PROFESSIONAL SUMMARY: Senior QA Automation Engineer with **10 years of experience** in Software Testing, Quality Assurance, and **Automation Testing** across Web, Desktop, and Mobile applications. Proficient in both **manual and automated testing**, covering the complete **software testing lifecycle**—including requirements analysis, test planning, script development, execution, defect reporting, and maintenance. Adept at working in **Agile environments** (Scrum, Kanban, and Waterfall), ensuring high test coverage through structured automation strategies. **Expertise in designing scalable automation frameworks, integrating with CI/CD pipelines, and optimizing software quality using modern testing tools and methodologies.**

Key Expertise Includes

Automation Framework Development: Expertise in designing, implementing, and maintaining **Selenium WebDriver, Appium Studio, BDD SpecFlow, TestNG, NUnit, MSTest, and Coded UI**-based automation frameworks.

Functional & Regression Testing: Experience in testing **web applications, mobile apps (Android & iOS), and backend services** in telecom, retail, healthcare, and banking domains.

API Testing & Automation: Skilled in **REST and SOAP API automation** using **Postman, Rest Assured, RestSharp, and SoapUI**, ensuring seamless service integrations.

Programming Proficiency: Strong coding expertise in **Python, JavaScript, Java, SQL, PL/SQL, C, and C++**, developing scalable and maintainable test scripts for automation.

Database Testing & Validation: Experience in database validation using **Azure Database, Oracle, MongoDB, PostgreSQL, BigQuery, SQLite, Cassandra, and MS SQL Server** to ensure data integrity.

Performance & Load Testing: Hands-on experience in **JMeter and LoadRunner** for performance benchmarking, system reliability testing, and stress/load testing.

CI/CD Pipeline Automation: Integrated automated testing into **CI/CD pipelines** using **Jenkins, Azure DevOps, GitHub, and Bamboo**, ensuring efficient build validation and deployment.

Mobile & Cross-Browser Testing: Expertise in **mobile automation** using **Appium Studio** and **cross-browser testing** using **Selenium Grid, Firebug, and Chrome Debug Console**.

Defect Tracking & Test Management: Extensive experience with **JIRA, HP ALM, Quality Center, and Visual Studio** for structured defect tracking and test execution management.

Agile & DevOps Methodologies: Experienced in **Agile Scrum, Kanban, and Waterfall** methodologies for structured test planning and execution.

Security & Compliance Testing: Conducted **security testing, vulnerability assessments, and compliance checks** to ensure software adheres to **telecom and healthcare security regulations**.

Scripting & Build Automation: Developed **automation scripts using VBScript, Java, and Shell scripting** and utilized **Maven and Ant** for build automation and dependency management.

TECHNICAL SKILLS:

Testing Tools	Selenium, RestSharp, BDD SpecFlow, Postman, NUnit, MSTest, Coded UI, Appium Studio, TestNG, Rest Assured, Cypress, Playwright, Jmeter
Programming Languages:	Python, JavaScript, Java, SQL, HTML, C, C++, PL/SQL, TypeScript.
CI/CD & DevOps Tools	Jenkins, Azure DevOps, GitHub Actions, Docker, Kubernetes
Webservices	Soap UI, GraphQL and Postman
Scripting Languages	VB Script, Java, Shell.
Build Tools	Maven, Ant.
Bug Tracking Tools	Quality Center, HP ALM, JIRA, Visual Studio
Database	Azure Database, Oracle, MongoDB, PostgreSQL, BigQuery, SQLite, Cassandra, MS SQL Server, AWS Lambda, Google Cloud Platform.
Version Control Tools	SVN, GIT.
Web Debugging Tools	Firebug, Chrome debug console.
Operating System	Linux, Windows, Mac, iOS, Android
Methodologies	Agile Scrum, Kanban, and Waterfall.

PROFESSIONAL WORK EXPERIENCE:

Client: T-Mobile, Plano, TX
Role: Sr.QA Automation Engineer

Oct2023–Present

Developing and maintaining scalable, high-performance test automation frameworks for web, API, and mobile applications in a telecom environment. Implementing CI/CD pipelines, end-to-end test automation strategies, and Agile testing methodologies to improve software quality and accelerate deployments.

Key Contributions:

- Designed and implemented **Selenium WebDriver, BDD SpecFlow, and TestNG-based automation frameworks**, ensuring modularity and reusability.
- Automated **REST and SOAP API testing** using **Postman, Rest Assured, and SoapUI**, validating API responses and security protocols.
- Developed **end-to-end test cases** covering provisioning, billing, and customer self-service workflows.

- Integrated **automated test suites** with **Jenkins, GitHub, and Azure DevOps** for continuous testing in **CI/CD pipelines**.
- Conducted **mobile automation testing** using **Appium Studio** for **iOS and Android applications**.
- Performed **cross-browser testing** using **Selenium Grid and Chrome Debug Console**, validating web applications across multiple browsers.
- Developed **performance and load tests** using **JMeter and LoadRunner**, analyzing system behavior under peak conditions.
- Conducted **database testing** using **SQL Server, MongoDB, and Azure Database**, ensuring stored procedures, triggers, and data integrity.
- Configured **automated test reporting** using **Jenkins** for real-time test tracking and defect monitoring.
- Established **test data management strategies**, utilizing synthetic data generation for automation coverage.
- **Followed Agile Scrum and Kanban methodologies** to ensure efficient test planning, execution, and defect resolution cycles.
- Conducted **security testing**, identifying vulnerabilities and ensuring compliance with **telecom security regulations**.
- **Developed shell scripts** to automate test data generation and cleanup in a **Linux** environment.
- Used **Maven and Ant** for **build automation and dependency management**.
- **Version control and collaboration** handled using **SVN and Git**.
- Performed mobile automation testing using Appium for Android and iOS applications.
- Conducted functional and UI testing across different devices and screen sizes.
- Managed test cases and execution using JIRA/Xray for Agile projects.
- Used TestRail for test case documentation and reporting.
- Designed and enhanced automation frameworks using Selenium, TestNG, and BDD SpecFlow.
- Built reusable test components to optimize automation execution.
- Worked with **GraphQL** testing in addition to REST and SOAP API testing using Postman and Rest Assured.

Responsibilities:

- Develop and maintain **Selenium, BDD SpecFlow, and TestNG-based automation frameworks**.
- Implement **API automation scripts**, verifying request/response structures, authentication mechanisms, and performance metrics.
- Integrate **test suites** into **CI/CD pipelines** using **Jenkins and Azure DevOps**.
- Conduct **security testing** to ensure compliance with **telecom security standards and industry regulations**.
- Perform **regression, functional, and integration testing** across multiple sprints.
- Maintain **comprehensive test documentation and defect tracking** using **JIRA and HP ALM**.
- Work in **Agile Scrum and Kanban environments**, collaborating with cross-functional teams for efficient sprint planning and execution.

Environment:

Selenium WebDriver, BDD SpecFlow, TestNG, Postman, Rest Assured, SoapUI, JMeter, LoadRunner, Jenkins, Azure DevOps, GitHub, SQL Server, MongoDB, Azure Database, Firebug, Chrome Debug Console, JIRA, HP ALM, Linux, Windows, Mac, iOS, Android, Agile Scrum, Kanban.

Client: Grocery Outlet, Emeryville, CA

August 2021–Oct 2023

Role: Sr. QA Automation Engineer

Led the automation testing strategy for Grocery Outlet's digital transformation, ensuring software quality, reliability, and performance across eCommerce, inventory management, and POS applications. Developed and executed automated and manual testing strategies for web, mobile, and backend systems, integrating structured testing methodologies into CI/CD pipelines for enhanced test efficiency.

Key Contributions:

- Designed and implemented **Selenium WebDriver, NUnit, and Coded UI-based automation frameworks** for web and mobile testing.
- Developed and executed **API automation scripts** using **Postman, Rest Assured, and SoapUI**, ensuring seamless backend service integration.
- Conducted **mobile automation testing** for **Android and iOS applications** using **Appium and TestNG**, validating app performance across multiple devices.
- Performed **load and performance testing** using **JMeter and LoadRunner**, optimizing system performance under high user load.
- Automated **end-to-end testing workflows** using **Jenkins and GitHub Actions**, integrating with **CI/CD pipelines** for continuous validation.
- Led **cross-browser testing efforts** using **Selenium Grid and Firebug**, ensuring web compatibility across major browsers.
- Conducted **database testing** using **SQL Server, Oracle, PostgreSQL, and MongoDB**, verifying data consistency and integrity.
- Established **QA best practices**, including **test case management in JIRA and defect tracking in Quality Center**.
- Implemented **security testing protocols**, ensuring compliance with **data protection standards**.
- Optimized **test execution strategies**, reducing regression testing time by **40%** through automation enhancements.
- **Worked in Agile Scrum, Kanban, and Waterfall methodologies** to align testing processes with project requirements.
- Used **PL/SQL and PostgreSQL** for backend database validations, ensuring smooth transactional data consistency.
- Integrated **Azure Database and Cassandra** for NoSQL-based test validations and analytics.
- Developed **VBScript and Shell scripts** for automating test data creation and execution in a **Linux** environment.
- Used **Maven and Ant** for **build automation** and dependency management.
- **Version control and collaboration** handled using **SVN and Git**.
- Executed automation test scripts on AWS cloud environments.
- Integrated Selenium-based test suites with AWS Lambda for scalable execution.
- Managed test cases and execution using JIRA/Xray for Agile projects.
- Used TestRail for test case documentation and reporting.

Responsibilities:

- Developed and maintained **Selenium WebDriver, NUnit, and Coded UI-based automation frameworks** for web and mobile applications.
- Designed and executed **functional, regression, and API test cases**, ensuring seamless integration across backend services.
- Integrated **automated test suites** with **Azure DevOps and Jenkins**, ensuring reliable execution within **CI/CD pipelines**.
- Performed **database testing**, validating stored procedures, triggers, and data migrations in **relational and NoSQL databases**.

- Provided **detailed defect reports** and collaborated with development teams for issue resolution using **Quality Center and JIRA**.
- Led **performance benchmarking initiatives**, ensuring system stability and responsiveness.
- Maintained **test automation scripts**, continuously improving **framework scalability and efficiency**.
- Followed **Agile Scrum, Kanban, and Waterfall methodologies** to align testing approaches with project requirements.
- Worked with **Google Cloud Platform (GCP)** for managing database services and cloud-based analytics, utilizing BigQuery

Environment:

Selenium WebDriver, NUnit, Coded UI, Postman, Rest Assured, SoapUI, JMeter, LoadRunner, Azure DevOps, Jenkins, GitHub, SQL Server, Oracle, PostgreSQL, MongoDB, Azure Database, Cassandra, PL/SQL, VBScript, Shell Scripting, Firebug, Chrome Debug Console, JIRA, Quality Center, Linux, Windows, Mac, iOS, Android, Agile Scrum, Kanban, Waterfall.

Client: UPMC, Pittsburgh, Pennsylvania
Role: Sr.QA Automation Engineer

Sep 2019 – August 2021

Developed and executed test automation strategies for UPMC's healthcare applications, ensuring compliance, security, and high system reliability. Led the implementation of automation frameworks, API testing, and database validation, streamlining testing processes within Agile methodologies.

Key Contributions:

- Designed and developed **Selenium WebDriver, BDD SpecFlow, and NUnit-based automation frameworks** for UPMC's web and mobile healthcare applications.
- Automated **API testing** using **Postman, Rest Assured, and SoapUI**, ensuring seamless integration between **electronic medical records (EMR), patient portals, and third-party services**.
- Conducted **database validation testing** with **SQL Server, Oracle, PostgreSQL, and Azure Database**, ensuring **accurate data retrieval and integrity** across healthcare systems.
- Developed and executed **test cases for patient management workflows**, including **appointment scheduling, billing, and insurance claims processing**.
- Implemented **performance testing** using **JMeter and LoadRunner**, simulating high **patient traffic loads** to validate system **scalability and efficiency**.
- Integrated **automated testing** into **CI/CD pipelines** using **Jenkins, Azure DevOps, and Git**, ensuring **continuous quality checks**.
- Conducted **mobile application testing** using **Appium Studio and TestNG**, validating **compliance with healthcare accessibility and usability standards**.
- Managed **security testing**, verifying **encryption, authentication, and access control measures** aligned with **HIPAA regulations**.
- Led **UAT sessions**, collaborating with **medical professionals** to validate **real-world workflows before production deployment**.
- Maintained **test documentation, defect reports, and execution logs** in **JIRA and HP ALM** for effective **tracking and reporting**.
- Followed **Agile Scrum and Kanban methodologies**, ensuring an **iterative and collaborative approach to testing**.
- Developed **PL/SQL queries and database scripts** to support **ETL testing and backend validation**.
- Used **Maven and Ant** for **build automation and dependency management**.

- Conducted **cross-browser testing** using **Selenium Grid** and **Firebug**, validating **web applications** across **multiple platforms**.
- Wrote **shell scripts** for **automating test execution** and **log management** in **Linux environments**.
- Used **JMeter** to conduct load and performance testing for web applications.
- Worked on basic security testing using **OWASP ZAP** to identify vulnerabilities.

Responsibilities:

- Developed and maintained **Selenium WebDriver**, **BDD SpecFlow**, and **NUnit-based automation frameworks** for **web and mobile applications**.
- Designed and executed **functional**, **regression**, and **API test cases**, ensuring **seamless integration** across **backend services**.
- Integrated **automated test suites** with **Azure DevOps**, **Jenkins**, and **Git**, ensuring **reliable execution** within **CI/CD pipelines**.
- Conducted **database testing**, validating **stored procedures**, **triggers**, and **data migrations** in **SQL Server**, **Oracle**, and **Azure Database**.
- Provided **detailed defect reports** and collaborated with **development teams** for **issue resolution** using **JIRA** and **HP ALM**.
- Led **performance benchmarking initiatives**, ensuring **system stability** and **responsiveness** under **high user load**.
- Implemented **security best practices**, ensuring **compliance with HIPAA** and other **data privacy regulations** in **healthcare systems**.
- Optimized **test execution strategies**, reducing **manual effort** through **automation enhancements**.
- Worked in **Agile Scrum** and **Kanban environments**, participating in **daily stand-ups**, **sprint planning**, and **retrospectives**.

Environment:

Selenium WebDriver, BDD SpecFlow, NUnit, Postman, Rest Assured, SoapUI, JMeter, LoadRunner, SQL Server, Oracle, PostgreSQL, Azure Database, Jenkins, Azure DevOps, Git, HP ALM, JIRA, Firebug, Selenium Grid, PL/SQL, Shell Scripting, Maven, Ant, Linux, Windows, Mac, iOS, Android, Agile Scrum, Kanban.

Client: Lowe's, Charlotte, NC

May 2017 – August 2019

Role: Software Engineer

Developed and maintained enterprise-grade software solutions for Lowe's retail systems, focusing on backend development, system integrations, and cloud-based services to optimize inventory management, order processing, and transaction security. Designed and deployed scalable, high-performance applications to improve operational efficiency and customer experience.

Key Contributions:

- Designed and developed microservices-based architectures for Lowe's retail systems, ensuring high availability and performance.
- Implemented RESTful APIs using Java and Spring Boot, facilitating seamless integration between inventory, eCommerce, and POS systems.
- Developed and optimized SQL Server and Oracle database schemas, ensuring efficient data retrieval and transactional consistency.
- Deployed containerized applications using Docker and Kubernetes within Azure and AWS cloud environments.
- Enhanced payment processing systems, integrating third-party payment gateways for secure transactions and fraud prevention.

- Conducted code reviews and performance optimizations, ensuring adherence to security and coding best practices.
- Developed CI/CD pipelines for continuous integration, testing, and deployment.
- Provided technical mentorship and knowledge-sharing to ensure best practices in software development and cloud deployment.
- Integrated test automation into CI/CD pipelines using Jenkins.
- Worked with Docker containers to run tests in isolated environments.

Responsibilities:

- Designed and maintained scalable backend solutions for inventory management, order processing, and customer transactions.
- Developed and deployed highly available, fault-tolerant microservices using Java and Spring Boot.
- Integrated SQL databases, ensuring optimized data storage and retrieval.
- Developed secure API integrations for payment systems, supplier networks, and logistics services.
- Automated infrastructure deployment and monitoring using Jenkins and Kubernetes.
- Ensured compliance with security standards and conducted vulnerability assessments.

Environment: Java, Spring Boot, RESTful APIs, SQL Server, Oracle, Docker, Kubernetes, Azure, AWS, Jenkins, GitHub, CI/CD.

Client: NTT DATA, Noida, Uttar Pradesh, India

Jun2014–Dec2015

Role: Software Engineer

Designed and implemented scalable software solutions for banking applications, ensuring high performance, security, and reliability. Focused on backend development, API integrations, and database management to enhance system efficiency and financial transaction processing.

Key Contributions:

- Developed and optimized **RESTful APIs** using **Java and Python**, ensuring smooth communication between banking services.
- Designed **SQL and NoSQL database schemas** using **Oracle, Cassandra, MS SQL Server, and PostgreSQL** to support transactional integrity.
- Implemented **batch processing** for high-volume financial transactions, ensuring efficient data handling and compliance with financial regulations.
- Integrated **secure API connections** for banking services, enhancing **fraud detection and prevention capabilities**.
- Deployed and managed **containerized applications** using **Docker**, ensuring scalability and deployment efficiency.
- Developed **web-based analytics tools** using **JavaScript, HTML, and CSS** for real-time financial data visualization.
- Conducted **performance optimizations** to ensure system responsiveness under high transaction loads.
- Automated **backend service testing** using **Postman and Rest Assured**, verifying API performance, authentication, and data handling.
- Developed **CI/CD pipelines** using **Jenkins and Git**, automating testing, deployment, and monitoring processes.
- Conducted **security audits** and **vulnerability assessments**, ensuring compliance with **financial security regulations**.

Responsibilities:

- Designed and maintained **backend services** for banking applications, ensuring robustness and scalability.
- Developed **microservices and APIs** to support seamless integration with third-party financial services.
- Created and optimized **database queries** to support financial reporting and real-time analytics.
- Ensured compliance with **financial security regulations** through encryption and authentication mechanisms.
- Deployed **containerized banking services** using **Docker**, enhancing operational efficiency.
- Conducted **performance benchmarking** to ensure system stability and responsiveness under high transaction loads.
- Maintained test scripts for **database validations** using **PL/SQL**, ensuring accurate data migrations and transactions.

Environment:

Java, Python, JavaScript, HTML, CSS, Oracle, MS SQL Server, PostgreSQL, Cassandra, Docker, RESTful APIs, Postman, Rest Assured, Selenium WebDriver, JMeter, Jenkins, Git, Linux, Windows.

EDUCATION

- M.S in Information Technology and Management at University of Houston, 2017
- B.E in Mechanical Engineering at SRM IST, 2014
