

# Vamshi Krishna Batthula

CLOUD DATABASE ADMINISTRATOR

**Microsoft**  
**CERTIFIED**  
Technology  
Specialist

✉ bvamshi.consultant@gmail.com ☎ (281)966-5688

SQL Server DBA & Azure Expert || 16+ Years in Database Architecture & Cloud Solutions || Open to Relocation

## Executive Profile

- **Results-driven Senior DBA with 16+ years of experience** in 24/7 administration of **MS SQL Server across on premises and cloud environments Azure/AWS**.
- Installation, configuration, and upgrade of **SQL Server 2019/2016/2014/2012/2008 R2/2005/2000** on stand-alone and fail-over Cluster and applying the latest service packs/hot fixes.
- **Experience in Query optimization & Performance Tuning**. Used Performance tools like SQL Profiler, Index Tuning Wizard and Database Engine Tuning Advisor.
- High availability through **Clustering, Always-On, Log-shipping, Replication, Mirroring and disaster recovery strategies**.
- Rich technical background in design, architecture, implementation, optimizing, fine tuning, troubleshooting & fixing of Database Systems (**including Production, QA, Dev, INT, TRN and UAT**)
- **Creating Automation Solutions using PowerShell** for Blocking, SQL Server Restores, monitoring disk space utilization, CPU performance, I/O activities and other database related performance issues.
- Fully understand the SLA commitment and meet the **ITIL standards**.
- **AWS Cloud & SQL Server on AWS** – Deploy, configure, and manage SQL Server Always On in AWS (EC2/RDS).

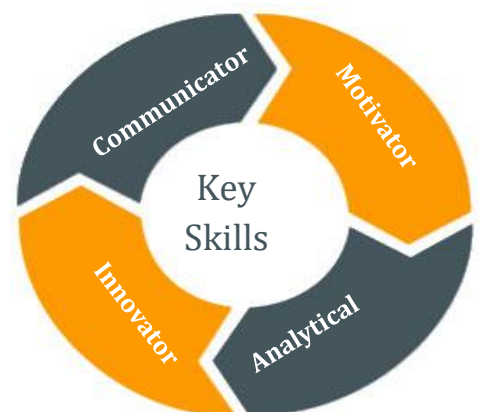

## Core Competencies

|                                      |                                                      |
|--------------------------------------|------------------------------------------------------|
| Cloud & On-Prem Administration (DBA) | SQL Server Production Support                        |
| Database Backups, RPO, RTO           | Performance Tuning & Optimization                    |
| DB Restore & Disaster Recovery (DR)  | Import, Export, Migration & Upgrades                 |
| Database Automation, PowerShell      | Failover Clustering, AlwaysOn, Mirroring Replication |
| Incident & Problem Management        | ITIL Framework, Best Practices                       |

## Education & Certification

- ✉ B.Tech. (E.C.E) from JNTU, Hyderabad, India
- ✉ Microsoft Certified Technology Specialist (MCTS)
- ✉ Certified in ITILV3Foundation - December 2011
- ✉ Azure Fundamentals AZ-900

## Soft Skills

## Notable Accomplishments Across Career

- Employee of the Quarter – The Gladiator in 2021
- Appreciation for creating the Pragati Articles and KB Articles in 2020.
- Certificate in All Hands Meeting- March 2016 for magnificent trouble shooting the issues in migrations
- Best DBA Team Award of the Quarter - July 2014
- Received Star of the Month Award for Maintaining Good Quality- September 2010
- Received Performance Award as a First Platinum Club Member for consistently maintaining 100% quality for 6 Months - August 2009

## Technical Skills

- RDBMS: **Microsoft SQL Server, Oracle, AWS and AZURE.**
- **SQL Server Versions 2019/2016/2014/2012/2008/2005/2000**
- Third Party Tools: Cohesity, TSM, TDPSQL, Avamar
- Monitoring Tools: **Portal Azure, Microsoft Operations Management (MOM), Spotlight, V-Foglight, SCOM, TEC, NetIQ, HP Tools.**
- Ticketing Tools: **JIRA, Service Now, BMC Remedy 7, ROD, Magic and MKS Integrity**
- Operating System: Windows 2000/2003/2008/2008 R2/2012/2016 Servers
- Other Tools: **T-SQL, PowerShell, BMC Control-M, VM Ware, MS OFFICE**

## Professional Experience

|              |                                                       |
|--------------|-------------------------------------------------------|
| Client:      | Wells Fargo                                           |
| Role:        | Senior Cloud Database Administrator                   |
| Duration:    | October-2021 to Present                               |
| Database:    | AZURE, AWS, Oracle and SQL Server 2012/2014/2016/2019 |
| Description: | Enterprise Database Management (EDM)                  |

### Key Result Areas:

- Developed and maintain **PowerShell scripts** to automate routine database administration tasks, including **backups, restores, failovers, and monitoring.**
- **Migrated SQL Server from lower environments to Azure, ensuring seamless transitions and compliance, resulting reduction in downtime.**
- Troubleshoot and resolve **failovers, replica synchronization issues, and performance bottlenecks** in **Always On environments.**
- Working on **Application Management Automation (AMA)** tool for **automating the BCP Failover activities.**
- Working on Database Improvements and Performance Tuning and providing Training to the Team.
- Designed and implemented **SQL Server Always On Availability Groups on AWS EC2 instances** for a highly available and disaster-resistant database environment.
- Participating in DR Activities and Planning and Execution of the Run book for the smooth failover of the DR
- Worked on:
  - Migrating the SQL Server from lower environment to higher environments
  - Remediating the Compliance issues
  - Preparing the Security Base Line scripts and Deploying across all the servers
- Conducting the Daily Team meeting and providing the management information daily by pulling the CCR and Incident Reports.
- Participated in CCB and provided suggestions for effectively closing the CCRs and following the Good Documentation Process.
- Created **PowerShell scripts** to automate **full, differential, and transaction log backups** from AWS RDS SQL Server instances to **Amazon S3.**

|           |                                              |
|-----------|----------------------------------------------|
| Client:   | Northern Trust                               |
| Role:     | Senior Consultant/ Lead Administrator        |
| Duration  | June-2020 to Sep 2021                        |
| Database: | SQL Server 2019/2016/2014/2012/2008/ 2008 R2 |

#### Key Result Areas:

- Developing the **Automation Solutions using PowerShell** for Blocking, SQL Server Restores, monitoring disk space utilization, CPU performance, I/O activities and other database related performance issues.
- Designing backup strategies as per the need of database environment considering RPO and RTO requirements; Performing regular / periodic backups including full, differential and T-log backups; restore drills, transaction log and data file maintenance; index maintenance; security considerations, database partitioning and data compression.
- Recovery of mission-critical data following established procedures; monitoring all aspects of utilization & performance of Database infrastructure and developing action plans to address issues; designing & implementing.
- policies and procedures for disaster recovery and data archiving to ensure effective protection & integrity of data assets.
- Planning, designing and executing high availability solutions; providing comprehensive documentation for management decisions. Managing and maintaining existing high availability features including failover clusters, database mirroring, log shipping, replications and availability groups ensuring service level agreements
- Developed **PowerShell-based automation** to apply **SQL Server cumulative updates and service packs**.
- Designing, developing & managing high quality, efficient and effective solutions in Microsoft SQL Server T-SQL, Store Procedure, View, Trigger, SSIS and related tools to support several large-scale projects.
- System Administration including users, distribution list, access and permissions, terminal servers, remote desk top access, backup tape management, server building and overall IT infrastructure management, Citrix, VMware, Cloud Computing, SCOM, Network Administration, Source Control Management
- **Managing the 1200+ Server and Databases** and helping in tune to the Queries and Jobs
- **Optimized SSIS Packages** by implementing parallel processing, partitioning and incremental data loads.
- Optimized the performance of the **SSRS reports** by tuning queries and using report catching.
- Working on:
  - **High Availability such as Always-On, Replication**
  - **Automation Solutions with Orchestrator and Developing the Automation Solutions for the SQL Server Tower**
  - Vulnerabilities and upgrading of the latest service patch and hot fixes.
  - Quarterly Audit for the Elevated Privileges and SQL Server Backup Files Verification
  - DR Activities and Planning and Execution of the Run book for the smooth failover of the DR
- Maintaining product service level agreements and standards of one or more sets of SQL databases through proactive and reactive means; implementing operational initiatives and projects of low complexity intended either to increase the efficiency and scalability of a rapidly growing infrastructure or that provide significant business value
- Joining in SWAT Calls and troubleshooting the High Priority INC for the Fixes and Closures.
- Maintaining the Run Book, Creating the KB articles and all the related SOP's Documents

|           |                       |
|-----------|-----------------------|
| Client    | T-Mobile USA          |
| Role      | Lead Administrator    |
| Duration  | Nov-2017 to May-2020  |
| Database: | SQL Server Azure 2016 |

#### Key Result Areas:

- Prepared WI, SOPs
- Worked on High Availability such as Always-On Replication, Mirroring, Log shipping.
- Upgraded latest service patch and hotfixes.
- Developed PowerShell scripts and templates to automate the provisioning and installation.
- Designed, developed & maintained appropriately scaled, effective solutions to support source extract, data cleansing, transformation, target upload and reconciliation activity in Microsoft SQL Server T-SQL, SSIS
- Provided technical support to users and recommended and implemented technical improvements as per ITIL standards, monitoring the support desk system and responding promptly to incidents & escalations.
- Participated in internal and customer meetings assisting with the ongoing evolution of technology offerings.
- Migrated the Databases from lower versions of SQL Server to Azure.
- Managed the server & databases and helped tune in with the queries & jobs.

|              |                                             |
|--------------|---------------------------------------------|
| Client:      | Corning Incorporated                        |
| Role:        | Lead Administrator                          |
| Duration:    | Aug-2015 to Nov-2017                        |
| Database:    | SQL Server 2000/2005/2008/2008 R2/2012/2014 |
| Description: | Application Image Migration                 |

#### Key Result Areas:

- Worked on **Datacenter Database Migration** Approaches High Level Design and Low-Level Designs for Business
- Participated in L1, L2 & L3 chatters and Preparing the Project chatters for the Migration Approaches
- Performed installation, configuration SQLserver2014/2012/2008 R2/2005 and upgrading latest service patch and hot fixes Production support of multiple clients in leverage model.
- **Migrated the SQL Server Databases from one datacenter to another.**
- **Worked on Upgrading the SQL Server Versions to N or N-1 Versions**
- Building New SQL Server in **Datacenters and setting up HA for smooth cutover.**
- Designing and setting up database for large enterprise software solutions.

|              |                                      |
|--------------|--------------------------------------|
| Client:      | Alcon Laboratories                   |
| Role:        | Analyst- IT Infrastructure           |
| Duration:    | July-2011 to Aug - 2015              |
| Database:    | SQLServer2000/2005/2008/2008 R2/2012 |
| Description: | Application Engineering              |

#### Key Result Areas:

- Prepared WI, SOPs, Database Architecture for Business intelligence, Database Administration
- Decommissioned and uninstalled SQL2000/2005/2008.
- SQL Server Upgrades from SQL Server 2000/2005 to SQL Server 2005/2008/2012.
- Performed the Daily Activities like Health Check
- Created and configured an OLTP replication database for disaster recovery purpose.
- **Worked on SSIS, SSAS and SSRS.**
- Performed the maintenance task such as Database file stripping, Partitions on Table and Index Maintenance.
- Worked on:
  - Creating the Partitions of File groups, Schemas and Functions
  - Remediate User Access with IGM
  - Preparing the Security Base Line scripts and Deploying across all the servers
- Took the Daily Hurdle's and provided the management information daily by pulling the CCR and Incident Reports.
- Participated in CCB and providing suggestions to effectively close the CCR's and to follow the Good Documentation Process
- **Migration of SQL Server Database to Oracle 11G Environments.**
- Planning and Implementations of latest database service patch and hotfix.
- Changing the Collation Setting's at the server level and database level.

|             |                            |
|-------------|----------------------------|
| Client      | Humana Health Care         |
| Role        | Sr. Process Associate      |
| Duration    | March 2007 to January 2010 |
| Database    | SQLServer2005/2008         |
| Description | Application Support        |

#### Key Result Areas:

- Worked on Citrix Based Web Applications and SQL Server of Client
- Configuring Database mail SQL Server 2005/2008
- Managed:
  - Loading and Maintenance of demographic information
  - Maintenance of Directory systems
  - Products such as Commercial-HMO, Commercial-PPO, Medicare-
  - HMO, Medicare-PPO, Medicaid and Reprising entities
  - Setting up logic in the systems to identify non-PAR providers and services.
