PHONE: 575 208 4818

SUMMARY

Results-driven DevOps Engineer with 9+ years of experience in designing, implementing, and managing scalable, secure, and high-availability infrastructure solutions. Expertise in cloud platforms like AWS, Azure, and GCP, combined with strong skills in CI/CD pipeline development, infrastructure as code (IaC), and automation. Proven ability to collaborate across development and operations teams to accelerate software delivery, improve system reliability, and reduce operational costs.

SKILLS

Cloud Platforms: AWS, Azure, GCP

Infrastructure Automation: Ansible, Chef, Puppet

CI/CD Tools: Jenkins, GitLab, GitHub Actions, Bamboo

Containerization & Orchestration: Docker, Kubernetes, Helm

Programming/Scripting: Python, GoLang, PowerShell

Monitoring & Observability: Grafana, Prometheus, ELK, Splunk

Other Tools: Kafka, AppDynamics, Jira, Nagios

EXPERIENCE

Sr. DevOps Engineer

Client: Anthem Inc., Denver, CO

Feb 2024 – Present

- Spearheaded the design and implementation of a multi-cloud architecture with a primary focus on Azure, improving system resilience and reducing downtime by 40%.
- Automated the CI/CD pipeline using Azure DevOps, reducing deployment times from 2 hours to 30 minutes.
- Developed and managed infrastructure using Azure Resource Manager (ARM) templates and Terraform, enabling fast and consistent environment provisioning.

- Integrated Kubernetes (AKS) to manage containerized microservices, enabling auto-scaling and fault tolerance.
- Built comprehensive monitoring dashboards using Azure Monitor and Grafana, improving system uptime and reliability.
- Provided mentorship and training to junior DevOps engineers, improving team productivity.

DevOps Engineer

Client: Moody's, San Jose, CA

Jan 2023 – Jan 2024

- Led the migration of on-premises infrastructure to Azure, reducing infrastructure costs by 30% annually.
- Automated infrastructure provisioning using Azure Resource Manager (ARM) templates, supporting fast and repeatable deployments.
- Implemented a blue-green deployment strategy for major releases in Azure, ensuring zero-downtime rollouts.
- Collaborated with development teams to containerize applications with Docker and deploy them using Azure Kubernetes Service (AKS).
- Deployed centralized logging and monitoring solutions with Azure Monitor and Log Analytics, enhancing incident response times.
- Reduced mean time to recovery (MTTR) by 25% through improved incident management and on-call processes.

DevOps Engineer

Client: Tech Mahindra, Denver, CO

June 2022 – Dec 2022

- Orchestrated containerization of legacy applications using Docker, simplifying application deployment and scaling.
- Built and managed Kubernetes clusters (AKS) to support microservice-based applications.
- Automated application builds and deployments using GitLab CI, significantly accelerating delivery cycles.
- Created custom scripts in Python to automate repetitive DevOps tasks, reducing manual intervention.
- Collaborated with security teams to enforce compliance with cloud security best practices and policies.
- Enhanced system performance monitoring with New Relic and Datadog, ensuring rapid issue identification.

DevOps/Cloud Engineer

Feb 2021 – June 2022

Client: Data Annotation

- Established and maintained CI/CD pipelines with Jenkins, streamlining software releases.
- Automated server provisioning using Ansible, ensuring consistent and repeatable deployments.
- Supported the migration of legacy monolithic applications to microservices using Docker containers.
- Provided production support and troubleshooting for high-availability applications, achieving 99.9% uptime.
- Collaborated with software development teams to facilitate smooth transitions to microservice architectures.

Site Reliability Engineer

Client: Risk Analytics Ltd., Newark, CA

Feb 2019 – Jan 2021

- Configured CI/CD pipelines using Bamboo and Jenkins, supporting multi-environment deployments.
- Automated release processes to minimize manual errors and improve build consistency.
- Managed build artifacts using Nexus and JFrog Artifactory, ensuring version control for all deliverables.
- Assisted with performance tuning of Java-based applications, leading to a 15% increase in application speed.
- Collaborated with QA teams to ensure the successful deployment of code releases.

DevOps/Cloud Engineer

Client: RackTech Solutions, San Antonio, TX

April 2018 – Dec 2018

- Provided day-to-day support for Linux and Windows servers, ensuring system stability and uptime.
- Automated routine system administration tasks using Bash and PowerShell scripts.
- Assisted with the implementation of early CI/CD processes, enabling better integration between development and operations teams.
- Managed system health monitoring and troubleshooting to identify and resolve performance bottlenecks.
- Collaborated with the DevOps team to facilitate the transition to automated deployments and infrastructure as code (IaC).

DevOps Engineer

Client: Café Brew Inc., Seattle, WA

Aug 2016 – March 2018

- Deployed ELK stack for centralized log management and analysis, reducing troubleshooting time.
- Configured RHEL servers to support critical services in high-availability environments.
- Automated deployments using Ansible Tower, ensuring consistency across environments.
- Monitored production systems with Jenkins CI/CD pipelines, ensuring smooth software rollouts.
- Provided 24/7 on-call support for critical issues, resolving escalations promptly.
