

Venkata Sai Kiran Chirthani

Sr. Business Intelligence Developer

618-210-7935 | Chirthanivenkatasai@gmail.com | Cypress, TX | [LinkedIn](#)

SUMMARY

Senior Business Intelligence Developer with 7+ years of experience in designing, developing, and maintaining Data Warehousing and Business Intelligence solutions. Proficient in SSIS, SSRS, SSAS, and modern BI tools like Power BI, Power Automate, and Azure Data Factory for seamless end-to-end workflows. Skilled in ETL processes, data analysis, database design, and development of scalable business applications, with expertise in OLTP, OLAP, and advanced Data Warehousing concepts. Hands-on experience in building SSAS cubes, creating perspectives, partitions, aggregations, and implementing Row-Level Security to deliver secure and user-centric analytics. Extensive knowledge of Power BI, including calculated fields, hierarchies, transformations, sets, groups, parameters, and paginated reports, along with expertise in developing canvas Power Apps integrated with SQL Server, SharePoint, and Power BI for real-time CRUD operations and workflow automation. Adept in leveraging cloud platforms like Azure Synapse Analytics and AWS Redshift for modern data warehouse solutions. Demonstrates a strong focus on project delivery within deadlines, adaptability to new technologies, and the ability to translate complex data into actionable insights for driving organizational growth.

SKILLS

Methodology	SDLC, Agile, Waterfall
RDBMS/Databases:	MSSQL Server 2000/2005/2008/2012, Snowflake, AWS Redshift, Oracle 8i & 9i, Sybase, MS Access 97/2000/2003/2007, MYSQL
Programming Languages:	T-SQL, PL/SQL, DAX, Dynamic SQL, C, DHTML, Shell Scripting, Visual Basic 6.0
Data Modeling:	MS Visio, ERWIN 4.5/4.0, Facts & Dimensions tables, Physical & Logical data modeling, Star Snowflake schema Relational, Dimensional and multidimensional modeling and Denormalization Techniques, MS-Access
ETL Tools:	Server Integration Services (SSIS 2005/2008/2012), Power Automate
Tools/Database Utilities:	SQL Server Management Studio, SQL Server Enterprise Manager, SQL Server Profiler, Import Export Wizard, Dbeaver
Operating Systems:	Windows, Linux

EXPERIENCE

Republic Services, USA | Sr. Business Intelligence Developer

July 2022 - Current

- Gathered and refined requirements from customers to develop reports, functions, procedures, and packages implementing business logic using SQL and Flows.
- Created and maintained databases in the Denodo platform using SQL, ensuring daily data updates through Power Automate runs.
- Planned and implemented the architecture of PowerApps, Power Automate Flows, and Power BI interfaces for efficient data flow and refreshes.
- Designed and managed SharePoint lists, creating Power Automate Flows to migrate data to on-premises legacy systems, scheduling runs per business requirements, and supporting job execution.
- Developed PowerApps integrated with data sources like SharePoint, Denodo, and AWS Redshift for various use cases, including field data entry, IT metrics tracking, and sensitive client information submission.
- Implemented core functionalities in PowerApps, such as gallery controls, navigation, CRUD operations, containers, and collection management, while integrating buttons to trigger Power Automate flows.
- Designed Power Automate Flows for tasks like auto-generating HTML files, multi-stage approvals, and transferring data between SharePoint and SQL Server, ensuring seamless integration between multiple sources.
- Built advanced Power BI reports using data sources like Snowflake, SharePoint, Denodo, and tabular models, including complex data cleansing, modeling, and measure creation for actionable insights.
- Incorporated features like Custom Tooltips, Bookmarks, and Drill-through filters in Power BI reports while implementing Row-Level Security (RLS) to restrict data visibility based on user roles.
- Deployed Power BI reports and dashboards through Power BI Service, created enterprise-level apps, and assigned Active Directory groups for secure access.
- Scheduled and maintained data refresh workflows in Enterprise Gateway, ensuring Power BI report updates align with automated data flows and system integrations.
- Supported database migration, report migration, and PowerApps migration during acquisition projects, collaborating with enterprise data and analytics teams for seamless transitions.

US ANESTHESIA PARTNERS, USA | Business Intelligence Developer**Oct 2018 - June 2022**

- Involved in planning, defining, designing data based on business requirements and provided documentation for further reference. Involved in installation and configuration of MS SQL Server 2016.
- Planned, defined, and designed databases based on business requirements, providing detailed documentation for reference, and installed/configured MS SQL Server 2016.
- Designed databases using Erwin Data Modeler to create conceptual, logical, and physical data models, performing forward engineering to implement designs.
- Created and maintained database objects such as tables, stored procedures, constraints, and indexes to ensure referential data integrity.
- Developed and executed ETL processes using SSIS to extract, transform, and load data from various sources like Excel and flat files into MS SQL Server, incorporating advanced transformations like SCD, Aggregate, and Conditional Splits.
- Migrated SSIS and SSRS solutions to Amazon Redshift, building Power BI reports using Redshift as the data source and converting existing SSRS reports into Power BI dashboards by replicating SQL logic in DAX.
- Created and deployed SSAS cubes, dimensions, and data source views, implementing aggregations, partitions, and data mining models for advanced analytics.
- Designed and developed interactive reports using SSRS, including sub-reports, drill-down, drill-through, and parameterized reports, and accessed these through Power Apps for user interaction and report downloads.
- Built and maintained Power Apps integrated with data sources like SQL Server and AWS Redshift for CRUD operations, implementing canvas app formulas and features like button-triggered flows and database updates.
- Integrated Power Apps with Power BI to enable data entry, update, and delete operations in SQL databases directly from Power BI reports, enhancing user interaction and workflow efficiency.
- Optimized database performance by tuning SQL queries, checking table fragmentation, re-indexing tables, and implementing steps to improve user response times and application performance.
- Developed and deployed SSIS packages for data cleansing, multi-file loading, master-child tasks, and error handling, scheduling jobs for daily, weekly, and monthly updates across environments.
- Documented processes, databases, stored procedures, SSIS packages, and all related tasks for future maintenance and reference, ensuring thorough and accessible records.
- Utilized TFS to maintain version control of scripts, avoiding data loss, and deployed database and ETL solutions across development, QA, and production environments with thorough validation and testing.

Northwestern Mutual, USA | SQL/BI Developer**March 2017 - Oct 2018**

- Collaborated with the Enterprise Data and Analytics team to perform data analysis and provide actionable insights on client and field applications, contributing to informed decision-making.
- Gathered requirements, analyzed business rules, defined data sources, and implemented data model designs in MS SQL Server 2012, ensuring alignment with business objectives.
- Managed database migration projects, transitioning from SQL Server 2012 to SQL Server 2016, including creating test databases, updating SSIS jobs, and validating the new environment.
- Automated data integration from diverse sources using PowerShell scripting and REST API calls, and developed SSIS packages with advanced transformations, error handling, and tasks such as Conditional Split, Lookup, Merge Join, and For Each Loop Container.
- Designed and developed SSAS cubes and tabular models by implementing Snowflake, Star, and Multi-Fact schemas, creating calculated columns and measures using DAX language, and enforcing row-level security.
- Built and scheduled SSIS jobs to automate SSAS tabular model refreshes, implemented master-child packages, and ensured seamless daily data processing.
- Connected live data from tabular models to Power BI, developed interactive reports and dashboards, managed workspaces for development and production environments, and published dashboards via Power BI Service.
- Consolidated data sources from various environments into a unified enterprise Power BI gateway, scheduling refreshes and maintaining robust reporting pipelines.
- Developed and implemented Power Apps for business users to update SharePoint lists using SQL databases as data sources, creating connections, buttons, data cards, and galleries to streamline user interactions.
- Managed version control using GitHub, maintaining repositories and managing merge requests for SQL code, Power BI templates, and tabular model solutions to ensure efficient collaboration.
- Created a leave request management system using Power Apps, enabling users to submit requests, triggering automated email notifications upon manager approvals, and integrating with SQL databases.

EDUCATION**Master in Electrical and Computer Engineering | Cleveland State University, Cleveland, OH**
