

Monisha S

Data Engineer

Phone: [+1 940-503-1296](tel:+19405031296) | Email: monishareddy469@gmail.com | [Linkedin](#)

PROFESSIONAL SUMMARY

Data Engineer with 5+ years of experience designing and optimizing scalable data pipelines, ETL workflows, and cloud-based data platforms. Skilled in Python, SQL, Snowflake, AWS, Databricks, Kafka, and modern data warehousing. Adept at collaborating with cross-functional teams to ensure data accessibility, quality, and usability for analytics, machine learning, and reporting needs.

TECHNICAL SKILLS

Languages: Python, SQL, Bash, Java

Databases/Warehouses: Snowflake, Redshift, BigQuery, PostgreSQL, Oracle, SQL Server

Big Data: Spark (PySpark), Hadoop, Kafka, Delta Lake

ETL & Data Tools: Airflow, Glue, dbt, SSIS

Cloud: AWS (S3, Glue, Lambda, EMR), Azure Databricks

Version Control & CI/CD: Git, Jenkins

Visualization: Tableau, Power BI

Other: Apache Atlas, Docker

PROFESSIONAL EXPERIENCE

Data Engineer — Prudent Technologies, Dallas, TX

Sep 2023 – Present

- Built and maintained scalable data pipelines processing 1.5B+ daily events, enabling near-real-time telemetry for content lifecycle and cross-regional performance monitoring.
- Improved storage and analytical performance by optimizing warehouse schemas in Snowflake & Big Query, delivering 47% faster dashboard responsiveness.
- Migrated pipelines from on-prem Hadoop to AWS S3 + Glue, decreasing ETL failures by 30% and infrastructure costs by 22%.

- Created a modular PySpark validation framework detecting 18K+ schema mismatches monthly, reinforcing downstream data reliability.
 - Enhanced real-time ingestion using Kafka + Delta Lake, adding time-travel capabilities and reducing incident-reprocessing cycles by 35%.
 - Partnered with analytics/product teams to deliver 25+ curated reusable data assets powering experimentation, recommendation logic, and retention models.
 - Automated data cataloging and lineage tracking via Apache Atlas, saving 40+ engineer hours/month and strengthening audit readiness.
-

Data Engineer — Citi bank, India

Aug 2021 – Apr 2023

- Ingested and processed 2+ TB of weekly operational data from retail branches across three states using Python-based data wrangling.
 - Automated 20+ ETL workflows via Apache Airflow & Python, eliminating manual Excel processes and reducing workload from 6+ hrs to <2 hrs daily.
 - Unified SQL Server, Kafka, and S3 data into Redshift, enabling real-time sales forecasting and stock tracking for regional business teams.
 - Improved schema design & indexing in Redshift/PostgreSQL, reducing query times by 40% during peak usage.
 - Developed data validation scripts achieving 93% accuracy, minimizing reporting discrepancies across sales & warehouse data.
 - Delivered curated data supporting 15+ Tableau dashboards for supply chain issue detection and warehouse utilization.
 - Implemented IAM policies, encrypted S3 data, and controlled permissions, accelerating audit approvals by 30%.
-

Junior Data Engineer — Oracle, Bengaluru, Karnataka, India

Dec 2020 – Jun 2021

- Contributed to pipeline development supporting payroll processing of 1.5M+ employee records/month with <0.01% mismatch rate.

- Helped integrate SQL Server data into Oracle warehouses, reducing data prep time by 22%.
 - Built & scheduled 10+ ETL jobs using Python + Shell to automate HRIS file ingestion, decreasing manual work by 40%.
 - Partnered with QA & compliance to identify data inconsistencies, reducing audit discrepancies by 18%.
 - Standardized & validated time-series datasets for 50+ clients, ensuring payroll delivery with zero SLA violations across 8 quarters.
 - Supported archival/retention automation, lowering storage expenses by 15%.
 - Built monitoring dashboards via Excel + SQL, reducing pipeline incident response from 45 min → <20 min.
-

Data Science Intern — Wipro, Bengaluru, Karnataka, India

Jul 2020 – Nov 2020

- Conducted exploratory analysis using Python (Pandas, Matplotlib, Seaborn) to identify patterns influencing business recommendations.
 - Cleaned and normalized datasets to improve machine learning model readiness and accuracy.
 - Designed Tableau dashboards that helped non-technical teams interpret insights and take informed decisions.
 - Used NLP techniques (sentiment analysis + text classification) to generate customer insights that informed product improvements.
-

PROJECTS

Streaming Analytics Platform (Kafka + Spark + S3 + Snowflake)

Built a streaming pipeline to capture and transform clickstream data, storing enriched datasets in Snowflake to support real-time dashboards.

Data Quality Framework (Python + Py Spark + Airflow)

Developed a scalable validation system for schema checks, null detection, statistical distribution variance, and audit logging.

EDUCATION

Masters in Computer and Information Sciences

University Of North Texas – Denton, Texas, USA

Bachelor's in Computer Science

Kallam Haranadha Reddy Institute Of Technology - Guntur, Andhra Pradesh, India

STRENGTHS

- Strong SQL + Python fundamentals
- Cloud & big-data pipeline expertise
- Data modeling & warehousing (Star/Snowflake)
- Business + stakeholder collaboration
- Data quality & governance awareness
