EDUCATION

West Virginia University Institute of Technology (WVU Tech) – Beckley, WV

Aug 2022 - May 2026

B.S., Computer Science & Computer Engineering

- **GPA:** 3.5 / 4.0
- **Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Software Development

TECHNICAL SKILLS

- **Programming Languages:** Java, Kotlin, Bash, C#, MySQL, PostgreSQL, TypeScript, JavaScript, Golang, HTML, CSS
- **Frameworks&libraries:** Spring Boot, Spring Security, Vaadin, Angular, Bootstrap, JavaFX, Swing, Playwright, Selenium, Junit, Cucumber, Mockito
- **Tools:** Git, Docker, SupaBase, Kafka, MongoDB, Postman, N8N, MySQL Workbench, DBeaver, PGAdmin4, MongoDB Compass, MongoDB Atlas, Maven, Gradle, Redis

PROJECTS

Research Notes Manager – AI-powered hybrid desktop & web application

- Streamlined research workflows with secure user/project management, AI-assisted note-taking, and automated data extraction from arXiv and PubMed.
- Implemented JWT-based authentication, rich text editing, AI-generated summaries/roadmaps via OpenRouter API, and web automation for citation/content validation.
- Designed with a MySQL backend and modular architecture, enabling scalable research management and intelligent knowledge organization.

School Management Backend System

- Built a full-featured backend system for managing schools, students, teachers, and classes with role-based access control and scalable database design.
- Implemented CRUD operations for student/class/teacher management with Spring Data JPA & Hibernate.
- Designed RESTful APIs with validation, error handling, and layered architecture.
- Integrated MySQL for persistent data storage and Lombok for boilerplate reduction.

EXPERIENCE

Full-Stack Developer — Scholarty

- Completely overhauled and optimized the backend system and database, improving stability, scalability, and overall performance
- Migrated the platform from Supabase to a fully self-hosted backend infrastructure, enabling greater control over deployment, security, and cost management.
- Redesigned and optimized the database schema, improved query performance, and implemented secure authentication and role-based access control.
- Built and deployed new features for both Android and iOS applications, ensuring consistent functionality and user experience across platforms.
- Integrated real-time communication and notifications, enhancing user engagement and app responsiveness.
- Configured production servers, deployment pipelines, and monitoring systems, ensuring high availability and smooth operation of the platform.
- Collaborated closely with the team to prioritize feature development, fix critical bugs, and deliver a reliable, scalable full-stack solution.
