

Summary

As a Senior Software Engineer with over 15 years of experience, I specialize in building scalable, high-performance systems with a strong focus on **Node.js**, **Express.js**, **Java** for backend development and **React**, **Angular** for the frontend. My expertise spans cloud infrastructure, microservices, and event-driven architectures, enabling efficient and resilient system design.

I have a proven track record of collaborating with cross-functional teams, including product management, engineering, and AI teams, to drive feature development while maintaining best practices in testing, security, and CI/CD pipelines. My contributions have enhanced system efficiency, workflow automation, and data optimization across industries such as media streaming and regulatory compliance.

Passionate about exploring new technologies, I thrive in fast-paced, iterative development environments, consistently delivering impactful solutions that align with business objectives.

Experience

Pluto TV, Remote

Senior Software Engineer

2021/01 – 2025/01

As a Senior Software Engineer at Pluto TV, my main responsibilities include developing the user interface of Pluto TV's web and mobile applications.

Pluto TV is a free streaming television service offering a range of on-demand movies, TV shows, and live channels to its users.

- Engineered and optimized high-performance features for web and mobile platforms using **Next.js/React**, ensuring seamless cross-platform performance.
- Implemented **multi-tenant architecture** to support various platform needs, ensuring scalability and efficient resource management.
- Built and optimized backend services using **Node.js**, integrating third-party APIs and enhancing data handling for large-scale content delivery.
- Leveraged **AWS** cloud infrastructure, including **AWS Lambda** and **S3**, to scale applications efficiently and reduce operational costs.
- Designed and consumed **RESTful APIs**, ensuring seamless communication between frontend and backend and optimized for performance.
- Applied event-driven architectures and **Kafka** for real-time data processing, improving system scalability and fault tolerance.
- Enhanced accessibility with **aria-accessibility** and **TTS** (text-to-speak) functionalities to provide an inclusive user experience.
- Collaborated cross-functionally with AI and product teams to improve features and contribute to fast-paced, iterative product development.

Meta (formerly Facebook), Remote

Senior Software Engineer

2017/02 – 2020/12

At Meta, I focused on building and optimizing internal applications using the **MERN stack** to enhance internal workflows.

My role involved creating scalable, high-performance tools with real-time data synchronization, using **GraphQL** for efficient querying and **Java** for backend services integration.

- Led the development of internal tools using the **MERN stack**, optimizing processes across multiple departments and improving team productivity.
- Designed and implemented **GraphQL** APIs to enable **real-time data fetching** and reduce overhead on the backend, improving application performance.
- Integrated **Java** into backend services to ensure compatibility with legacy systems and improve system scalability and reliability.
- Developed modular and reusable **React** components to ensure consistency and maintainability of internal applications across teams.
- Collaborated with cross-functional teams to refine **UI/UX** designs, ensuring user-friendly experiences for internal stakeholders.
- Implemented security best practices and data privacy measures, including **RBAC** (role-based access control) and encrypted communication, in alignment with Meta's internal policies.
- Enhanced **CI/CD** pipelines and optimized test coverage to ensure smooth and efficient deployment of updates across multiple environments.

Airbnb, Colorado

Senior Software Engineer

2013/02 – 2016/12

At Airbnb, I worked on building scalable and flexible systems to support regulatory compliance across multiple global markets.

My contributions spanned building microservices, integrating APIs, and developing tools to facilitate collaboration between internal teams and government partners.

- Developed microservices and APIs using **Node.js** and **React** to drive platform integrations across web and mobile applications, ensuring seamless data synchronization.
- Designed and implemented highly scalable systems to adapt to evolving regulatory requirements, aligning with Airbnb's compliance and enforcement mechanisms.
- Integrated **GraphQL** for efficient querying and real-time data updates, ensuring performance and responsiveness across the platform.
- Led efforts to build cross-functional tools and internal applications, streamlining the collaboration between guest, host, and government-facing systems.
- Applied distributed systems design principles and **cloud-native** architectures to support **petabyte-scale storage** and high availability, ensuring 24x7 reliability.
- Worked closely with cross-functional teams to define roadmaps, participate in design docs reviews, and provide architectural solutions for long-term scalability.
- Contributed to the **City Portal** project, enabling global government relationships with efficient data handling and compliance tracking.
- Led technical sessions and working groups to drive the **technology strategy** for scaling compliance tools and establishing standards for future integrations.
- Emphasized best practices in **CI/CD**, test automation, and security, ensuring rapid and safe deployment of new features and updates.
- Participated in **design pattern** discussions and architectural decision-making, ensuring a balance between performance, maintainability, and scalability.

Universal Studio, Colorado

Software Engineer

2009/08 – 2013/01

At Universal Studios, I contributed to the development and maintenance of backend systems using **Java**, ensuring smooth integration and high system performance for various entertainment services.

- Developed **Java**-based backend services supporting ticketing and event management systems.
- Integrated third-party APIs using **Java**, enabling seamless data exchange across systems.
- Worked with **MySQL** to design optimized data models, ensuring scalability and performance.
- Utilized **Spring Framework** to build scalable web applications and improve service modularity.
- Wrote **unit tests** and **integration tests** with **JUnit** to maintain system reliability and prevent regressions.

Education

University of Florida, Bachelor of Computer Science, 2005 - 2009

- GPA: 3.87 / 4.0

Skills

- **Programming Languages:** Java, JavaScript (React, Node.js), TypeScript, Python
- **Frontend Development:** React, Next.js, Vue.js, GraphQL, RESTful APIs, HTML/CSS
- **Backend Technologies:** Node.js, Spring Framework, Python Flask, Django, GraphQL
- **Databases:** MongoDB, MySQL, PostgreSQL, Elasticsearch
- **Cloud/DevOps:** AWS (Lambda, S3), Docker, Kubernetes, CI/CD (Jenkins, GitLab CI)
- **Testing & Automation:** Jest, Mocha, JUnit, Cypress, Selenium
- **Version Control:** Git, GitHub, GitLab
- **Agile Methodologies:** Scrum, Kanban, Sprint Planning, Jira, Confluence
- **Monitoring & Security:** New Relic, Datadog, Prometheus, OAuth 2.0, JWT, TLS, SSL
- **Collaboration & Communication:** Slack, Microsoft Teams, Zoom, Notion
- **Performance & Accessibility:** WCAG, ARIA, Lighthouse, Web Vitals
