ISPF, RACF, COBOL Stored Procedures, Native Stored Procedures, XML Parsing, Batch MQ Processing, z/OS Connect EE (RESTful API development), VSAM JCL Endeavor Claims processing knowledge/Apps/POS.
- **Databases:** DB2, Oracle, SQL Server, MQ, IMS, VSAM, DFSORT (via SYNC SORT), IBM Utilities, Postgres DB.
- **Mainframe Tools & Utilities:** XPEDITER, SMARTTEST, FILE-AID, INTERTEST, ENDEAVOR, CHANGEMAN, ABEND-AID, OMEGAMON, QMF, CA7, SYNC SORT, R2DS Test Harness, Assembler, RACF (Security Administration), IBM Utilities, IDCAMS, IEBGENER, ICETOOL, SORT
- **Applications / OLTP:** CICS, BMS Screens, XML, HTML, MQ Series, Batch & Online Processing, IBM z/OS, CICS (Command-Level), TSO/ISPF, Batch & Online Processing.

- **Development & Operations:** TSO/ISPF, SDSF, SPUFI, Production Support, Incident Management, Abend Debugging, IBM Developer for z/Systems (IDz), Endeavor, Changeman, Xpeditor, FILEAID, TSO/ISPF, Kofax.
- **DevOps, CI/CD & Version Control Tools:** Zowe CLI/Explorer (mainframe DevOps and Git integration), Git, UrbanCode Deploy, SonarQube, ServiceNow, CI/CD, AWS (EC2, ECS, S3), Docker, Kubernetes (familiarity), Zowe CLI
- **Messaging & Streaming:** Apache Kafka (exposure), MQ Series
- **Job Scheduling & Monitoring:** CA7, OMEGAMON, Control-M (job scheduling and migration), Jenkins (batch job automation and DevOps), XCOM, NDM, BMC Utilities
- **Source Code & Version Control:** Endeavor, Changeman, XPEDITER, FILE-AID, ABEND-AID, CA7, Control-M, JIRA, ServiceNow.
- **Testing, Debugging & Code Management:** Unit Testing, Regression Testing, UAT, DB2 SQL Performance Tuning, File-AID, Xpeditor, Changeman, Peer Reviews, Root Cause Analysis, Abend-Aid, SMARTTEST, TDD, OpenText Exstream
- **Project & Test Management Tools:** JIRA, Rally, Q-Tracker, Microsoft Office Suite, Quality Center, GOPDA
- **Development Methodologies:** Agile (Scrum), SDLC, Backlog Grooming, Sprint Planning, Cross-functional Collaboration, High-Level and Low-Level Design (HLD/LLD), Impact Analysis, Re-engineering Initiatives, Root Cause Analysis, Code Review & Peer Mentoring.
- **Domain Expertise:** Banking & Financial Services — Payments Processing, Duplicate Detection, Batch Optimization, Mainframe-to-API Integration, Healthcare — Claims Adjudication, MMIS (Medicaid Management Information System), Eligibility Processing, HIPAA Compliance, Life Insurance Policy Systems (Vantage-One / wMA familiarity), Healthcare Claims Processing, Financial Data Integration
- **Issue Tracking & Collaboration:** JIRA, Confluence, ServiceNow, SharePoint, Agile/Scrum, Client Communication, RCA (Root Cause Analysis), Cross-Team Coordination
- **Environment:** z/OS, OS/390, MVS/ESA, AIX, UNIX, Windows

PROFESSIONAL EXPERIENCE

Client: AMEX, USA | **Mar 2024 – Present**

Domain: Banking, Financial Services

Role: Mainframe Developer

Responsibilities:

- Developed and maintained **COBOL and DB2** programs for banking transactions, ensuring accurate processing of high-volume data daily and Design, Develop, and Test Legacy POS system.
- Enhanced Legacy Members and Eligibility subsystems within the enterprise Claim Processing System (CPS), improving accuracy of Medicaid and Medicare claim adjudication and optimizing data transmission to downstream systems via FTP protocols.
- **Implemented RESTful APIs on z/OS systems using z/OS Connect EE**, enabling digital integration of core banking systems with frontend and middleware layers.
- **Used Zowe CLI and Git** to modernize source control and facilitate better collaboration between mainframe and distributed application teams.
- Developed logic for **payment file generation**, integrating both **real-time and batch data sources**, and built validations to prevent **duplicate payments** across channels.
- Automated batch **job monitoring and reporting** using **Control-M and Jenkins**, improving operational efficiency and reducing manual errors across job execution workflows.
- Proposed and delivered **re-engineering solutions** that optimized CPU utilization and reduced batch job execution time, resulting in annual cost savings for the client.
- Provided production support for critical batch runs, analyzing abends and resolving incidents to maintain **99.9% uptime** SLA compliance.
- Led end-to-end development and enhancement of payment processing modules, adhering to SDLC and **Agile methodologies** for on-time delivery of business-critical applications.
- Collaborated with **Product Owners** to manage the sprint backlog, refine user stories, and ensure clarity of scope across cross-functional teams.

- Designed and executed unit, integration, and regression test plans for **COBOL, CICS, and DB2** modules; documented test results, design specs, and deployment notes to support continuous improvement in mainframe healthcare applications.
- Implemented batch and online programs using **CICS, VSAM, and MQ Series** to support various banking operations.

Client: UnitedHealth Group | Hyderabad, India | Aug 2022 – July 2023

Domain: Health Care / Health Insurance (Claims Processing System)

Role: Software Engineer

Responsibilities:

- Supported and enhanced the enterprise-level **Claim Processing System (CPS)** ensuring accurate and timely medical claim processing and downstream data transmission.
- Developed and maintained mainframe COBOL, CICS, DB2, and VSAM applications across banking and healthcare domains, implementing IBM Utilities, Control-M job scheduling, and FTP-based data exchange to improve batch processing efficiency.
- Provided **24x7 production support**, resolving job failures, abends, and system alerts within defined SLAs.
- Created and optimized **SQL queries and ad-hoc reports** to meet client-specific business needs.
- Collaborated with business and cross-functional teams to gather requirements and coordinate production issue resolutions.
- Conducted **unit, system, and integration testing** for batch and online applications to ensure defect-free releases.
- Implemented system enhancements and bug fixes, improving performance, compliance, and operational efficiency.
- Trained and mentored new team members on tools, workflows, and healthcare claim processing best practices.

Client: Elevance Health | Hyderabad, India | Jun 2021 – Aug 2022

Domain: Health Care – Dental Claims Processing / Health Insurance

Role: Associate Software Engineer

Responsibilities:

- Supported the **Wellpoint Dental System (WDS)**, a legacy application for daily dental claim processing and downstream data transmission.
- Operated in a high-pressure **production support environment**, managing client expectations and delivering critical solutions efficiently.
- Conducted **root cause analysis** with application SMEs to resolve production issues and maintain service stability.
- Performed **abend fixes and incident resolutions**, improving application stability by ~20%.
- Delivered **client-requested reports** accurately and promptly, earning recognition for turnaround and quality.

PROJECTS

Banking & Financial Services – AMEX, USA | Mar 2024 – Present

Developed and maintained COBOL, DB2, CICS, VSAM, MQ Series, and JCL programs for high-volume banking transactions, batch and online processing. Provided 24x7 production support, resolved ABENDs, implemented restart logic, coordinated with offshore teams, and delivered unit, system, regression testing, and UAT support.

Health Care – UnitedHealth Group, Hyderabad, India | Aug 2022 – Jul 2023

Supported and enhanced the Claim Processing System (CPS) using COBOL, JCL, DB2, VSAM, CICS, and Easytrieve. Delivered production support, ad-hoc reports, system enhancements, and conducted unit, system, and integration testing while mentoring team members.

Health Care – Elevance Health, Hyderabad, India | Jun 2021 – Aug 2022

Maintained the Wellpoint Dental System (WDS) for dental claim processing using COBOL, JCL, DB2, VSAM, CICS, and Easytrieve. Managed production support, performed ABEND fixes, root cause analysis, delivered client reports, and ensured service stability.
