DOB - 05/March/2000

PROFESSIONAL SUMMARY

Results-oriented and innovative Software Developer with extensive experience in developing web and mobile applications using modern technologies such as **React.js**, **Python**, **Redux**, **php** and **Elasticsearch**. Proven ability to solve complex problems and deliver high-quality, scalable solutions. Strong communicator with experience working in agile environments, passionate about continuous learning and improving system performance.

SKILLS SUMMARY

- **Languages:** Python, PHP, JavaScript, SQL
- **Front-End:** React.js, Redux, HTML
- **Back-End:** Node.js, Django, Python
- **Databases:** MySQL, MongoDB, Elasticsearch
- **Tools/Frameworks:** Kibana, Git, WebSockets, Cake, Pandas, apache
- **Others:** RESTful APIs, Agile Methodologies, Cloud Integration (AWS, Azure)

WORK EXPERIENCE

Full Stack Developer | Formerly Nopaperforms Pvt Ltd (Meritto)

27/Feb/2024 - Present

- Developed Echo, a messaging platform similar to WhatsApp Business, using React.js for the front-end and Node.js and Python for the back-end and websocket for real time messages .
- Integrated Kaleyra and Karix APIs for messaging, and push notifications to enhance communication features (for notification use firebase).
- Utilized MongoDB and MySQL databases for efficient real-time messaging data handling and optimized performance for scalability.
- Developed real-time reporting system for voice broadcasting using Elasticsearch for fast indexing and querying of broadcast data.
- Integrated MongoDB to store and manage broadcast logs, call statuses, and analytics for effective reporting and insights.
- Implemented custom reporting features to visualize key metrics, including success rates, call durations, and failure reasons, using Elasticsearch queries and data aggregation techniques.

Software Engineer | Techlet Solution Pvt Ltd

05/May/2021 - 26/Feb/2024

- Developed a robust **email communication system** using **Python**, integrating **SMTP/IMAP protocols** for sending, receiving, and managing emails.
- Automated email workflows and notifications, implementing features like attachments, templates, and scheduling to improve operational efficiency.
- Developed a **PHP-based content management system (CMS)** for TGI Australia, enabling easy content creation, editing, and management.
- Implemented secure **user authentication**, role-based access, and an intuitive admin panel, streamlining the client's content management process.
- Developed the **front-end** of a real-time gaming platform, **SkillSports**, using **React.js** and **Redux** for state management, ensuring smooth gameplay and user interaction.
- Implemented **real-time updates** and **user event handling** to create an immersive and responsive gaming experience, optimizing performance for high-speed interactions.

PROJECTS

Echo

- Developed the front-end of Echo using React.js, creating a responsive and user-friendly interface for seamless communication.

- Implemented real-time messaging using WebSocket to ensure instant message delivery and synchronization across devices.
- Built the back-end with python and Node.js for efficient handling of APIs and user authentication, while integrating Python for advanced data processing and analytics.
- Developed a **communication system** where only **counselors or admins** could interact with leads, while optimizing the platform to handle **load challenges** faced during high traffic, improving overall system efficiency and performance

Voice broadcasting reports

- Developed API services in Python to handle voice broadcasting data, ensuring smooth integration with both Elasticsearch and MongoDB for real-time data processing and querying.
- Utilized Elasticsearch for fast indexing and querying of large datasets, enabling efficient search and aggregation of broadcasting metrics such as success rates and call durations.
- Leveraged MongoDB to store and manage broadcast logs and detailed analytics, ensuring robust data handling and quick access for reporting.
- Built the front-end using Django to display real-time reports and visualizations, providing users with an intuitive interface for monitoring and analyzing broadcasting performance.

CMS (the george institute of global health Australia)

- Developed a PHP-based Content Management System (CMS) to efficiently collect and manage all information related to food items, including descriptions, images, and pricing.
- Implemented CRUD operations (Create, Read, Update, Delete) for managing food item data, ensuring ease of content administration.
- Integrated MySQL database to store food item details, optimizing data retrieval with efficient queries for quick access and updates.
- Designed an admin interface with user authentication to restrict access and ensure secure management of food items within the system.

SportsSkill

- Developed the front-end of a sports skill football game using React.js, ensuring a dynamic and interactive user interface with smooth gameplay.
- Utilized Redux for state management, handling user data, game progress, and player interactions across different components in a scalable and efficient manner.
- Implemented React Router for seamless navigation between game screens, enhancing user experience by maintaining state during transitions.
- Integrated Redux Thunk for handling asynchronous actions such as game data fetching and player score updates in real-time.

EDUCATION

Kanpur institute of technology

B.tech Computer Science ,CGPA (7.5)

Sardar patel inter college

12th science, per (74%)

Kanpur, India

2017-2021

Shahbajpur, U.P. India

2016-2017

ACHIEVEMENTS

- Cleared **Infosys Recruitment Process** in **2021** and **2022**, demonstrating strong technical skills and problem-solving abilities.
- Awarded **Best Innovator** in **Hackathon 2024** for developing a high-impact solution that improved team productivity by 30%
