

Lokesh Pashya

ETL & Data Warehouse Developer

Phone: +1 (989) 944 9245 | Email: lokeshreddy0660@gmail.com

PROFESSIONAL SUMMARY

- **A SENIOR ETL AND DATA WAREHOUSE DEVELOPER** with experience in Product Development method and deeply involved in data analysis, process flow, design, development and administration of information management systems.
- Over 9+ years of professional experience in Data Warehousing using DataStage, Ab Initio, Informatica, IBM Information Server and SSIS in Linux and Unix environments using Oracle, Teradata, UDB/DB2 and SQL Server databases for medium to large enterprise data warehouses (typically size of 10-12 terabytes) and data marts to centralize immense volumes of data for analytics.
- Hands-on experience of major components in Hortonworks Hadoop ecosystems like Hadoop Map Reduce, HDFS and HIVE.
- Expertise on migration applications from on-prem to azure cloud and understanding of GCP cloud data warehouses and ML algorithms.
- Over the years, I worked on producing and implementing powerful Enterprise Information Solutions and Enterprise Data Warehouse strategies with a principal focus on Data Governance, Business Intelligence, Analytics and Data Warehousing.
- The area of expertise encompasses Database designing, ETL phases of Data Warehousing. This is achieved with an emphasis on relational data modeling and dimensional data modeling for OLTP and OLAP systems.
- Strong working experience architecting highly scalable, distributed systems as well as designing, optimizing Data Warehouse and Data mart applications, leading, and guiding the ETLs through the construction, testing and implementation view.
- Worked extensively with Dimensional modeling, Data migration, Data cleansing, ETL Processes for data warehouses.
- Experienced in writing JCL, COBOL programs on Mainframe environment and working with PeopleSoft, SAP BW, SAP R/3 - ERP Systems.
- Very strong skills and clear understanding of requisites and solutions to various issues in implementation throughout the Software Development life cycle (SDLC).
- Excellent knowledge on various tools like R and Tableau utilizing slicing and dicing methods, analyzing cubes with MDX queries and creating various graphs as part of data visualization, creating various dashboards, Interactive dashboards using Tableau and SSRS for decision making
- Excellent knowledge of Data Governance- Transparency, Accountability and Standardization
- Demonstrate a solid understanding of data quality concepts and manage data quality utilizing profiling concepts
- Experience with snowflake cloud technologies and migrating databases to snowflake
- Excellent knowledge on building real time data pipelines using Apache Kafka
- Practical experience in Quality Assurance – designing and execution of test cases, test scripts and test procedures.
- Excellent communication and interpersonal skills and strong ability to perform as part of a team and individually.
- Demonstrated ability in grasping new concepts (Both Technical & Business) and utilized as needed.

EDUCATION

- **Bachelor of Computer Science**, Jawaharlal Institute of Technology Hyderabad, India

Leadership & Extracurricular Activities:

- President, Literary & Service Clubs – Organized community service initiatives and literary events, enhancing student engagement and leadership development.
- Active Member, National Service Scheme (NSS) – Led multiple social welfare programs, including blood donation drives and rural education campaigns, fostering community impact.

TECHNICAL SKILLS

ETL tools	IBM DataStage, Ab Initio, Informatica, IBM Information Server, SSIS.
Data Modeling	Star-Schema Modeling, Snowflake Modeling, Relationship Modeling.
Data Warehouse	Teradata, Oracle, MS SQL Server, UDB/DB2, Snowflake.
Programming language	C, C++, VB, UNIX Shell Scripting, SQL, SQL*Plus, PL/SQL, R.
Reporting/visual	SSRS, R, Tableau, Business objects (SAP BI).
Operating Systems	Windows, Unix, Linux, and Mac.
Databases	Oracle, MySQL, SQL-Server Postgres, MongoDB.
ERP Packages	SAP FS-RI 6.5, PeopleSoft EPM 8.42.
Version Control	GIT, Bitbucket.
Cloud services	AWS, EC2, S3, VPC, AWS Lambda, Cloud Watch.
Cloud Technologies	Snowflake, Snow SQL, Azure, GCP.
Methodologies	Agile methodology, Scrum.
Build Tools	Ant, Maven, Gradle, Docker, Jenkins.

PROFESSIONAL WORK EXPERIENCE

Client: Wells Fargo,
Sr Ab Initio Developer

Jan 2023-Present

- Documented the source to target mappings for the existing ETL DataStage jobs and Ab Initio graphs for cloud migration.
- Worked on Re-Host project, converting the existing ETL into Azure transformation projects and implement ETL and data movement solutions using Azure Data Factory (ADF) and Databricks utilizing PySpark.
- Developed various data pipelines using Azure Data Factory to load data into Snowflake Data Warehouse.
- Developed spark applications using spark-SQL in Databricks for data extraction, transformation and aggregation from multiple source systems and loaded data into Snowflake data warehouse.
- Involved in comparison and validation of on-prem production data and migrated cloud data utilizing ad-hoc SQL and worked with the migration team to fix any issues.
- Involved in analyzing the existing ETL code and guided the migration team for the implementation of the solution to make sure there are no data differences.
- As part of Agile approach, I worked closely with Product owner to understand every requirement.
- Created detailed design documents to clearly explain the present state vs future state, the model to deliver during the 2-week sprints.
- Actively participated in backlog refinement session to refine the user stories and to ensure they are in Definition of Ready (DOR) state.
- Partnered with Scrum master and delivery team members to participate in sprint planning to set Sprint Goals and for a successful sprint outcome.
- Always worked consistently to keep agile team velocity chart in an incremental fashion by overcoming any number of impediments/dependences with DBA, source/target teams.

Environment: Ab Initio GDE 4.0.2.3 Co-op 4.0.2.12, IBM Information Server 9.5, Teradata 14, Hadoop, Hive Snowflake Data warehouse, Azure Data Factory V2, Azure Databricks, Python, Spark SQL.

Client: Name – Target Minneapolis, MN
Analytics Consultant

March 2020- Jan 2023

- Develop and maintain the business requirement prototype and validate the P & L impacts before submitting the business requirement documents.
- Coordinate and implement projects between the trade desk, upper management, and IT teams.
- Lead a team of Business Enablement team to optimize solutions to create ETL process loading the data into data lakes and encrypting and protecting the confidential data.
- Design and develop a process to create a consolidated history for the QRM Archive data. This process included T-SQL scripts and windows scripting to perform data cleansing and data mining of current data against history to eliminate duplicates and override key fields with derivations for fallout analysis and reporting. The new consolidated history table allows for simplification of overly **complex SQL processes** that combined quarterly result sets going back QRM **data warehouse** for ten years.
- Support the effort to Transition PWAV's SQL Server based QRMFEED business requirement prototype into **Teradata SQL**. Guide other PWAV analysts to use results from this prototype to validate the IT team's implementation of these requirements.
- Implement a reporting layer using ETL SSIS, SQL scripts and automate the process for loading the data as part of the daily batch process.
- Worked on creating various views from multiple tables, nested queries to simplify and automate the daily reports.
- Extensively used BIDS SSIS ETL to extract, transform and Load data from various sources
- Created DTS packages for transforming data from various data sources.
- Extensively used SQL Profiler tasks establish the quality data from new sources.
- Extensively used SSIS transformations such as script task, lookup components, if-then conditions for the validity of dates to perform specific tasks and data flow tasks
- Created SSIS packages to generate detailed logs into SSIS log tables, error handling and used check points for re-running failed SSIS jobs.
- Extensive knowledge of JSON source connectors, Rest API task and XML source connectors.
- Used On Post Execute and On Error event handlers to insert and update each task logging in SSIS log table.
- Automate the daily batch SSIS packages based on the trigger events to create a reporting layer for the business consumption.
- Created and maintained Package configuration file for each environment with database connection details, file paths and global/local variables information.
- Create various views using the reporting layer with **SSRS and Excel** including the **pivot tables** to generate the reports for Trade Desk's critical ALGO and VAR initiatives.
- Assist in the design and implementation of Excel Front End-based reporting requests to support the trade desk.
- Convert various applications based on VBA, Access and Excel applications to a VB.NET/VBA application that leveraged the existing QRM SQL Server database.

Environment: QRM, BIDS (SSIS/SSRS), SQL Server Integration Service (SSIS), SSIS Power Pack, SQL Server 2008, SQL Profiler, Teradata 13, Windows Scripting, VBA, VB.Net, Office 2010, Windows XP/Vista.

Client: Name – JP Morgan Chase, Wilmington, DE

Jan 2018- Feb 2020

Applications System Engineer

Roles & Responsibilities:

- Worked closely with the BSC's (business system consultants) and business users to create detailed technical specification documents.
- Worked extensively with the **UNIX scripts** for loading the various mainframe files and loading the target tables using the Teradata MLOAD utility in EIW DataMart/data warehouse by applying transformation rules and implemented re-start functionality in the scripts.
- Worked on the re-host project, converting the target database from DB2 to Teradata 13 and the conversion was carried out by using the **IBM Information Server 9.1, 8.x, DataStage 7.5** and **Unix shell scripts (k-shell)**.
- Extensively worked with the various Teradata utilities like **Teradata BTEQ, Multiload, Fast load** for importing and exporting data from the tables.
- Created an automated compare process to compare the tables in different environments on a field-by-field basis and reported the summary of the differences to the business by using the shell scripts, **C++** program and **Teradata utilities**.
- Worked closely with the cross-functional teams for validation and analysis of the upstream files received as well as the downstream files delivered from the EIW
- Worked with the data modeler and DBA teams for creating and modifying the tables and primary and secondary indexes for improving the overall system performance.
- Various dashboards and ad hoc reports generated to understand the key metrics and loan origination trends.
- Used the **UCM ClearCase** extensively to keep track of the different versions of the objects and check out and check in the code for each release.
- Worked extensively with the **Autosys** commands and created new and modified existing JIL's and used as a scheduling tool for automation.
- Performed **Unit testing and Integration testing** by writing various ad-hoc SQL queries.
- **CDTS** is used as defect tracking and works closely with the testing team/ business users to resolve the issues, and the tickets are updated with detailed resolution.
- Lead 3-4 team members in the implementation of the large projects and deliver the projects in a timely manner.
- Performed production support and on-call rotation for the above project.

Environment: IBM Information server 9.1,8.x, DataStage EE 7.5.2, DB2, Ab Initio, Teradata 13, Toad2.5, Shell Scripting (K-shell), C++, AIX-UX, CDTS, Autosys, Windows XP/Vista.

Client: Name – Value labs, Hyderabad, India

June 2015- Nov 2017

Data Warehouse Developer

Roles & Responsibilities:

- Involved in documentation of **business, functional requirements, detailed technical design specifications, test plans, execution of test plans and implementation plans**.
- Extensively worked with **Production issues and performance tuning** (typically reduced **job run times from 4hrs to 1 hr**) of server jobs as well as parallel jobs.
- For this purpose, modified the existing jobs and developed the new jobs wherever necessary.
- The jobs are diagnosed to find out whether the jobs are **CPU limited, or I/O limited** by collecting the performance statistics and corresponding steps are taken to improve the performance.
- Used **IPC, Link Collector stages** extensively to improve performance of server jobs.
- Tuned the Hashed files using **ANALYZE.FILE** and enabled 64-bit if the size of the hashed file goes over 2GB.
- Created multiple compilation jobs to run the job in multiple instances at the same time
- Modified the existing **routines, DataStage wrappers**.
- For passing the parameters to the jobs, user defined variables are used in **DataStage Administration** for project level.

- PeopleSoft Application Designer is used for creating the new tables and fields based on the source and target fit/gap.
- Used **PeopleSoft Application Designer** for creating the new tables metadata and to move the metadata scripts from different environments.
- Used **DataStage Manager** for importing metadata from repository, new job categories and creating new data elements.
- Worked with **PS Query** to create CRDW reports to validate daily loads and validate ABM activities, resources, and export to excel files to send the functional team to validate the data.
- Tuned of SQL queries for better performance for processing business logic in the database
- Creating test plans and test scenarios for the functionality and performance testing
- DataStage jobs are scheduled and run using **People Tools**.

Environment: Ascential DataStage EE 7.5.1 (Designer, Manager, Director, Administration), Informatica, DB28.2, WinSQL4.1, Toad2.5, PeopleSoft EPM 8.42, Shell Scripting (K-shell), HP-UX.
