Agile Project Manager and Certified ScrumMaster® with over more than a decade of IT experience spanning all phases of the Software Development Life Cycle (SDLC) and driving successful project execution across various industries. Expertise in Agile frameworks (Scrum, Kanban) and waterfall models with a strong record of enabling and coaching cross-functional teams to deliver high-quality solutions in a dynamic environment.

- Proven ability in coaching teams through Agile adoption, driving Agile best practices and fostering a culture of iterative development, collaboration, and continuous improvement.
- Strong understanding of Scrum techniques and associated artifacts, including User Stories, Backlog Refinement, Sprint Planning, Definition of Ready, Definition of Done, and Incremental Delivery
- Led and managed software development projects that are time-critical and complex, ensuring high-quality deliverables through Agile planning, backlog management, and stakeholder alignment.
- Hands-on experience in SDLC best practices, including source control management, build processes, coding standards, code reviews, and testing, ensuring teams adhere to high-quality standards.
- Outstanding communication, time management, and organizational skills, effectively engaging with stakeholders, facilitating Agile ceremonies, and ensuring smooth cross-functional collaboration.
- Developed key Agile metrics and dashboards to monitor sprint progress, measure productivity, and optimize project performance through data-driven decision-making.
- Collaborated closely with Product Owners and stakeholders to refine requirements, manage the product backlog, and prioritize work items to align with business goals and maximize value delivery
- Monitored and tracked project scope, time, and cost within sprints, using Agile metrics to ensure timely delivery of high-value project increments.
- Led cross-functional teams, remove roadblocks, and support self-organization to enhance team productivity and project success. Led the end-to-end execution of projects within Agile frameworks, emphasizing iterative planning, continuous delivery, and adaptation to evolving business needs ensuring successful project outcomes. Defined and developed dashboards and key metrics to measure, monitor, and optimize project progress, enabling data-driven decision-making and enhanced project control
- Developed offshore domain capabilities for products of acquired companies and transferred more than 60% of work from the regions to India Technology Centre (ITC)

CERTIFICATIONS:

- Certified Scrum Master (CSM).
- Certified PRINCE2® Practitioner.

TECHNICAL SKILLS:

Platforms	: Ms-Dos, Windows9x, NT, 2000, XP. AWS Cloud, Citrix
Testing Tools	: ALM (QTP, QC, HPSM), Selenium, QA Center
Languages and Web Technologies	: VB 5.0/6.0, HTML, Angular, JavaScript, MapBox, Kafka
Database	: SQL, SQL-Server 2000, MS-Access, MongoDB, ClickHouse
Applications & Tools	: MS Office, MS Project, JIRA, Confluence, WPBN, WIKI

AREAS OF EXPERTISE:

- Business Analysis & User Story Refinement, Backlog Management, Sprint Management
- Agile Metrics, Continuous Improvement & Organizational Change Management
- Product Ownership, Stakeholder Engagement, Agile Methodologies (Scrum & Kanban)
- Program/Project Management in both waterfall and agile models
- Quality Assurance Management, Testing and Defect Tracking
- Scrum Mastry, Facilitation & Coordination, Definition of Ready, Definition of Done
- Appraisal Team Member & Internal Process Auditor

PROFESSIONAL EXPERIENCE:

STATE of OHIO

Nov 2024 – Till date

Senior Project Manager/ Scrum Master

- Manage end-to-end project lifecycle for AWS cloud initiatives, including planning, execution, monitoring, and closure, ensuring that all projects were delivered on time, within scope, and within budget.
- Lead the design and implementation of comprehensive disaster recovery plans to ensure data integrity and business continuity, aligning with organizational risk management strategies.
- Facilitate adoption, implementation and sustainability of agile processes, principles, and practices early in the Agile journey. Prepare detailed financial reports, including cash flow projections and cost-benefit analysis, to provide stakeholders with clear insights into project financial performance and support data-driven decision-making. Host all Scrum Ceremonies: Sprint Planning, Daily Scrum/Standup, Backlog Refinement, Sprint Review, Sprint Retrospectives. Contribute to all Program Ceremonies: PI Planning, Scrum of Scrums, PO Sync, System Demo, Inspect and Adapt. Apply Lean manufacturing principles to streamline operations, reduce waste, and improve production processes, leading to enhanced productivity.
- Engage with stakeholders to gather requirements for AWS-based projects, providing regular updates and managing expectations through clear communication and project documentation.
- Develop detailed project plans for Azure initiatives, including resource planning, task scheduling, and milestone tracking, to drive projects from initiation to completion.
- People Management, Project Management, with excellent oral, written and verbal communication and team working skills. Develop and deliver high quality presentations and demonstrations to the leadership teams.

CSX Technologies

May 2023 – Oct 2024

Senior Project Manager/ Scrum Master

- Promoted cross-team collaboration on dependency management, resulting in smoother project executions and attend Agile Release Train (ART) sync (Scrum of Scrum) to highlight progress at program level and demonstrate systems demos, ensuring alignment with organizational goals.
- Leading team members in technical analysis to translate requirements into software design, document Specifications. Facilitate Agile ceremonies (Sprint Planning, Daily Standups, Sprint Reviews, and Retrospectives) to ensure successful execution of Railroad projects across CSX sites.
- Collaborate with cross-functional teams and stakeholders to define project objectives, gather requirements, and break them into manageable user stories in alignment with Agile principles.
- Develop and maintain SQL scripts for MongoDB and Click House DB to extract and analyze critical project data, supporting data-driven decision making, and verifying application generated reports
- Act as a Scrum Master by removing impediments, ensuring team focus, and fostering a collaborative environment for enhanced team productivity and efficient delivery of project increments.
- Serve as a Business Analyst to bridge the gap between Business Users, Product Owner and the development team, ensuring clear understanding of requirements and maintaining a product backlog.
- Empower teams by coaching and promoting self-organization, continuous improvement, and accountability, thereby enhancing productivity, utilization, and team performance.
- Monitor and track sprint progress through key Agile metrics (burndown charts, velocity, etc.) and provide reports in Excel, PowerPoint at the project and program levels to ensure transparency.
- Conduct regular retrospectives to identify areas for improvement and implement actionable solutions for better team performance and project outcomes.

MICRON Technologies

Oct 2019 – April 2023

Project Manager

- Planned, monitored, controlled, and executed Infrastructure & Operations projects across Micron Global Sites, leveraging both Agile and Waterfall methodologies based on project needs.
- Led end-to-end execution of major infrastructure projects, including:
- ServerIron Replacement with NetScaler for enhanced load balancing and application delivery.
- Remote Desktop Modernization (Citrix XenDesktop) to optimize virtual desktop infrastructure.
- NAS7 Mode to C Mode Migration, ensuring seamless storage transition and improved performance.
- Lifecycle management of HPE Gen8 and Gen9 Servers, overseeing decommissioning and upgrade strategies.

- Citrix Cloud VDI deployment through Azure, enabling secure and scalable virtual desktop solutions.
- Data Center Migration, managing risk mitigation, infrastructure transition, and business continuity.
- Acted as Product Owner for projects executed in Agile methodology, managing the product backlog, defining acceptance criteria, and ensuring high-quality increments.
- Led requirement-gathering sessions with business stakeholders, transforming high-level business needs into detailed user stories and prioritizing features based on business value.
- Facilitated Agile ceremonies (Sprint Planning, Daily Standups, Sprint Reviews, Retrospectives) to ensure successful execution of projects across Micron sites.
- Monitored Agile metrics (velocity, burndown charts) to track team performance, making data-driven decisions to optimize processes and deliverables on a fortnightly basis.
- Managed projects executed in Waterfall methodology by defining project scope, timelines, phase-wise deliverables, and stakeholder expectations, ensuring smooth execution from planning through implementation and post-go-live support. Developed detailed project plans, risk management strategies, and milestone tracking frameworks to ensure successful execution of large-scale infrastructure migrations and upgrades. Managed vendor relations, contract negotiation, project budget and deadlines, and focused on maximum cost savings in tracking project expenditures and services.
- Collaborated with cross-functional teams, IT architects, and vendors to ensure seamless integration, scalability, and operational efficiency across all infrastructure.

NTT Data

Jan 2016 – Nov 2018

Project Manager

- Executed the project in agile methodology through all phases of System Development Life Cycle (SDLC). Responsible for building System Design by communicating with business and technical teams for all project requirements. Directing the product lifecycle management to engineering and non-engineering teams using Scrum framework. Plan, Monitor and Control all offshore projects of various products (Development, Manual Testing and Automation Testing) related to Long Term Care Group. Gathered and analyzed requirements for the Long-Term Care Group, converting them into clear, actionable user stories and managing the backlog for multiple projects. Collaborated with stakeholders and development teams to prioritize product features and define user stories to align with Agile development cycles.
- Developed SQL scripts and executed ETL/data testing to validate data integrity, ensuring accurate and efficient data flows within project deliverables. Managed team productivity for 6 major and 6 minor products, overseeing a cross-functional team of more than 35 members. Led People Management, Team Building, Empowerment initiatives to increase productivity, utilization and billability
- Generated various reports in Excel and PowerPoint formats that are related to Utilization, Productivity, billability, quality, etc., team wise and team member wise

SS & C Technologies

Aug 2008 – Dec 2015

Project Manager

- Facilitate Scrum ceremonies (Sprint Planning, Standups, Sprint Reviews, and Retrospectives) to ensure smooth execution of testing and automation projects. Serve as a servant leader by removing impediments, fostering a collaborative team environment, and ensuring Agile best practices are followed. Work closely with Product Owners and stakeholders to translate business requirements into well-defined User Stories, Acceptance Criteria, and Test Scenarios within the Agile framework. Monitor and track sprint progress using Agile metrics (burndown charts, velocity, defect density), ensuring timely and high-quality deliverables. Define and refine test automation strategies, integrating automated testing into Agile development cycles to enhance speed and accuracy.
- Support the adoption of Agile testing practices, enabling QA teams to align with iterative development and continuous integration workflows. Lead and mentor testing teams, ensuring efficient collaboration across manual and automation testing for multiple healthcare products. Drive continuous process improvements, using feedback loops and retrospectives to enhance test efficiency, automation frameworks, and overall team productivity. Ensure reusability and scalability of test automation frameworks, packaging scripts for broader adoption within the organization and by end customers. Foster a culture of transparency and collaboration, ensuring alignment between QA, development, and business teams to deliver high-quality software solutions.
