

Venkata Vamsi
Senior Java Full Stack Developer

Summary:

- Full stack Developer with 10+ years of IT experience in analysis, design, development, documentation, implementing of web applications.
- Expertise in designing and developing enterprise and web applications from design blueprint using java and J2EE technologies like **Core Java, JSP, Java Script, JDBC, Web Services, Spring, Hibernate, REST, XML, SQL, HQL, XSL, HTML, CSS and LOG4j.**
- Experience in working with open-source frameworks like **Spring, Spring Boot**, ORM frameworks like **Hibernate and Spring JPA.**
- Experienced with hands on development in various Spring components like **Spring MVC, AOP, Spring IOC, Spring JDBC, Spring-Data, Spring JPA, Spring Cloud Spring Securities and Spring Batch, Spring Boot, Spring Microservices, and swagger API's.**
- Designed and implemented **Kafka** producers and consumers for real-time data processing, ensuring efficient data flow between microservices.
- Expertise in containerization of the application using **Docker.**
- Deployment experience with **AWS technologies** like **VPC, ELB, RDS, EC2, Cloud Watch, Cloud Formation, Security Groups, S3 and Dynamo DB.**
- Developed and maintained message-driven microservices using **RabbitMQ** for reliable message queuing and asynchronous communication.
- Involved in development, design and implementation front-end using **HTML5, CSS3, jQuery, JavaScript, AJAX, JSON, Angular 16, React JS, NodeJS and Bootstrap**
- Proficient in **Database Design, SQL queries, stored procedures, functions, and triggers.**
- Experience with application servers like **IBM WebSphere, WebLogic, JBoss, and Apache Tomcat.**
- Skilled in **Struts** framework, **JSP** pages, and **Struts tag library.**
- Developed and deployed Java-based web applications using **Azure App Service** for auto-scaling and high availability.
- Experience in creating build scripts using **Gradle** and **Maven.**
- Strong **TDD** (test driven development) and continuous integration experience using **JUnit, Mock Framework, Mockito.**
- Experience in creating end-to-end and integration test cases using **Selenium, Cucumber, Selenium Web Driver, JMeter.**
- Strong Experience with version control tools such as **SVN, Git, Bitbucket and GitHub.**
- Familiar with Agile methodologies (SCRUM, TDD, Incremental & Iteration Methodology, Pair Programming) and Waterfall model; used JIRA for tracking.
- Excellent communication, interpersonal, analytical, problem-solving, and decision-making skills.

Technical Skills:

Programming Languages	JAVA 8, 11 and 17, JavaScript and TypeScript.
Web Development	Node. HTML5, CSS, Bootstrap, jQuery, Angular 16, React JS
Databases	Oracle SQL, SQL/MySQL, Mongo DB, Dynamo DB, PostgreSQL, Cassandra
Application Frameworks	Spring IOC, Spring MVC, Spring JDBC, Spring Security, Spring Cloud, Spring Boot, Microservices, Spring Batch, Hibernate ORM
Cloud Technologies	AWS, Azure
Application/Web Servers	IBM WebSphere, JBOSS, Apache Tomcat
Methodologies	Agile-Scrum, Waterfall, Test Driven.
Editors/IDEs	STS, Eclipse, NetBeans, IntelliJ.

Work Experience:

Client: Change Healthcare, Bridgeton, MO

Aug 2023 – till now

Role: Senior Java Full Stack Developer

- Designed and implemented **Java**-based **microservices** using **Spring Boot**, catering to various functionalities related to partner capabilities such as booking management and financial services.
- Used ORM frameworks like **Hibernate**, **JPA** (Java Persistence API), and **Spring Data JPA** for basic **CRUD** operations (Create, Read, Update, Delete) in a Java backend application.
- Implemented unit tests using **JUnit** and **Mockito** frameworks to validate backend functionality and ensure code quality and reliability.
- Leveraged **Java 17's** performance improvements and security enhancements in application development.
- Was part of the development of an experience API project using **Typescript** with **GraphQL** backend, facilitating flexible data querying and manipulation for frontend applications.
- Utilized agile development methodologies to iteratively deliver features and enhancements, maintaining a fast-paced and adaptive development environment.
- Actively participated in code reviews, testing, and debugging processes to ensure the quality and stability of the applications before deployment.
- Familiarity with design tools such as **Figma**
- Improved the UI using **Angular**, **Angular Material**, **Bootstrap**, **Priming**
- Extensively used **Angular-cli** to generate components, routes, pipes and unit tests.
- Worked on core **AWS services** such as Setting up new server (EC2) instances/services in AWS, configuring security groups, and setting up Elastic IP's, auto-scaling and Cloud Formation.
- Designed and implemented a real-time clickstream analytics pipeline using **Apache Kafka (Confluent Cloud)** to process user website interactions in near real-time. This empowered product and engineering teams to gain insights into user behaviour 10x faster, leading to data-driven improvements in user experience.
- Developed **RESTful APIs** using **Spring Boot** and tested them with **Postman** and **Swagger UI** to ensure seamless communication between different components of the application, promoting efficient data flow and integration.
- Integrated **Kafka** with Spring Boot applications, leveraging Spring Kafka for seamless message production and consumption.
- Managed and optimized cloud infrastructure on **AWS**, including **EC2** instances, **S3** buckets, **RDS** databases, and **VPC** configurations.
- Created Re-useable components, Custom Modules, Custom Directives, Pipes, Services in **Angular**.
- Successfully led the migration and transformation of the existing **Continuous Integration and Continuous Deployment (CI/CD)** process from **Jenkins** to **GitHub Actions**, streamlining and automating the software development lifecycle.
- Managed to drive all **Microservices** builds out to the **Docker** registry and then deployed to **Kubernetes**, Created Pods and managed using **Kubernetes**.
- Successfully led the migration of version control and collaboration workflows from an on-premises **GitHub** instance to **GitHub Cloud**, optimizing team productivity and enhancing collaboration across distributed teams.
- Utilized **Datadog** and **Splunk** data insights to perform performance optimization, capacity planning, and resource allocation based on historical trends and usage patterns. Also Conducted root cause analysis using Datadog and Splunk to identify bottlenecks, optimize application performance, and improve system reliability.
- Used **Gradle** build tool to automate the process of generating **Docker** files, building Docker Images, and pushing them to Docker Registry.
- Used **GIT** for version control and **JIRA** for project and defect management.

Environment: Java 17, JavaScript/TypeScript, AWS, Spring framework, Spring Boot, Micro Services, ORM, REST APIs, GraphQL, Angular 16, HTML 5, CSS3, MongoDB, Postman, Swagger UI, Gradle, Jenkins, GitHub actions, GitHub cloud, Kafka, JIRA, Figma, Docker, Kubernetes, Datadog, Splunk, IntelliJ IDEA.

Client: State of CA, SFO, CA
Role: Java Full Stack Developer

Apr 2021 – July 2023

- Gathering requirement specifications in the sessions involving Business and IT.
- Followed **Agile** Methodology for the Software Development Life Cycle.
- Built serverless Java functions to handle event-driven workloads on **Azure Functions**.
- Analyse the defects, defect fixing and assign it to appropriate resource. Support the team to fix defects.
- Worked on **React JS** Virtual Dom, react views and rendering UI using different custom HTML Tags components.
- Creation of the High Level and Detailed Level design documents for the application.
- Design, Coding, Development of the Gateway application using technologies like **Spring Boot, Hibernate, REST Micro Services, JSON, HBase** etc.
- Actively involved in development of user experience for payments section of the application using **React JS** which is one of the most critical modules of ever enhancing and compatible with modern UI aspects.
- Used **React JS** components for handling Events, Forms across multiple modules involving Keys, Router and flux models to achieve faster responsiveness.
- Managed and orchestrated Java microservices in containerized environments with **Azure Kubernetes Service (AKS)**.
- Designed and developed **REST Micro Services** using **Spring Boot**.
- Tested the **REST APIs** using Postman.
- Upgraded and migrated Java applications from earlier versions to **Java 11**, ensuring compatibility and leveraging new language enhancements.
- Implemented **reactive patterns** and best practices to design responsive, scalable, and resilient applications.
- Fix the production defects during warranty period.
- Used **Redux async** actions to achieve asynchronous functionality for application.
- Build new or modify existing test cases / test harnesses to effectively test the work that was done on system components using **test driven** development.
- Deployed and configured Java applications on **Azure Virtual Machines** with optimized resource scaling.
- Integrated **Kafka** Streams API with Java applications for stream processing and real-time analytics.
- Implemented data access, querying, and CRUD operations using **NoSQL** database APIs and drivers.
- Work with product managers, business stockholders, operations and architecture teams in the very cross-functional environment to meet the product vision and business goals.
- Used the **JavaScript libraries jQuery, AJAX** to talk to the **RESTful API** and display the **JSON** format data for the end user.
- Involved in the creation of exhaustive **JUnit Unit Test** Cases for each java class that is being developed for this application using a mocking **framework Mockito using Test Driven Development** technique.
- Implemented Spring Security for authentication and authorization.
- Created **HBase** tables to load large sets of structured, semi-structured and unstructured data coming from **UNIX, NoSQL** and a variety of portfolios.

Environment: Java 11, Spring Boot, Micro Services, Azure, REST APIs, Kafka, React JS, Redux, Maven, Jenkins, HTML 5, CSS3, Java script, NodeJS, Spring framework, Hibernate.

Client: Central Bank of Chicago, Chicago, IL
Role: Java Backend Developer

Oct 2019 – Mar 2021

- Developed application using **Java** and **Java EE** technologies like **JSP, Servlets, JDBC, Spring, Spring Boot, Hibernate, and JPA** to implement its feature like Lambda Expressions for array operations,

collections. Enhanced concurrency methods etc. throughout the application for well-defined programming.

- Create and configured the continuous delivery pipelines for deploying **Microservices** using **CI/CD Jenkins** server.
- Implemented **Micro Services** based Cloud Architecture on **AWS Platform** and Cloud Foundry
- Developed **Restful webservice** they are to be consumed by other applications.
- Used **Maven** and **Ant** for creating **EAR, WAR** and **JAR** file to be deployed in application servers and integrated with **git, Jenkins**, and **Jenkins** Jobs.
- Implemented **Cassandra** data models and schema designs to optimize performance, scalability, and fault tolerance.
- Implemented **Spring Web MVC**, which included writing Controller classes for handling requests, processing form submissions and performed validations using Commons validator.
- Participated in the migration of legacy messaging systems to **Kafka**, reducing latency and increasing scalability.
- Worked with Container service **Docker** with build port and other utilities to deploy Web Applications.
- Used **GIT** for version control and Rally for project and defect management.
- Involved in batch processing using **Spring Batch framework** to extract data from database and load into corresponding Merchant App tables.
- Optimized **RabbitMQ** performance by tuning prefetch counts, message TTLs, and queue priorities, ensuring efficient resource utilization.
- Used **Jenkins** and pipelines to drive all **Microservices** builds out to the **Docker** registry and then deployed to **Kubernetes**.
- Worked on **AWS, EC2 server** and s3 storage to deploy functional prototypes.
- Deployed and managed containerized applications on **Kubernetes** clusters in production environments.
- Developed a fully automated **continuous integration** system using **Git, Jenkins, MySQL** and custom tools developed in **Python and Bash**.
- Expertise validating the **UNIX** logs using **Putty** and **Super Putty** for different Integration applications.
- Writing Complex **SQL** queries and performed backend testing verify data integrity.
- Involved in fixing defects in the production in existing legacy application
- Involved in various meetings like scrum daily standup meeting, sprint review, sprint retrospective, sprint showcase, weekly grooming sessions with clients and sync up with other stake holders who consume or provide the services, knowledge transfer to production support team etc.

Environment: Agile/Scrum Methodology, Java, AWS, Spring Boot, Spring JPA, EC2, MySQL, RESTful, Kafka, Docker, Junit, Mockito, API Implementation, Swagger API, Kubernetes, Jenkins, Maven, Postman.

Client: eBay, Austin, TX

Jan 2018 - Sep 2019

Role: Java Backend Developer

- Involved in analysis, specification, design, and implementation and testing phases of Software Development Life Involved in the analysis, design, and development and testing phases of Software Development Lifecycle (SDLC).
- Used Struts framework to add a module that would capture progress notes entered the system.
- Implemented Exception mechanism and used Struts error message mechanism.
- Server-side validation was performed using Struts Validation Framework
- Implemented Java and **J2EE** Design patterns like Business Delegate and **Data Transfer Object (DTO), Data Access Object and Service Locator**.
- Used **Spring AOP** for cross cutting concerns and IOC for dependency injection.
- Used join-point, advice, point cuts, and aspects in **Spring AOP**.
- Implemented MVC Architecture to separate the presentation, business and database logic in the application.

- Used **Hibernate**, object/relational-mapping (ORM) solution, technique of mapping data representation from MVC model to Oracle Relational data model with a SQL-based schema.

Environment: Java, Struts, JDBC, JNDI, MS SQL Server, WebLogic, Apache Tomcat, SOAP, JUnit, Apache Ant.

Client: TESCO Hindustan PVT Ltd, India

Aug 2014 – Oct 2017

Role: Core Java Developer

- Performed the analysis, design, and implementation of software applications using Java, J2EE.
- Involved in coding, maintaining, and administering Servlets, and JSP components to be deployed on a **Web Sphere Application server**.
- Worked with core java concepts such as Oops, Multi-threading, collection framework and Exception handling.
- Used various **Core Java** concepts such as Multi-Threading, Exception Handling, Collection APIs to implement various features and enhancements.
- Used **Apache Ant** to compile java classes and package into jar archive. Wrote **PL/SQL** queries, stored procedures, and triggers to perform back-end database operations.
- Developed Action Forms and Controllers in **Struts framework**.
- Developed and implemented spring and **J2EE** based MVC (Model-View-Controller) framework for the application.
- Designed, developed, and maintained the data layer using **Hibernate**.
- JUnit was used to do the Unit testing for the application.
- Involved in tracking and resolving defects, which arise in QA & production.

Environment: Core Java, J2EE, JSTL, JSP, Hibernate, Servlets, PL/SQL, Apache Ant, JUnit
