Work Experience

Trigo
Full Stack Developer

Windsor, CA
July 2024-December 2024

- Worked with the **UX/UI** team to design and develop **25+** reusable **UI components** for both **Angular** and **React** applications, improving performance for **3.6M+** active users.
- Designed and updated website to seasonal themes and increased traffic and customer engagement by **40%**.
- Wrote clean, efficient, and maintainable code while following the **Agile** development lifecycle.
- Implemented unit tests using **React Testing Library** achieving **99%** bug fix.
- Collaborated with a team of **5** developers to create a scalable, user-friendly **prototype**, which was presented to over **10** stakeholders for approval.

Fly Prediction Technology
Full Stack Developer

London, UK (Remote)
Jan 2022- June2024

- Designed and implemented the **Full stack** architecture of a sports prediction platform leveraging **Java** and **Spring Boot** for the backend and **React.js** with **HTML/CSS** for the frontend which now supports over **50,000** users.
- Developed and deployed **5+ Microservices** to manage user notifications, match alerts, and personalized prediction recommendations, handling over **50,000** daily active users and generating over 1 million notifications per week.
- Automated testing pipelines with **JUnit** and **Mockito**, leading to a **40%** reduction in manual testing time and enabling faster release cycles with **continuous integration (CI)** processes.
- Developed **10+ RESTful APIs** that provided real-time sports predictions, statistics and analytics for over **6** different sports with an average response time of under **200ms** and **99%** uptime, ensuring high availability and low latency during peak usage time.
- Implemented **CI/CD** pipelines using **AWS Code Pipeline**, **code Build**, and **Code Deploy**, automating the build, testing, and deployment process for over **20+ Microservices** across development and production environment.

Education

University of Waterloo || Career Accelerator Program:
Back-End Frameworks and Architecture
Custom Pathways in secure coding

2025

Monaco Institute of Business and Computer Science
Bachelor of Software Engineering || GPA 3.7

2019-2022

Projects

Banking Management System

- Developed a banking management application using **Java** and **Spring Boot** providing core functionalities for user account management, transaction handling and secure communication.
- Developed **10+ RESTful APIs** to handle key banking functions, including user registration, login, balance checks and fund transfers, facilitating smooth interactions between the back-end and front-end systems.

Skills

Programming Languages: Python, SQL, Java, JavaScript, React Native, Node.js, Angular, Html, CSS.

Frameworks: Django, Flask, Spring Boot.

Tools: Jenkins, GitLab CI/CD, Docker, Kubernetes, Figma.

Cloud Platforms: AWS (EC2, S3, Lambda).

Databases: MySQL, PostgreSQL, MongoDB.

Soft Skills: Documentation, Problem solving, Excellent Communication, Data Structure and algorithms, System Design, Architecture, Testing, Integrations, Object-oriented Programming, Generative AI.
