

Vani Kamepalli

(443) 996-8618 | kamepallivani5@gmail.com | <https://www.linkedin.com/in/k-vani/> | Maryland, USA

Professional Summary

Versatile and results-focused Full Stack Java Developer with 8+ years of experience in designing, developing, and modernizing enterprise applications using Java/J2EE, Spring Boot, and Microservices Architecture. Strong expertise in backend development using Spring Framework (IOC, JPA, Actuator, Security) and Hibernate, along with frontend development using ReactJS, Angular (6–15), JavaScript, HTML5, and CSS3.

Proficient in migrating legacy monolithic applications, including those built with Struts and EJBs, into modern, scalable Spring Boot-based microservices, ensuring improved performance, maintainability, and cloud readiness. Skilled in creating reusable RESTful APIs and integrating third-party services using Spring MVC, JAX-RS, and Node.js.

Hands-on experience with SQL and NoSQL databases like Oracle, PostgreSQL, MySQL, and MongoDB, including complex query writing, performance tuning, and PL/SQL scripting. Extensive experience in batch processing and job scheduling using Control-M, AutoSys, and cron jobs for automating enterprise-level workflows and backend processing tasks. Familiar with cloud technologies, particularly Amazon Web Services (AWS), including EC2, S3, and RDS, for deploying and managing applications in cloud-based environments.

Solid understanding of DevOps tools and best practices, including Git, Jenkins, Maven, Gradle, SonarQube, Jacoco, and Docker. Experienced in unit testing and TDD using JUnit and Mockito, and working in Agile/Scrum environments with tools like JIRA, Pivotal Tracker, and VersionOne.

Strong computer science background with a deep understanding of data structures, algorithms, OOP, and design patterns, and comfortable working across Windows, Linux/UNIX, and macOS systems. Proven ability to deliver end-to-end solutions following the full Software Development Life Cycle (SDLC).

Education

Bachelor of Technology (B.Tech) in Electronics and Communication Engineering
Andhra University, India — Graduated: 2017

GPA: 8.8 / 10

Relevant Coursework: Data Structures, Object-Oriented Design, Software Engineering, Distributed Programming, Software Testing

Core Skills

Programming Languages & Scripting:

Java (JDK 1.8+), JavaScript, TypeScript, Node.js, AngularJS, Angular 2/4, SQL, PL/SQL

Java & J2EE Technologies:

JEE, Servlets, JSP, JSTL, JDBC, JNDI, JMS, RMI, EJB 2.0/3.0, JavaBeans

Frameworks & Libraries:

Spring Framework (Spring Boot, Spring MVC, Spring Data JPA), Hibernate, JUnit, Apache Axis, Swagger2

Frontend Technologies:

HTML5, DHTML, CSS3, JavaScript, jQuery, AJAX, JSON, XML, XSLT, XSD, DTD

Microservices & Middleware:

Spring Boot Microservices, RESTful APIs, SOAP Web Services, Kafka, IBM WebSphere MQ, Amazon SNS, Amazon SQS

Databases & Tools:

Oracle 10g/11g/12c, PostgreSQL 10.5, MySQL, Sybase, DB2 (8.2, 9.5), MS SQL Server, MS Access 2000

Tools: SQL Developer, Rapid SQL, Toad

Application & Web Servers:

Apache Tomcat, IBM WebSphere (v6.x, v7.x), BEA WebLogic (v8.x–v10.3.3), JBoss 4.2.2

Development Tools & IDEs:

Eclipse, IntelliJ IDEA, IBM Rational Application Developer (RAD), NetBeans, WebStorm

Build, CI/CD & Code Quality Tools:

Maven, Ant, Jenkins, SonarQube, Jacoco

Cloud & Messaging Platforms:

Amazon Web Services (AWS) – EC2, S3, RDS, SNS, SQS; Pivotal Cloud Foundry (PCF), Kafka

Job Scheduling & Batch Tools:

Control-M, AutoSys, Cron Jobs

Version Control Systems:

Git, SVN

Testing & API Tools:

JUnit, Mockito, Postman, SOAP UI

Modeling & Design Tools:

Rational Rose, Microsoft Visio

Project Management & Collaboration:

JIRA, SharePoint, Confluence

Operating Systems:

Windows, Linux (Red Hat), UNIX (Solaris, AIX, HP-UX), macOS

Professional Experience**FREDDIE MAC, VA**

Nov 2022 - Present

Full Stack Developer

Responsibilities:

- Works closely with Synchronous business teams, technical leads, design teams and development teams onsite/offshore to ensure delivery of application on time with no slippage and with high quality.
- Works on requirement gathering and analysis from the product owners, business stakeholders, architects, technical leads and translates them into technical requirements, design, and implementations.
- Each Micro component Designed and Developed Using Spring Boot application
- The Communication between two spring boot component using Rest Api call and Authenticated using OAuth 2 Protocol
- All Spring Boot Component End Point Register in Eureka Server
- Design reusable components, Redux, reducers, store, redux-thunk, Forms, Axios Router.
- Worked on Swagger API and auto-generated documentation for all REST calls.
- Worked on postman and ARC to test REST service calls.
- Product design and development using Java/J2EE technologies, Angular JS, Apache Wicket, REST Web Services, SOAP Web Services, JPA, Postgres, DB2, HTML 5, CSS 3.
- Creating and Executing test scripts for regression testing of web application.
- Developed applications that interact with Postgres data source.
- Created Docker images for several micro-services and wrote Docker-compose files for CI/CD pipeline. Develop Gitlab Runners for the docker containers.
- Created AWS S3 buckets to store data and utilized various AWS services like EC2, Route 53, IAM, Cloud Formation, Cloud Front, and Cloud Watch.
- Provide quality documentation and wiki updates for each feature that is delivered.
- Used OpenShift configurations to deploy the REST services in OpenShift clusters.
- Provide day to day technical guidance to the offshore team and work assignment, resolve any technical challenges on the way for them to ensure the quality and on time delivery of the product.
- Provide support for testing, defects fixing and maintenance of code base, code deployment, triage support and manage those items up through the pipeline to prod.

Environment/Tools: Java/J2EE, Spring boot, HTML5, CSS3, JavaScript, Swift, Angular, Gitlab, CI/CD pipeline, Docker, Runners, Spring boot, AWS, Apache Wicket, REST, RTC, SNOW, Eclipse, VS Code, Postgres, MSSQL, Postman, ARC, JSON, JIRA, Confluence, Bit bar,

UPTIK SOLUTIONS INC, TX (Client: Ally Bank)

Aug 2021 - Nov 2022

Java Developer

Responsibilities:

- Produced and consumed several REST API's, in fetching the data from Database, Stored Procedures and third-party API's.
- Used RxJava Library to handle asynchronous operations to enhance the response time of application.
- Used Liquibase with Gradle for tracking, managing and applying schema changes in Database.
- Debugged and resolved long standing performance related issue and improved the responsiveness of the application.
- Used Spring JPA as the ORM tool to communicate with the database and integrated with Spring to design domain model classes.
- Written multiple JPA queries/Native queries to fetch records from database.
- Used AWS SQS and SNS for queueing options to listen the events in an event-driven environment.
- Implemented component-based architecture in UI by building the library using custom directives in AngularJs, thus allowing to achieve code reusability across multiple applications.
- Involved in UX mockup reviews before being approved and drafted into the development.
- Translated UX wireframes/mockups to responsive web screens using AngularJS/Angular 2 frameworks.
- Knowledge on handling e2e tests and unit tests with Jasmine/Karma and Protractor.
- Integrated Kendo grid into the application and provided custom sorting and filtering actions to the user.
- Implemented unit test cases using Mockito Framework.
- Used H2 in-memory database for running the unit test cases.
- Deployed the artifacts of the applications using DevOps tools Jenkins, Sourcetree and Bitbucket.
- Worked in two-week sprint tracking the stories, technical tasks, bugs in JIRA
- Involved in peer code review, Integration testing.
- Mentored team members and offshore team and to escalate the immediate attention areas in development and testing for the time sensitive releases.
- All the backend functionality is implemented using Spring Boot, Spring transactions, Spring IOC, Spring Core.
- Used Jenkins for auto-deployment in all lower and production environments.
- Extensively worked with Oracle PL/SQL development and JDBC programs using Oracle and MySQL databases.
- Created multiple RESTful web services using jersey2 framework.

- Used POSTMAN for testing the web services, both in-house and external.
- Involved in bug fixing, enhancements and production support of various applications
- For the production issues, provided support by debugging the log files and fixing the code for the data issues.

Environment: Java/J2EE 8, Spring boot, Restful services, JDBC, H2, PostgreSQL, AngularJS, CSS, HTML, JavaScript, SQL, Spring JPA, JSON, Log4j, Tomcat, Eclipse, SVN, Maven, Gradle, Gulp, Junit, Postman. Jasmine/Karma, Jenkins, BitBucket, SourceTree, AWS (SNS/SQS, S3, EC2, RDS)

INFOSYS LIMITED, India (Client : Citi Bank, USA)

Dec 2017 – Jul 2021

Ful Stack Developer

- Responsibilities:
- Performed analysis for the client requirements based on the developed detailed design documents.
- Used Rest and SOAP web services and spring framework by developing the application in Agile.
- Methodology.
- Each Micro component Designed and Developed Using Spring Boot application
- The Communication between two spring boot components using Rest API call and Authenticated using Spring Security.
- All Spring Boot Component End Point Register in Eureka Server
- Used Hibernate for connecting to the database and mapping the entities by using hibernate.
- Annotations. Extensively used to access Hibernate in data access layer and used Hibernate Query. Language (HQL) for writing the queries.
- Worked extensively with Oracle database by writing native complex SQL queries and hibernate.
- Criteria.
- Implemented persistence layer using Custom DAOs to handle CRUD operations.
- GIT is the version control used to maintain project versions and worked with git-bash and source-tree for code manipulations.
- JIRA was the project management tool used to track user stories and HP ALM was used to track and log the defects.
- Agile methodology was followed, where work progress status was regularly monitored by daily.
- Scrum meetings, providing regular updates about the status of the project.
- Experience in continuous integration using Jenkins for timely builds, code coverage, running test.
- As a part of Quality assurance participated in the Code review process as a part of Quality
- Engineering Team.

- Analyzed web applications, documented detail Test plans, Test cases and expected results based on the business functional requirements.

Environment: Java 8, Spring boot, Hibernate, RESTFUL Services, JUnit, HTML, CSS, Postman, Maven, Jenkins, Tomcat Server, IntelliJ, Oracle.

Electronics Corporation of India Limited (ECIL), India July 2017 - Nov 2017
Software Engineering Intern

Responsibilities:

- Worked with the business analysts to understand the requirements and produce the new functionalities to the product by using design patterns, micro services.
- Developed the application using Agile and Scrum methodology of project management and used software development process behavior-driven development (BDD)
- Developed web application using Symfony3 framework.
- Wrote Doctrine behaviors, tasks for the database mappings, predominantly the many-to-many mappings.
- Created and deployed dynamic web pages using HTML5, jQuery, Ajax, JavaScript, CSS3.
- Used apache-poi jars for extracting records from the huge xml files automatically by creating the entity classes in java and process them to do some calculations with the data.
- Produced and consumed the RESTFUL API's by using the HTTP methods GET, PUT, POST, DELETE and HEAD to interact with the database and worked with the application by using the JSON format.
- Used MySQL database and SVN for source code version control system.
- Implemented time-based job schedulers using software utility cron in Unix operating system.
- Used JFreeChart library to generate charts in vector graphic SVG format with data derived from XML files.
- Wrote customized XSL stylesheets to convert formatted XML to PDF files.
- Used Unix shell scripts to deploy the application on amazon web server.
- Used jQuery to perform the AJAX calls and to load the surveys.
- Identifying and troubleshooting client issues then documenting solutions and developing QA procedures
- Ensure exceptional code quality and thorough testing (both at unit and system integration level) on every newly developed feature.
- Used Jira and Rally as issue trackers for updating daily tasks for agile development.
- Configured, supported, and maintained all networks, storage, load balancers, operating systems, and software in AWS EC2.
- Provided technical problem resolution for overly complex problems.

Environment: Core Java, J2EE, Spring, Servlets, Hibernate, CSS, HTML, GIT, XML, AJAX, Angular JS, Eclipse, JUnit, JavaScript, Oracle, IBM WebSphere, PL/SQL, Scrum, Restful Web Services, ANT, Eclipse, Windows.
