

Venkata Narayana Guntupalli

.net Full Stack Developer

Phone: (316) 512-8863 | Email: vnnguntupalli99@gmail.com

EDUCATION:

Wichita State University, Masters in Data Science, USA from 2021- 2023

TECHNICAL SKILLS:

Programming Languages: C#, Java, Python, VB.NET, JavaScript, TypeScript, SQL.

Frameworks: .NET Core, ASP.NET MVC, ASP.NET Web API, Entity Framework, LINQ, Blazor

Front-End Technologies: HTML5, CSS3, JavaScript, jQuery, NodeJS, Angular, React, Bootstrap, Sass

Databases: Microsoft SQL Server, MySQL, PostgreSQL, T-SQL, MongoDB, Oracle.

Web Services: RESTful Services, SOAP, GraphQL, JSON, XML

Tools: Visual Studio, Visual Studio Code, Git, GitHub, Jira, Tortoise SVN, Microsoft Planner, SharePoint, Outlook, Azure DevOps, Docker, Jenkins

Cloud Technologies: Microsoft Azure, AWS, GCP, SAAS.

Testing Tools: NUnit, Selenium, xUnit, MS Test, Moq, Unit test

Software Development: Agile (Scrum/Kanban), SDLC, TDD, CI/CD, mobile development, web design, cloud technologies.

Other Technologies: SignalR, WPF, Xamarin, Razor Pages, Redis Cache, RabbitMQ, Dapper ORM, Elasticsearch

CI/CD: Docker, Kubernetes, Jenkins, Azure DevOps Pipelines.

Authentication & Security: OAuth 2.0, JWT, OpenID Connect, SAML

Monitoring & Debugging: Application Insights, Profiling Tools

Reporting & ETL Tools: SSRS, SSIS, Crystal Reports

Front-end Technologies: HTML5, CSS3, JavaScript, TypeScript, Angular,

Dedicated .NET Developer with 5+ years of experience in designing, developing, and deploying scalable and efficient web and desktop applications. Proficient in .NET Core, ASP.NET, C#, and SQL, with a strong focus on delivering high-quality software solutions

PROFILE SUMMARY:

- **5+ years of experience** in developing and maintaining web applications using **.NET Core, ASP.NET, C#, MVC, and Web API**.
- Expertise in front-end development using **Angular, React, HTML5, CSS3, JavaScript, TypeScript**, and **Bootstrap** to build responsive and dynamic user interfaces.
- Proficient in back-end development with **.NET Core/ASP.NET**, developing RESTful services and microservices architectures.
- Strong knowledge of **SQL Server, Entity Framework**, and **LINQ** for database design, querying, and data management.
- Experience with **cloud platforms** such as **Microsoft Azure**, including deployment, **CI/CD** pipelines, and working with services like **Azure Functions, App Services**, and **Blob Storage**.
- Solid understanding of **API integration** and development of **SOAP/RESTful APIs**, skilled in **version control** using **Git** and experience with **Agile/Scrum methodologies** for effective project.
- Knowledge of **DevOps practices**, including using tools like **Docker, Kubernetes**, and setting up **CI/CD pipelines** in **Azure DevOps**.
- Strong problem-solving skills with a focus on performance optimization, debugging, and ensuring application security.
- Experience in **unit testing** with **XUnit, NUnit**, and **Moq** to ensure high-quality, maintainable code and developed and maintained rich desktop applications using **Windows Forms**, delivering complex UI solutions with advanced event handling and custom controls.
- Created and consumed **WCF** services for seamless integration of distributed system and experienced in implementing **AJAX** for asynchronous data fetching and seamless user interactions, enabling real-time updates and improved performance in web applications.
- Strong knowledge of **.NET security best practices**, including **authentication** and **authorization** using **ASP.NET Identity, OAuth, JWT**, and implementing **encryption, secure coding standards**, and **data protection** to ensure application security and compliance and designed and implemented responsive and user-friendly web applications using **ASP.NET Web Forms**.
- Experience in generating Custom Reports and different types of **Tabular, Matrix** and distributed reports in multiple formats using **Crystal Report** and Developed serverless applications using **AWS Lambda** and **Amazon API Gateway** for scalable and cost-efficient solutions, integrating with **AWS DynamoDB** for fast NoSQL database access.

WORK EXPERIENCE:

South Carolina Department of Juvenile Justice| Systems Programmer/Developer South Carolina | (Jan 2025 – Present)

Description: The South Carolina Department of Juvenile Justice (DJJ) is a state cabinet agency dedicated to serving youthful offenders' primary responsibilities, include providing custodial care and rehabilitation for children. Designing database schemas, writing SQL queries, and performing CRUD (Create, Read, Update, Delete) operations and Creating databases for website optimization, Writing clean codes for smartphone apps, and Designing websites and UIs.

Responsibilities:

- Developed and maintained web applications using **ASP.NET Core**, **C#**, and **MVC architecture** to support juvenile justice management operation and designed and implemented dynamic, responsive user interfaces using **HTML5**, **CSS3**, **JavaScript**, **TypeScript**, and frameworks like **Angular** and **React** for seamless user experience across multiple devices.
- Created and optimized **RESTful APIs** for secure data exchange between juvenile justice systems and integrated **SQL Server** for database management, including stored procedures and query optimization.
- Implemented and maintained **Entity Framework** for efficient ORM mapping and database interactions, ensuring smooth data handling for case management system and utilized **Azure DevOps** and **Git** for version control, automated deployment pipelines, and ensured seamless integration of new features into the juvenile justice applications.
- Ensured system reliability and quality through **unit testing**, integration testing, and debugging using tools like **xUnit** and **NUnit** to ensure accurate case tracking and reporting and enhanced application security with **OAuth**, **JWT**, and **Active Directory** integration to provide secure authentication and role-based access control for sensitive juvenile data.
- Applied **microservices architecture** for modular and scalable development, ensuring maintainable and distributed applications for case management and youth rehabilitation services and integrated **Web API** and **WCF Services** to enable communication between juvenile justice modules and third-party systems for data sharing and reporting.
- Implemented **NoSQL databases** like **MongoDB** for efficient management of unstructured data, improving performance in case file retrieval and reporting and leveraged **RabbitMQ** and **Azure Service Bus** for handling asynchronous messaging and event-driven processing, optimizing workflows for case updates and notifications.
- Integrated third-party APIs and services for automated reporting, case management, and scheduling functionalities within the juvenile justice system and utilized **Docker** and **Kubernetes** for containerization and orchestration of application deployments across cloud environments, ensuring flexibility and scalability.
- Developed real-time case tracking features using **SignalR** and **WebSocket** for live updates on case status and court proceedings and utilized **Power BI** for creating dynamic dashboards and reports, enabling data-driven decision-making for juvenile justice administrators and stakeholders.
- Employed **Redis** for caching frequently accessed data, improving performance and reducing strain on core case management systems and automated deployment pipelines using **Jenkins**, **TeamCity**, and **GitHub Actions** for continuous integration and efficient release management in juvenile justice applications.
- Provided **production support** and implemented **GraphQL** for optimized data querying, improving the performance of financial reporting and resource allocation modules within the department.

Environment: ASP.NET Core, MVC architecture, HTML5, CSS3, JavaScript, TypeScript, Angular, React, RESTful APIs, SQL Server, OAuth, JWT, CI/CD, Azure DevOps, Git, MongoDB, Couchbase, RabbitMQ, Docker, Kubernetes, WebSocket's, Power BI, Jenkins, GitHub Actions, GraphQL.

Prisma Health| .net Full Stack Developer South Carolina, USA | (April 2023 – Dec 2024)

Description: Prisma Health is a private, nonprofit health organization and the largest healthcare provider involved in education and research, partnering with medical, nursing, pharmacy, and allied health schools to train healthcare professionals. As a .NET Full Stack Developer, responsible to bridge the gap between graphical design and technical implementation, taking an active role on both sides and defining how web applications look and work.

Responsibilities:

- Developed and maintained **WinForms** desktop applications to optimize internal processes and enhance patient data management within Prisma Health systems.

- Developed interactive user interfaces using **Angular** and **React**, ensuring responsive design and cross-browser compatibility for hospital management systems and implemented data access layers using **Hibernate** and **JPA**, ensuring seamless integration with **Prisma Health** hospital databases for efficient data handling.
- Worked with relational databases like **PostgreSQL** and **MySQL** to design data schemas, optimize queries, and manage medical record storage systems effectively and utilized **AWS** for application deployment, storage, and serverless architecture, ensuring scalable and efficient IT solutions for Prisma Health.
- Designed and developed responsive web applications using **ASP.NET Core** and **ASP.NET Web Forms**, ensuring seamless and user-friendly experiences for both hospital staff and patients, Wrote complex **SQL** queries for data extraction, manipulation, and reporting, supporting healthcare analytics and decision-making for Prisma Health management.
- Set up and maintained **CI/CD** pipelines using **Jenkins** for automated testing and deployment, facilitating smooth rollouts of hospital management software and wrote unit and integration tests with **JUnit** and **Mockito**, improving the reliability and quality of healthcare applications used by Prisma Health.
- Used **Git** for version control, streamlining development and collaboration among teams at **Prisma Health**.
- Collaborated with **UI/UX** designers and developers to enhance user experiences within healthcare applications, ensuring ease of use for staff and patients and participated in **Agile** methodologies such as **Scrum** and **Kanban** for efficient management of hospital software development projects and designed and implemented **serverless** applications using **AWS Lambda**, improving scalability and reducing operational costs for healthcare IT solutions.
- Integrated **AWS Lambda** with **Amazon RDS** and **DynamoDB** for efficient storage and retrieval of patient records, enhancing data access performance and implemented monitoring solutions using **AWS CloudWatch** to track **AWS Lambda** performance and ensure the reliability and health of hospital applications.
- Developed semantic **HTML5** markup and **CSS** stylesheets for web applications, ensuring accessibility and compliance with healthcare industry standards and built and deployed **progressive web apps (PWAs)** for mobile and desktop users, allowing patients and healthcare providers to access hospital services with offline capabilities and push notifications.
- Utilized **Docker** to containerize healthcare applications, simplifying deployment, and enhancing portability across different environments and cloud platforms and Integrated **Twilio API** for SMS and email alerts, ensuring timely communication between healthcare providers and patients about appointment reminders, test results, and medication updates and Developed and optimized **RESTful APIs** for seamless communication between various hospital systems, such as patient registration, billing, and medical records management.
- Integrated **Elasticsearch** for fast, advanced search functionalities, enabling healthcare staff to quickly access patient history, prescriptions, and medical records with optimized search performance and Employed **Terraform** to automate cloud infrastructure provisioning, ensuring consistent, repeatable, and efficient management of cloud resources for hospital IT systems.

Environment: WinForms, ASP.NET Core, ASP.NET Web Forms, SQL, Angular, React, Hibernate, JPA, CI/CD, Jenkins, Git, Junit, Mockito, UI/UX, Scrum, Kanban, AWS Lambda, AWS CloudWatch, HTML5, CSS, Elasticsearch, RESTful APIs.

Sonoco| .net Developer

Hartsville, South Carolina| (Dec 2021 – March 2023)

Description: Sonoco Products Company, is a global leader in sustainable packaging solutions offers a diverse range of products and services, including consumer packaging, industrial products, protective packaging, and packaging supply chain services. Using ASP.NET to create web applications that are top-notch and Designing reusable, effective, and scalable code and testing and debugging applications to ensure their quality and reliability.

Responsibilities:

- Developed and deployed **microservices** using **.NET Core** and **Docker**, ensuring scalability and fault tolerance for packaging solutions and supply chain management and created a product tracking platform using **React** and **Redux** for customers to monitor packaging production status, delivery schedules, and product specifications.
- Leveraged **Azure Functions** for serverless processing of data related to inventory management, automating tasks like order processing, shipment tracking, and packaging design updates.
- Implemented data encryption and masking techniques in **SQL Server** to protect sensitive business and client information, ensuring compliance with data protection regulation and integrated AI-powered customer support chatbots using **Microsoft Bot Framework** to assist clients with order inquiries, product details, and troubleshooting.

- Used **Kubernetes** to manage containerized applications for Sonoco's global operations, improving deployment efficiency and enabling autoscaling during high-demand periods, designed interactive dashboards using **Power BI** to provide management with real-time insights into packaging production efficiency, sales performance, and operational costs.
- Implemented data archiving strategies using **Azure SQL Database** and **Elastic Search** to optimize search capabilities and ensure smooth retrieval of historical product data and optimized **SQL Server** stored procedures to handle large-scale manufacturing data processing, reducing retrieval times and improving overall system performance.
- Built a feedback system using **.NET Core** and **Angular** to enable customers to provide feedback on packaging solutions and improve service quality and implemented real-time notification services using **Twilio** and **SignalR**, providing clients with timely updates on production status, shipments, and order processing.
- Built an e-commerce platform using **.NET Core**, **React**, and **Twilio** for seamless customer engagement and online order processing of Sonoco's packaging products and developed payment gateway integration using **Stripe** and **PayPal APIs** to enable secure and seamless online transactions for Sonoco's packaging solutions.
- Employed **CI/CD pipelines** with **GitLab CI** and **Azure DevOps** for automated testing, building, and deployment of Sonoco's web applications, ensuring consistent quality and reliability, enhanced search functionality within Sonoco's customer portal using **Elasticsearch**, enabling faster access to product catalogs, order history, and production timelines.

Environment: .NET Core, Docker, React, Redux, AI-powered chatbots, Azure Functions, SQL Server, Microsoft Bot Framework, Kubernetes, Azure SQL Database, Elastic Search, Angular, Twilio, SignalR, Stripe, PayPal APIs, CI/CD pipelines, GitLab CI.

City Union Bank| .net Developer Chennai, India | (June 2019 – July 2021)

Description: City Union Bank Limited, established on October 31, 1904, is a prominent private sector bank serving the banking needs of individuals and businesses, with a strong emphasis on customer service and financial inclusion. I am involved in designing, coding, testing, and deploying applications, as well as providing technical support and maintaining software throughout its lifecycle and use NET technologies to create both the frontend and backend of web applications.

Responsibilities:

- Developed and maintained **enterprise applications** for banking processes using **ASP.NET Core**, **C#**, and **Entity Framework**, ensuring seamless integration between customer management, transaction processing, and loan modules.
- Designed and implemented **RESTful APIs** for secure data exchange between banking systems and third-party applications, improving communication and operational efficiency across departments.
- Developed a centralized **account management system** using **SQL Server** and **ASP.NET Core**, optimizing tracking and management of customer accounts, loans, and financial products and designed and developed a real-time **dashboard** using **Power BI** to monitor key banking metrics such as account balances, loan approvals, and transaction volumes.
- Implemented **role-based access control (RBAC)** and **OAuth 2.0** for secure user authentication and authorization in the banking system, ensuring compliance with financial regulations and industry standards.
- Built a **microservices architecture** using **.NET Core** and **Docker**, improving scalability and fault tolerance of banking applications for loan processing and transaction management.
- Integrated **core banking systems** with external partners using **SOAP** and **RESTful web services**, streamlining the processing of payments, fund transfers, and loan disbursements and developed a **mobile application** using **Xamarin** to allow banking customers to manage accounts, transfer funds, and receive alerts on-the-go.
- Developed automated **transaction processing systems** for customer payments using **ASP.NET Core** and **Angular**, improving efficiency and reducing manual errors in payment workflows, implemented **data visualization solutions** for management to analyse financial performance, transaction trends, and loan portfolio health using **Power BI** and **Excel**.
- Collaborated with cross-functional teams to integrate **CRM systems** with banking sales and distribution channels, streamlining customer service and financial product offerings and Integrated **AI-powered chatbots** using **Microsoft Bot Framework** to assist customers with account inquiries, transaction history, and loan information, enhancing customer engagement and support efficiency.

Environment: ASP.NET Core, C#, RESTful APIs, SQL Server, Power BI, OAuth 2.0, Docker, SOAP, Angular, Excel, CRM systems
