

WALE EMIABATA

Data Engineer

Location: Texas | Mobile: +1 917-405-6714 | Email: waleemiabata77@gmail.com

PROFESSIONAL SUMMARY:

Certified **Cloud Data Engineer and Agile Practitioner** with **7+ years** of professional knowledge and experience in **Azure and AWS cloud** infrastructures. Hands-on experience with deployment and management of cloud-based services. Extensive knowledge of **Agile methodologies** for development life cycles; as well as all aspects of change and configuration management. Passionate about creating value for business with the power of data.

Skilled in cloud services like **Azure Data Factory, Azure Databricks, Spark, Azure Data Lake Storage Account, Azure SQL Databases, SQL Data Warehouse, S3, Redshift, Azure Synapse, Glue Jobs, Airflow, Snowflake & Salesforce.**

TECHNICAL EXPERTISE

Cloud Services:	AWS, Azure, Azure Data Factory, Azure Databricks, Azure SQL Database, Functions, Azure Synapse, LogicApps, AppServices, Azure KeyVaults AWS EC2, S3, RDS, CloudFormation, Crawlers, IAM, VPC, AWS Glue, RDS, Redshift Data Warehouse, Snowflake, Salesforce NPSP
CI/CD:	Jenkins,
Ticketing Traffic Tools:	Jira, ServiceNow, Azure DevOps
Databases:	SQL Server 2018, PostgreSQL, Azure SQL
OS:	Windows Server, Cisco, IOS, Linux (Red hat, Ubuntu, Debian)
AWS:	VPC, EC2, S3, RDS, ELB, EBS, Glue Jobs, Airflow DAG
Source/Version Control	Git, GitHub, GitLabs, BitBuckets
Build Tools:	Jenkins
Streaming Data Technologies:	Apache Kafka, Apache Flink

WORK EXPERIENCE

Data Engineer,

Client: Crohn's & Colitis Foundation (Health Care Domain)

Company : CareerUS Solutions

Oct 2022 – Present

- Worked on data migration from **On-Prem SQL Server Database to Azure** using Azure Data Factory, Azure Data Lake and Azure Databricks.
- Design and implement the data driven workflows using azure data factory with various data sources.
- Migrate the huge volume of the data from the On-premises system to the Cloud using the various Strategies and implement the **Slowly Changing dimension Type1/Type2** with other various approaches.
- Design the databricks notebooks using Pyspark for data extraction, transformation and landing the data into the databricks Delta Table
- Participated in **requirement gathering** from new data sources and **prepared mapping documents.**
- Created multiple data integration pipelines in ADF to perform **ETL & ETL workloads.**
- Dumping data into Azure Data Lake Storage and analyzing raw data using Azure Data Lake Analytics jobs.
- Created Azure Databricks notebooks in PySpark for transforming raw json data into structured data.
- Worked with business teams and technical analysts to understand business requirements.

- Extensively worked on building and publishing **Power BI datasets, reports, and dashboards**
- **Led scrum meetings** and performed other Agile ceremonies like effort estimation and user stories management using JIRA.
- Collaborate with cross-functional teams to resolve dependencies and meet sprint deadlines.

Data Engineer

Client: Blue Cross Blue Shield (Healthcare Domain)

Company: CareerUS Solutions

Mar 2020 – June 2022

- Spearheaded the design and execution of Extract, Transform, and Load (ETL) solutions utilizing SSIS, ensuring seamless data integration and transformation.
- Conducted comprehensive data modeling exercises for new implementations, including meticulous analysis of datasets, schema design, entity definition, and establishment of table relationships.
- Orchestrated AWS Step Functions to streamline the processing of lambda functions within new data pipelines, facilitating the ingestion of diverse data sources (Flat files, JSON, CSV & Databases) into target databases Redshift & RDS (SQL Server, MYSQL).
- Engineered sophisticated ETL data pipelines using Azure Data Factory, resulting in a notable 25% enhancement in data processing efficiency.
- Implemented rigorous data quality checks and validation procedures, yielding a commendable 15% reduction in data errors and a marked improvement in data reliability, thus elevating the quality of healthcare analytics.
- I employed PySpark in Azure Databricks for large-scale data extraction, transformation, and loading, showcasing expertise in processing. Furthermore, I created PySpark notebooks to convert raw JSON data into structured formats, improving data usability and analysis. Additionally, I leveraged Azure Databricks for real-time data processing, seamlessly integrating streaming data from various sources and reducing data latency by 40%.
- Maintained and administered Azure SQL Databases proficiently, instituting automated data backup protocols that fortified data security and resilience, resulting in zero data loss incidents over the past year.
- Leveraged version control tools such as Git and GitHub to meticulously track and manage code changes, ensuring seamless collaboration and robust code versioning practices.
- Implemented cutting-edge real-time data processing and streaming technologies, exemplified by the adept utilization of Azure Databricks, to empower timely insights and facilitate informed decision-making in healthcare analytics.
- Designed and implemented robust automated data backup and recovery strategies leveraging cloud-native solutions, thereby safeguarding data integrity and ensuring resilience against potential disruptions

Database Developer,

Company: EPSILON

Sep 2017 – Feb 2020

- Identify data sources, create **data flow diagrams** and document **sources to target mapping** and process along with any **business transformation** needed.
- Design, Implement and maintain database objects (**tables, views, stored procedures, indexes, etc**) and database security.
- Maintain data warehouse performance by **optimizing batch processing** through parallelization, **performance tuning by monitoring query execution plans** and taking appropriate actions.
- Troubleshoot performance and reliability issues and investigate anomalous behavior in the Database environment.
- Analyze and report performance of database operations against the key database performance metrics.
- Work on **production support** tickets and resolve production issues without service interruption.

- Responsible for maintaining the **data archival process, incremental and daily backups, audit logs and backup and restoration of databases.**
- Working with TA on database modeling and design to understand the **entities, attributes and relationships** in a given dataset.
- Run SQL DDL/DML scripts to set up database objects in **Azure SQL Database.**
- Set up **access control and user permissions** on Azure SQL database.

EDUCATION

Master's in business administration Obafemi Awolowo University
B. Tech Computer Engineering- Landmark Metropolitan University

2017
2008

CERTIFICATIONS

DP-203 - Data Engineering on Microsoft Azure
AWS Certified Solutions Architect
DP-900- Microsoft Azure Data Fundamentals
AZ-900 - Microsoft Azure Fundamentals

STRENGTHS

- Ability to do self-learning and upskilling.
- Can work as an individual contributor as well as a team player.
- Excellent communication skills both verbal and written.
- Effective planning and organizing skills.
- Results, output, and detail oriented individual and a quick learner.
- Have the ability to analyze complex issues and arrive at solutions.
- Good at leading and working in a team.
- Committed, result oriented and interested to learn new technologies.
