

CHARAN KUMAR

Austin, TX | charankamasani83@gmail.com | +1 (913) 303-8760

Professional Summary

Full Stack Developer with 4+ years of experience designing, developing, and scaling secure, resilient, and high-performance enterprise applications. Expertise in Java, Spring Boot, Angular, REST APIs, AWS, and Salesforce, with strong exposure to microservices, data pipelines, reinforcement learning-based workflows, and real-time troubleshooting. Proven track record in building scalable agentic systems, observability pipelines, and distributed architectures across finance and e-commerce domains. Adept at translating research prototypes into production-grade systems and optimizing performance, scalability, and reliability.

Technical Skills

Languages: Java, Apex, JavaScript, TypeScript, Python, HTML5, CSS3
Frameworks: Spring Boot, Angular 12+, Node.js, Lightning Web Components (LWC)
Backend/Integration: REST APIs, GraphQL, MuleSoft, OAuth2, JWT, Microservices
Cloud/Infra: AWS (EC2, EKS, S3, RDS, Lambda), Salesforce Platform, Docker, Kubernetes
Databases: MongoDB, PostgreSQL, MySQL, NoSQL
DevOps/Tools: Jenkins, Git, Bitbucket, GitHub Actions, Terraform, SFDX
Testing: JUnit, Postman, Jest, PyTest, Apex Test Classes
Agile: Jira, Confluence, Scrum, CI/CD Pipelines

Professional Experience

Full Stack Developer, Apple Inc. – Austin, TX Aug 2024 – Present

- Designed and developed microservices for agent orchestration and state management using Spring Boot and AWS ECS, supporting over 10K daily concurrent requests.
- Built data registry APIs for real-time agent state tracking and metadata caching, reducing data retrieval latency by 35%.
- Integrated LLM-based recommendation engine APIs with ad management systems, improving advertiser experience accuracy by 28%.
- Implemented evaluation pipelines for offline/online testing of reasoning quality and system guardrails using Jenkins and JUnit, cutting error rates by 40%.
- Automated reinforcement learning data ingestion pipelines using AWS Lambda + S3, streamlining model retraining cycles by 25%.
- Built monitoring and observability dashboards using CloudWatch and ELK stack, reducing MTTR by 45%.
- Introduced circuit breakers and fallback strategies for distributed services, improving availability to 99.97% uptime.
- Collaborated with applied scientists to deploy and fine-tune agentic models, bridging LLM research to production-grade APIs.
- Designed a multi-tenant caching mechanism that reduced API load by 30% during advertiser queries.
- Participated in architecture reviews, enforcing scalable design standards across multi-region deployments and ensuring audit compliance.

Full Stack Engineer, JP Morgan Chase – India May 2021 – Dec 2023

- Developed high-performance REST APIs and microservices in Spring Boot to integrate advertiser transaction data and ML-based analytics, increasing throughput by 50%.
- Designed distributed message queuing (Kafka) for event-driven data pipelines, cutting synchronization delays from 15s to 2s.
- Implemented tool invocation frameworks for internal systems, enabling orchestration across 20+ legacy services.
- Built Angular dashboards visualizing AI-driven insights, improving operational efficiency for ad managers by

40%.

- Resolved API timeout and load balancing issues via async queues and circuit breaking, improving reliability from 88% to 99.9%.
- Designed MongoDB aggregation pipelines for reporting performance, reducing query time by 90%.
- Automated CI/CD deployments using Jenkins and Docker, reducing manual intervention by 60%.
- Led root cause analysis on critical service failures, implementing real-time alerts and auto-remediation scripts.
- Built sandbox testing pipelines for model experimentation, improving model-to-production conversion rates by 35%.
- Collaborated with data scientists to deploy retraining and evaluation pipelines, aligning engineering with advertiser insights and compliance.

Project Highlights

Agent Orchestration Platform

Apple

- Built scalable orchestration engine with microservices and AWS Lambdas for multi-agent communication, reducing inference latency by 30%.

Ad Optimization Data Hub

JP Morgan

- Developed real-time analytics layer integrating advertiser data and ML scoring pipelines, cutting processing time from hours to minutes.

LLM Evaluation and Reinforcement Pipeline

Apple

- Implemented evaluation harness for reasoning quality metrics and RL fine-tuning workflows, improving ad guidance accuracy by 25%.

Education

Master of Science in Computer Science, University of Central Missouri, Missouri

CGPA: 3.8 / 4.0

Bachelor of Technology in Computer Science, Madanapalle Institute of Technology & Science (MITS)

CGPA: 9.0 / 10

Certifications

- AWS Certified Developer – Associate
- Java SE 11 Developer (Oracle Certified Professional)
- Docker & Kubernetes Fundamentals – Coursera
- Agile Scrum Master – Coursera
