SUMMARY

Senior Data Engineer with 7+ years of experience in designing and optimizing data architectures, cloud platforms (AWS, GCP, Azure), and real-time data pipelines. Expertise in Data Engineering, Big Data, PySpark, Kafka, SQL, and BI tools, focusing on scalable systems, data quality, and cost optimization. Skilled in building and managing end-to-end ETL processes using DBT and GitHub for complex business challenges.

WORK EXPERIENCE

Truist Bank, Dallas, TX - Sr. Data Engineer

Jun 2024 - Present

- Designed and deployed **high-performance, scalable data pipelines on Google Cloud Platform (GCP)** using **DataProc, Dataflow, and BigQuery**, improving real-time data processing by 50% and reducing latency for Data Engineering projects.
- Developed robust **end-to-end ETL workflows in Apache Airflow and PySpark**, automating data ingestion, transformation, and validation for terabyte-scale datasets, increasing operational efficiency by 40% and utilizing GitHub for version control.
- Optimized **PySpark jobs** by 40% through efficient memory management, parallel processing, and advanced partitioning techniques, significantly reducing query execution time and cost overhead in Data Engineering tasks.
- Implemented **CI/CD pipelines with Jenkins, Git, and Terraform**, automating deployments and cutting failures by 30%.
- Migrated legacy **Hive-based data pipelines to Google BigQuery**, cutting query execution time by 30%, improving scalability, and enhancing data accessibility for analysts and engineers.

Charter Communications, O'Fallon, MO - Sr. Data Engineer

Mar 2023 - May 2024

- Led the migration of **financial data pipelines and workflows** from on-premises SQL databases to **AWS and Snowflake**, reducing infrastructure costs by 25% and improving query performance using DBT for data transformations.
- Developed and scheduled complex **Apache Airflow DAGs** for workflow automation, orchestration, and monitoring, improving data pipeline efficiency and reducing execution failures in Data Engineering projects.
- Integrated **Kafka-based real-time data streaming solutions** for fraud detection, customer analytics, and low-latency event processing, enabling seamless cross-system communication and utilizing GitHub for code management.
- Automated **cloud infrastructure** provisioning and deployment with **Terraform, Kubernetes, and Azure DevOps**, reducing deployment time by 40% and ensuring scalability for large-scale applications.

Fortis Healthcare, CA - Sr. Data Engineer

Jun 2020 - Dec 2022

- Engineered high-performance **ETL pipelines** using **Apache Nifi, Flume, and Sqoop**, automating data ingestion, transformation, and integration across multiple sources, reducing processing time by 40% in Data Engineering projects.
- Implemented **columnar storage formats (Parquet, ORC, Avro)** to enhance query performance, optimize compression, reduce cloud storage costs, and improve scalability by 30%, utilizing DBT for data modeling.
- Developed **real-time Kafka Streams and Apache STORM applications**, enabling low-latency data ingestion, transformation, and processing for critical healthcare data transactions.
- Integrated **machine learning models with Spark MLlib**, leveraging predictive analytics to forecast insurance claims, optimize fraud detection, and improve risk assessment accuracy.

Lincoln Financial Group - Data Engineer

Feb 2018 - May 2020

- Developed enterprise-grade **ETL pipelines using SQL Server Integration Services (SSIS)** to consolidate insurance claims, financial transactions, and healthcare records, improving data accuracy by 50%.
- Designed and implemented scalable **data pipelines with Apache Kafka and Spark Streaming**, automating real-time data processing for operational and customer-facing analytics.
- Automated data validation with **Python scripts**, ensuring integrity and boosting operational efficiency by 30%.
- Streamlined **CI/CD workflows** by **integrating AWS Lambda, AWS CodePipeline, and Jenkins**, ensuring seamless deployment and reducing time-to-market for updates.
- Defined **data quality standards & implemented monitoring systems** to ensure reliable data pipelines across teams.

Mutex Soft Solutions, Hyderabad, India – Data Analyst

Aug 2017 - Jan 2018

- Developed and maintained an interactive website by integrating **frontend (HTML, JavaScript, CSS) and backend (Python, MySQL)** technologies, enhancing functionality and user experience.
- Designed and implemented **real-time data ingestion pipelines using PySpark**, enabling seamless processing of unstructured data for web applications and enhancing scalability and efficiency.
- Created **dynamic data models** and property list generation scripts in Python, automating data extraction and reducing manual data entry by 50%, improving data accuracy.
- Streamlined **data workflows by parsing XML with Python** and storing in MySQL. Optimized performance, cutting load time by 20%, and enhanced SEO, increasing traffic by 40%.

EDUCATION

University of North Texas - Master's, Advanced Data Analytics

SKILLS

Programming Languages	: Java, Python, R, Scala, Shell Scripting
Big Data Technologies	: Hadoop, Apache Spark, HDFS, Map Reduce, PIG, Hive, Sqoop, Oozie, Flume, HBase, YARN, Cassandra, Phoenix
Frameworks	: Hibernate, Spring, Cloudera CDHs, Hortonworks HDPs.
Databases	: Oracle, PostgreSQL, DB2, SQL Server, MongoDB, MySQL, Azure Cosmos DB, Snowflake, Redshift
Cloud Services	: AWS (EMR, Glue, Redshift, S3, EC2, IAM), GCP (BigQuery, Dataproc, Cloud SQL, Dataflow, Pub/Sub), Azure (Data Lakes, Data Factory, Databricks, SQL Data Warehouse).
Development Tools	: IntelliJ IDEA, Eclipse, PyCharm, GIT
Relevant Skills	: Apache Airflow, Data Engineering, PySpark, ETL, GitHub
