Salesforce	SharePoint	Power Automate	EDMS
GlobalSearch	Generative AI	Jitterbit ETL	Stakeholder Communication
Process Improvement	Adaptability	Graphic Design	Technical Writer
Business Analysis	Requirements Gathering	Workflow Design	Data Migration

EXPERIENCE

Amscan Inc./PCHI | Woodcliff Lake, NJ

Project Manager (2010-2024)

Simultaneously worked on multiple projects sometimes requiring learning new applications or software. Each new request or task was completed using Agile and traditional project management methodologies, which included gathering requirements, risk analysis, scheduling, budgeting, reporting, stakeholder management, user acceptance testing and deployment. Position Closed in December 2024 due to company closure.

- **Corporate Sales Automation Project** - *Custom Solution - traditional methodology*
 - Gathered and documented business requirements from executives, sales reps, and stakeholders; translated them into functional specifications and process maps for a \$100M+ annual sales remote order system
 - Managed vendor selection, hardware selection, budgeting, and ERP (AS400) integration, including design of UI prototypes, development of sync pipelines, facilitation of requirements validation and UAT
 - Served as post-launch administrator and support lead, creating user documentation, resolving issues, and ensuring long-term adoption
- **Sales Leads** - *SharePoint List powered by Power Automate - Agile and traditional methodologies*
 - Analyzed existing CRM workflows and identified gaps, replacing Salesforce CRM with SharePoint and Power Automate and built automated routing rules
 - This Solution resulted in a 10% increase in new customer acquisitions by ensuring timely automated delivery and notifications to sales reps through the new SharePoint workflow
 - Designed workflow logic in Power Automate to ensure timely lead assignment and notifications, reducing manual steps by 20%.
- **Quality Control Issue Capture** - *Aras Innovator PLM system - Agile Scrum methodology*
 - Collaborated with stakeholders and developers in Agile sprints to build Aras Innovator forms that captured quality control issues during warehouse inspections
 - Developed automated workflows and notifications in Aras Innovator; designed a resolution matrix to calculate cost-effective chargeback outcomes
 - Achieved a 16% revenue gain by increasing accuracy and frequency of vendor chargebacks through enhanced quality control tracking and resolution logic
- **Product Safety Lab Test Reports** - *Aras Innovator - Agile Scrum methodology*
 - Conducted business process analysis to design automation intercepting lab emails, parsing metadata, and linking reports to product records
 - Led development team as Scrum Master to deliver lab report automation tools, ensuring on-time delivery and full alignment with stakeholder requirements

- **PLM System - Aras Innovator - Agile Scrum methodology**
 - Participated in evaluation, selection, and deployment of Aras Innovator as the replacement PLM system, ensuring alignment with business requirements for product lifecycle management.
 - Developed and executed a data migration strategy, including data mapping, cleansing, and import of legacy system data.
 - Partnered with stakeholders to elicit and prioritize requirements; served as Scrum Master for enhancement sprints, coordinating developer tasks and ensuring timely delivery from the product backlog.

SharePoint Developer (2023-2024)

- Designed and maintained SharePoint lists and custom apps to support business workflows and user productivity
- Created automated SharePoint List to capture daily CSV data feeds from a third-party B2B site using Power Automate for daily data refresh
- Developed AskHR Power App integrated with Outlook to capture entire email threads and generate support tickets for HR, including lifecycle tracking and reporting features

Salesforce Administrator/Developer (2015-2022)

- Managed Salesforce Sales Cloud for Wholesale division, including admin, development, and support roles
- Integrated Salesforce with AS400 via Jitterbit ETL importing order/invoice data
- Partnered with stakeholders to define reporting requirements, enabling more dynamic sales insights
- Conducted gap analysis between existing Salesforce functionality and business reporting needs

Business Analyst (2010-2024)

- Gathered, documented, and validated business requirements for multiple enterprise systems
- Conducted process mapping and workflow design to streamline operations
- Led UAT sessions to ensure solutions aligned with business needs
- Created data migration plans, including mapping, cleansing, and validation
- Facilitated stakeholder interviews and workshops to align priorities and deliverables

Document Management Administrator/Developer (2010-2024)

- Led administration, development, and training for enterprise-wide EDMS (GlobalSearch, InfoRouter), supporting company-wide and international document workflows.
- Conducted workflow analysis and gathered requirements to design an EDMS environment managing 1.5M+ searchable documents with automated routing, metadata parsing, and notifications.
- Developed scan scripts for batch and single document processing, reducing scan time by 50%, and integrated documents from multiple sources including AS400, PLM, and email.

CERTIFICATES

- Certified Associate in Project Management (CAPM)
- Project Management Professional (PMP) - *In Progress*
