

WILLIAM JONES – SENIOR GOLANG ENGINEER

Kerrville, Texas • williamjones94710@gmail.com • (818) 293-5042

Highly motivated and results-oriented Golang developer with 10 years of experience in designing, developing, and implementing robust and scalable software solutions. Proven ability to lead teams, contribute to open-source projects, and deliver high-quality code in diverse industries. Expertise in web development, data science and cloud technologies.

Professional Experience

Senior Golang Engineer

Walmart

May 2021–Present

- Designed scalable microservices using Golang and Go-kit, optimizing system performance and improving throughput.
- Implemented RESTful APIs and gRPC services, enabling seamless communication between services.
- Developed internal diagnostic tools using Golang and Angular, improving system debugging efficiency.
- Built an RFC-based service for handling large-scale data ingestion from PostgreSQL, improving data processing speed.
- Successfully migrated legacy C-based architecture to Golang, reducing maintenance complexity and increasing system stability.
- Created PDF report generation services for 3M+ users using Golang, XML and PostgreSQL, automating user notifications.
- Developed Golang-based feedback and limit monitoring systems, enhancing risk management in financial applications.
- Integrated Spring Circuit Breaker Pattern and Hystrix Dashboard, improving microservices resilience and observability.
- Built a distributed resource management system in Erlang, increasing automation efficiency in test execution.
- Implemented chat-bots with Golang API, improving customer support automation and operational efficiency.

Senior Golang Engineer

Accenture

Apr 2017– May 2021

- Developed Go APIs using the Revel framework with Ginkgo-driven TDD.
- Built backend modules in Python/Django and implemented RESTful APIs.
- Worked with Node.js, MongoDB, Elasticsearch, and PostgreSQL for backend services and reporting applications.
- Implemented JWT-based authentication and access control systems.
- Troubleshoot issues on AWS, working with Spring Cloud Netflix Eureka, Go-Hystrix Circuit Breaker, and Apigee for microservices orchestration.
- Architected infrastructure on Google Cloud Platform (GCP), leveraging various cloud services.
- Implemented Docker-based CI/CD pipelines using Jenkins & Maven for automated builds and deployments.
- Designed RDBMS solutions using SQL, PL/SQL, MySQL, and Oracle.
- Utilized AWS DynamoDB for NoSQL storage and dumped JSON data efficiently.
- Managed AWS infrastructure, including EC2, S3 buckets, and IAM access control.
- Developed JUnit test cases for REST services and worked with SOAP & RESTful APIs.
- Automated testing with Jasmine and Selenium.
- Followed Agile/Scrum methodologies for project and team management.
- Executed manual test cases and reported issues using JIRA.
- Wrote scripts in Python, Golang, Perl, and Linux Shell to optimize workflows.
- Implemented Erlang-based backend solutions using CouchDB and BackboneJS for frontend - integration.
- Installed and configured development environments on Windows NT and Linux.

Web Developer

Zest AI

Mar 2014– Apr 2017

- Involved in requirement analysis, design, coding, and unit testing for multiple applications.

- Developed and implemented Single Sign-On (SSO) solutions using SAML to integrate with WellBeing (LV) applications.
- Created JKS certificates to enable secure interactions with third-party applications for SSO implementation.
- Golang backend development for microservices architecture using JSON, Docker, and MongoDB.
- Built RESTful web services for seamless communication between clients and servers.
- Designed and developed database structures using MySQL and PL/SQL Server, including SQL queries and stored procedures.
- Implemented SAML response generation for third-party authentication and external system integration from ADE applications.
- Developed services to support various business entities and validated them through REST APIs.

Skills

Golang (Go-kit, gRPC, Revel), Python, JavaScript, AWS, GCP, Docker & Kubernetes, Terraform, Apigee API Gateway, RESTful APIs & gRPC, Circuit Breaker Patterns (Hystrix, Spring Cloud Netflix Eureka), OAuth 2.0, JWT, SAML, Single Sign-On (SSO), Event-Driven Architecture (Kafka, RabbitMQ, AWS SNS/SQS), Jenkins, GitHub Actions, Maven, Ginkgo, Gomega, JUnit, Jasmine, Selenium, Agile/Scrum Methodologies

Allied American University, Santa Cruz, CA

May 2014

Bachelor's Degree of Computer Science
