Senior Java Developer | Spring Boot | AWS | Microservices | DevOps

Summary:

- **Senior Java Developer** with **10+ years** of experience in designing, developing, and deploying large-scale enterprise applications across **banking, healthcare, and hospitality** domains.
- Expert in **Java 8–17, Spring Boot, Spring Cloud, RESTful microservices**, and **event-driven architectures** using **Kafka** and **RabbitMQ**.
- Proficient in **AWS (EC2, ECS, EKS, Lambda, S3, RDS, CloudWatch)** and **GCP (Cloud Run, Cloud SQL, Pub/Sub)** for building **scalable, fault-tolerant microservices**.
- Strong experience in **containerization (Docker, Kubernetes)** and **CI/CD automation (Jenkins, GitLab CI, GCP Cloud Build)**.
- Hands-on with **Terraform, CloudFormation**, and **Chef** for Infrastructure as Code (IaC) and automated deployments.
- Skilled in **Spring Security (OAuth2, JWT, SAML, RBAC)** for secure authentication and authorization in cloud-native systems.
- Experienced with **databases** such as **Oracle, MySQL, PostgreSQL, MongoDB, Cassandra**, and **Elasticsearch** for analytics and real-time dashboards.
- Proficient in building **batch jobs** with **Spring Batch, multi-threaded services**, and **asynchronous message pipelines**.
- Implemented advanced monitoring and alerting using **Prometheus, Grafana, Splunk, Kibana**, and **Datadog** for proactive issue management.
- Collaborative Agile developer with strong expertise in **API design, DevOps, system integration**, and **performance tuning** across distributed microservices environments.

Skills:

- **Core Java & Frameworks:** Java 8/11/17, Spring Boot (Microservices, Security, MVC, Cloud, Batch, AOP), Spring MVC, Hibernate, JPA, Resilience4j, Feign Client, RESTful & SOAP APIs, Multithreading
- **Cloud & DevOps:** AWS (ECS, EKS, Lambda, EC2, S3, RDS, CloudWatch, SNS, SQS), GCP (Cloud Run, Cloud SQL, Pub/Sub), Docker, Kubernetes, Jenkins, GitLab CI/CD, Terraform, CloudFormation, Ansible, Maven, Gradle
- **Security:** Spring Security (JWT, OAuth2, RBAC), API Gateway, AWS IAM, SSL/TLS, OWASP, SAML
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, ActiveMQ, Mule ESB
- **Databases:** Oracle 19c, MySQL, PostgreSQL, MongoDB, Cassandra, Redis, Elasticsearch
- **Monitoring & Logging:** Splunk, Kibana, Prometheus, Grafana, ELK Stack, AWS CloudWatch
- **Testing & Tools:** JUnit 5, Mockito, TestNG, Cucumber (BDD), Postman, Swagger, SonarQube
- **Version Control & Collaboration:** Git, Bitbucket, GitHub, JIRA, Confluence, Nexus IQ
- **Methodologies:** Agile / Scrum, TDD / BDD, DevOps, Continuous Integration & Delivery

Education Details:

- **Masters from** Southern Arkansas University in Major - Computer information & science, USA
- **Bachelor's** from Osmania University Major- bachelor's Computers & IT

Professional Experience:

Hilton Vacations, United States

Apr 2024 to Present

Role: Senior Java Developer

Domain: Hospitality & Travel

Project: Cloud-Based Booking and Rewards Platform

A microservices-driven hospitality platform built on AWS to handle bookings, rewards, and payment transactions.

Key Responsibilities:

- **Designed and developed** high-performance **Spring Boot and Java 17 microservices** for booking, rewards, and payments.
- Created **RESTful APIs** integrated with **AWS Lambda**, **ECS Fargate**, and **RDS Aurora** for real-time data processing.
- Leveraged **Spring Cloud Config**, **Eureka**, and **Feign Client** for centralized config and inter-service calls.
- Implemented **asynchronous processing** using **Kafka Topics** for booking confirmations and loyalty updates.
- Applied **Spring Security**, **JWT**, and **OAuth2** for secure user access and PCI-DSS compliance.
- Containerized services using **Docker** and deployed to **Kubernetes (EKS)** with rolling updates.
- Automated CI/CD pipelines with **Jenkins + GitLab CI**, reducing manual releases by 40 %.
- Integrated **legacy Oracle systems** with **Spring REST Template** and **Node.js middleware**.
- Tuned database queries with **Hibernate JPA**, batch fetching, and second-level cache for 35 % faster reads.
- Added **Resilience4j circuit breakers** and **retry policies** to handle transient failures gracefully.
- Configured **API Gateway** throttling and routing for 50 K + requests per minute.
- Monitored transactions using **Elasticsearch**, **Kibana**, and **AWS CloudWatch** dashboards.
- Enforced code quality via **SonarQube**, **Jacoco**, and **Checkstyle** achieving 90 % coverage.
- Collaborated with **React and Angular** teams to integrate REST endpoints for booking UX.
- Led sprint planning, peer reviews, and mentored junior engineers on microservice best practices.

Client: State of Michigan, United States

Sep 2023 to March 2024

Domain: Healthcare – Medicaid Modernization

Role: Senior Java Developer

Project: State Medicaid Eligibility and Claims Processing System

A modernization program converting legacy mainframe apps to Spring Boot microservices on AWS.

Key Responsibilities:

- Built modular **Spring Boot microservices** for eligibility, enrollment, and claims processing.
- Designed **REST and GraphQL APIs** using **Spring MVC and WebFlux** for high throughput.
- Integrated **Kafka and RabbitMQ** to implement event-driven claims workflows.
- Deployed services on **AWS EKS** with **Terraform IaC**, ensuring repeatable environments.
- Applied **Spring Cloud Gateway** and **OAuth2** for secure API management.
- Configured **Spring Cloud Config Server** and **Feign Client** for dynamic service resolution.
- Utilized **PostgreSQL and MongoDB** for hybrid data storage and audit logging.
- Implemented **Resilience4j retry and bulkhead patterns** to improve fault tolerance.
- Set up continuous deployment with **GitLab CI/CD and SonarQube** quality gates.
- Implemented batch jobs via **Spring Batch** for periodic claims reconciliation.
- Secured PHI data using **AES encryption**, **TLS**, and **Spring Security** policies.
- Created real-time dashboards with **Prometheus and Grafana** for API health monitoring.
- Developed custom validators and exception handlers to enhance error transparency.
- Optimized JPA queries and added **Redis caching**, cutting response times by 25 %.
- Documented design patterns and integration flows in **Confluence** for knowledge transfer.

Client: Bank of America, United States

Feb 2023 to Aug 2023

Role: Senior Backend Java Developer

Domain: Banking & Finance

Project: Digital Payments and Fraud Detection Platform

A real-time payments system using Spring Boot microservices and Kafka event streams.

Key Responsibilities:

- Engineered **Spring Boot microservices** for fraud alerts, transaction validation, and audit logging.
- Developed **RESTful and SOAP APIs** integrating Java and legacy .NET systems.
- Integrated **Apache Kafka** for asynchronous event propagation across payment pipelines.
- Configured **Spring Security OAuth2 and JWT** for token-based authentication.
- Deployed containerized apps on **AWS ECS and Lambda**, improving scalability by 30 %.
- Implemented **Redis and Hazelcast** for distributed caching and session management.
- Automated build and release with **Jenkins and Maven**, integrating with **SonarQube**.
- Wrote JUnit and Mockito tests achieving 85 % coverage and stability across modules.
- Optimized SQL queries and indexes in **Oracle and PostgreSQL** for sub-second lookups.
- Integrated **Spring Cloud Sleuth and Zipkin** for distributed tracing and latency analysis.
- Built data loaders using **Spring Batch** for ETL and nightly reporting jobs.
- Deployed monitoring stack (**CloudWatch, Splunk, Grafana**) for real-time alerting.
- Implemented API rate limiting and input sanitization to mitigate security risks.
- Refactored monolithic modules into microservices, reducing codebase complexity by 25 %.
- Collaborated with DevOps teams for pipeline integration and incident postmortems.
- Wrote unit test cases for server-side applications using **JUnit5** and **Mockito** framework, ensuring code quality and reliability.

Client: Ally Financial, Hyderabad, India

June 2018 to Aug 2022

Role: Software Engineer

Domain: Banking/Finance

Project: Customer Onboarding and Trading Platform

The project focused on building a secure and scalable customer onboarding and trading management platform for Ally Financial's retail banking division. It enabled users to register, manage accounts, and execute trading operations online with real-time updates and seamless integration with backend financial systems. The application was modernized from legacy Struts-based architecture to a Spring Boot microservices model deployed on AWS Cloud to improve performance, scalability, and availability.

Key Responsibilities:

- Designed and developed customer-facing **registration and login modules** using **JSP, HTML, CSS, and JavaScript**, ensuring responsive and user-friendly interfaces.
- Built and deployed **Spring Boot microservices** on **AWS (EC2, S3, VPC)** with **auto-scaling and high availability**.
- Integrated **Kafka** and **RabbitMQ** for asynchronous data exchange and event-driven communication between distributed systems.
- Implemented **role-based access control (RBAC)** and authentication using **Spring Security**.

- Created and optimized **SQL/PLSQL scripts, stored procedures, and triggers** in **Oracle and PostgreSQL** databases for trading and customer data operations.
- Managed **API routing and load balancing** through an **API Gateway**, ensuring efficient traffic distribution and fault tolerance.
- Migrated legacy applications from **Struts 1.x/2.x, JSP, and Servlets** to **Spring MVC** for better modularity and maintainability.
- Developed and consumed **REST and SOAP APIs**, integrating with analytics and external trading systems.
- Automated build and deployment pipelines using **Jenkins and Kubernetes**; managed project dependencies through **Maven**.
- Ensured end-to-end security and compliance with **banking and financial data standards**, improving system reliability and scalability.
- Used **RabbitMQ** for asynchronous message queuing across distributed services.

Genpact, Hyderabad

Nov 2015 – May 2018

Role: Software Developer

Domain: Healthcare – Pharmacy and Claims Management

Project: Pharmacy Prescription Management System

A healthcare solution processing prescriptions and insurance claims for Walgreens clients.

- **Leveraged Angular2** resources for all data access, encapsulate URLs, and standardizing data access interfaces.
- **Designed and developed backend services using Java 8** and Spring Boot to manage key modules such as patient data, appointments, billing, and medical records.
- **Developed and integrated RESTful APIs** with Spring Boot to ensure efficient communication between microservices.
- Implemented **Spring Data JPA** for ORM mapping, with integration into **Azure SQL Database** for secure and scalable data persistence.
- Utilized **Azure Blob Storage** for secure storage of medical documents and data backups.
- Configured and managed backend services with **Azure Virtual Machines** and Azure App Services, ensuring scalability and high availability.
- Deployed microservices on **Azure Kubernetes Service (AKS)** to ensure containerized applications can scale efficiently.
- Implemented Azure Key Vault for secure management of secrets and sensitive configurations across services.
- Configured Azure Active Directory (AAD) for authentication and authorization, ensuring secure access control for users across services.
- Utilized **Azure Monitor to log, monitor, and troubleshoot** application health and performance metrics in real-time.
- Configured **Azure Load Balancer** to distribute traffic evenly across instances, ensuring high availability and fault tolerance.
- Used Terraform to provision and manage cloud infrastructure as code, supporting consistent environments across multiple stages (dev, staging, production).
- Developed a **single page, mobile-first, cross-device/cross-browser** web application for real-time location sharing utilizing **React JS, Angular JS** and JavaScript API.
- Created Mock Services and data to accelerate front-end development while awaiting RESTFUL APIs to be developed.
- Optimizing the code of **reusability** using the Decorators and **injecting** the services to access those in any
