

2/25/2025 Sudheer M

With over **14 years** in IT, including expertise in **Azure Integration, Cloud and Process Automation, Enterprise Architecture**, and AI/ML development using TensorFlow, PyTorch, and Azure Machine Learning, I have led technical projects and managed infrastructure solutions across **Healthcare, Insurance, and Manufacturing**; my experience includes roles as **an MS Azure DevOps Engineer, Build and Release Engineer, and Cloud Microsoft Azure Architect**, focusing on predictive analytics, natural language processing, image recognition, and integrating AI capabilities into cloud systems for seamless operation and resource optimization.

SPECIFIC EXPERTISE:

- **14+ years** of experience in IT industry with expertise in Cloud, Enterprise Architecture, Process Automation, Technical Lead, Infrastructure management, Build/Release Engineering, and Software development involving cloud computing platforms like **Microsoft Azure Cloud**.
- Experience in creating Azure infrastructure to manage an automation environment using azure services.
- Experienced in working on **DevOps/Agile** operations process, (Build & Release automation, unit test automation, Environment and Change Management).
- Experience in Azure Infrastructure provisioning in dealing with Azure IaaS & PaaS like **Resource Groups, Scaling Strategy, Web Roles, VM's, Storage Accounts, Security Groups, App Services, Logic API's, SQL Databases, Firewalls** using **ARM Templates, Terraform**.
- Experience in setting up Azure Firewall rules to allow or deny traffic to and from the VM's instances based on specified configurations to improve user experience and latency.
- Worked on Power Shell scripts to automate the **Azure** Cloud system creation of Resource groups, Web Applications, **Azure** Storage Blobs & Tables
- Developed multiple POCs using PySpark and deployed on the Yarn cluster, compared the performance of Spark, with Hive and SQL/Teradata.
- Experience with various DevOps and CI/CD tools like Git, Bitbucket, Jenkins.
- Experience in using **Kubernetes and Docker** for the runtime environment of CI/CD system to build test and deploy.
- Experience working on several Docker components like **Docker Engine, Hub, Machine, Docker Compose** and **Docker Registry**
- Extensive experience on developing ESB projects for the services with synchronous and Asynchronous flows.
- Experience in setting up infrastructure for database programs in SQL Server using Stored Procedures, Triggers, Views, scalar Functions, Cursors, creating SQL agent JOB and Packages.
- Experience working on several Docker components like Docker Engine, Hub, Machine, Compose and Docker
- Created Web back-end user interfaces to new and existing databases utilizing PHP and MySQL/Oracle DB
- Experienced in Content Hosting and built out Infrastructure as a Service (IaaS) private cloud **OpenStack** and deployment of Microservices using **Kubernetes, Docker** etc to production environment. Performed server.
- Experience in generating **on-demand and scheduled reports** for business analysis or management decisions using **SSRS**. Used **Power BI** to create self-service BI capabilities and use tabular models.
- I worked on Microsoft Azure Cloud platform technology, especially Azure Data Factory, Azure Data Bricks, Azure Data Lake, and Azure Synapse Analytics.
- Extract Transform and Load data from Sources Systems to Azure Data Storage services using a combination of Azure Data Factory, T-SQL, Spark SQL and U-SQL Azure Data Lake Analytics. Data Ingestion to one or more Azure Services - (Azure Data Lake, Azure Storage, Azure SQL, Azure DW) and processing the data in In Azure Databricks.

TECHNICAL SKILLS

Operating Systems	Linux, RHEL/Ubuntu/Debian/Fedora, Windows
Languages	.NET, Visual Basic, Python
Databases	MySQL, MongoDB, SQL Server
Scripts	Shell Script, ANT Script, Batch Script, Perl Script, Power Shell Script, Groovy.

Version Control/Build Tools	GIT, Bitbucket, GitHub, Jira
Web/App Server	Apache, IIS, HIS, Tomcat, WebSphere Application Server, JBoss
CI/CD Tools	Jenkins, Azure DevOps
Orchestration	Docker Swarm, Kubernetes. Portainer, Rancher
Azure Services	Azure AD, Azure Policies, Resource group, Azure cost management, Azure functions, azure run books, Azure auto manage, Azure scaling, Azure queues, Azure DevOps, Azure app service, Azure scheduler, Azure migrate, Azure traffic manager, VNet, Azure security center. ACC Ops Architect, Azure DevOps and Azure API Azure Integration, APIM
Configuration Management	Terraform, Ansible
Reporting Tools	Business Objects XIR2/6.5 (Supervisor, Designer, Business Objects)
Framework/Automation	TestNG, Page Object Model, Rest Assured, Appium, WebDriver
Robotic Process	UiPath, Blue prism,
S/W Methodologies	Water Fall Model, Iterative, Agile Programming, Agile Scrum
Other Tools	RPA Tools, SAP, IBM BPM, Microsoft Dynamics, PEGA PRPC SAP BOBI, SAP, NodeJS, Data Modelling and Data Management.

AUCONNECTS	Role: - Data Cloud Architect	Nov 2024 to till date
	- Worked on setting up end-to-end cloud infrastructure across enterprise for providing an automation solution. - Worked on data migration projects involving databases, virtual machines and automation applications using MS Azure IAAS VMs, Data Engineering, APIs. - Design, develop and test mission-critical enterprise software programs, and custom application development projects using ASP.NET Core, SQL Server, and Microsoft cloud technology. - Provide advice, guidance, and best practices around Snowflake Provide guidance on moving data across different environments in Snowflake. - Developed IoT applications using Azure IoT Hub, enabling secure communication between devices and the cloud. - Configured and maintained IIS server farms with load balancing technologies such as ARR (Application Request Routing) and NLB (Network Load Balancing) to ensure scalability and fault tolerance. - Integrated Custom visuals based on business requirements using Power BI Desktop. - Designed SSRS reports for in-depth business analyses. Designed expressions to calculate, group, filter, parameterize, and format report contents. - custom workflows, plugins, and integrations using C# and .NET to extend the functionality of Dynamics 365 - Dynamics 365 entities, forms, and views to meet specific business requirements, enhancing user experience and efficiency. - Led and executed migrations of on-premises infrastructure to Azure, ensuring minimal downtime and successful transition to the cloud. - Written Templates for Azure Infrastructure as code using Terraform to build staging and production environments. - Extensive experience in Infrastructure and Cloud in enterprise environments with end-to-end cloud-native transformation projects from on-prem to MS Azure Cloud. - Azure Cloud Services (VM, AKS, Service Bus, Storage, Load Balancer, Web Apps, etc.) - Architecture design and provide detailed solution design and solution proposal. Design and Implementation of cloud-based Project Managements system using various Azure components. Using decoupled architecture and well-defined interfaces. - Experience with Microsoft Azure Databricks, Spark and Azure Data Lake. ETL Design and development using Azure Data Factory	

2/25/2025Sudheer M

- Automated data ingestion, transformation, and loading processes from multiple sources to various destinations, including Azure Data Lake, Azure SQL Database, and Synapse Analytics.
- Integrated Azure Synapse with Azure Data Lake Storage, Databricks, and Azure Machine Learning to create a unified big data analytics platform, enabling advanced analytics and machine learning workflows.

Environment: Microsoft Azure Platform, VPC, IAM, VPN, Cloud Formation, Pyspak, Snowflake, Cloud watch, SNS, Jenkins, GIT, Ansible, Microservices, Nexus, C, .NET, Docker, Apache Webserver, KVM, Windows, Solaris, Tomcat, Red Hat, Linux, Apache, Restful, Java,

SABNEXT

Role: Cloud Infrastructure Data Engineer

Duration: June 2023 – Nov2024

Roles and Responsibilities:

- Developed and deployed PowerApps solutions leveraging both canvas apps and model-driven apps to streamline operations for Abbott's medical devices and diagnostics businesses. This improved user experience and data management.
- Developed PowerApps canvas apps with intricate logic and responsive layouts, leveraging the full capabilities of digitizing paper-based processes for managing medical device quality control, logistics, and regulatory documentation. Reduced document processing time by 80%.
- Built interactive Power Apps model-driven apps on Dataverse to optimize sales ordering and inventory management for diagnostics products. Apps integrated with Dynamics 365 CRM and ERP system.
- Created Power Automate workflows including desktop, cloud, and data flow, to automate manual processes around pharmaceuticals and nutritional supply chains. This increased efficiency.
- Leveraged C# and .NET skills to build custom connectors and integrate external APIs within the Power Platform solutions to meet Abbott's unique requirements.
- Developed interactive Power Pages web portals with embedded Power BI reports and PowerApps forms to showcase analytics and enable self-service for medical device users.
- Integrated SharePoint document libraries with PowerApps and Power Automate to optimize document management for quality assurance and regulatory compliance needs, reducing document retrieval times.
- Customized and extended Dynamics CRM to support organization sales teams and order management processes, driving adoption and data accuracy.
- Designed interactive Power BI reports and dashboards providing real-time sales, inventory, and production insights enabling data-driven decision-making across Abbott.
- Developed Power Query ETL scripts and SQL procedures to integrate Abbott's product, customer, and financial data from multiple systems like ERP, CRM, and proprietary databases into Dataverse. Enabled unified reporting using Excel and Power BI leveraging clean, consistent data.
- Built multi-lingual Chatbots with Power Virtual Agents that allow global medical device users to self-serve issues in their preferred language, improving support experience.
- Implemented proactive notifications and tips within Power Virtual Agents Chatbots to notify device users of recalls, maintenance needs, and software updates.

Integrated NLP capabilities into Chatbots, enabling them to understand and respond to natural language queries, improving user experience for Abbott requirements.

Environment: Microsoft Azure Platform, VPC, IAM, VPN, Cloud Formation, Pyspak, Snowflake, Cloud watch, SNS, Jenkins, GIT, Ansible, Microservices, Nexus, C, .NET, Docker, Apache Webserver, KVM, Windows, Solaris, Tomcat, Red Hat, Linux, Apache, Restful, Java, Python, Shell, C#, Agile, SQL server, Oracle Apps, SAP ERP, web-based legacy apps, TFS, Jira. SAP, Microsoft Applications

Roles and Responsibilities:

- Resolved all escalations from frontline across all Office 365 technologies. Final level of support interfacing with Microsoft internal product team to engage internal engineering.
- Resolved all support issues across product lines including migration, SharePoint, Skype, Intune, Exchange (admin, protection, compliance, sharing, permissions, etc.), DNS management, Office desktop products (all platforms), MDM (Mobile), compliance, security, commerce, OneDrive configuration and sync issue resolution, architecture planning and support, migration (hybrid, cutover and staged for all source platforms).
- Engaged Microsoft product teams for bug resolution and provisioning issues, deployment management, etc.
- Performed future product and feature testing and provided quality evaluation for front line technical trainings.
- Participated in Microsoft internal focus teams to assist in identifying priority and frequent issue resolution for product line. Identified alternative products and recommendations when end user was exceeding design limitations for the Office 365 product line.
- Developed several internally utilized Teams and SharePoint integrated applications to support workflows and case tracking. Worked with Microsoft engineering on emerging product design, features and testing for products such as Teams, Voice, etc.
- Utilized Power Automate to test new product lines and report on call escalations.
- Utilized Intune for bulk deployment and security requirements for deployment of cloud platform to end clients automatically.
- Assisted several customers with Integrations of Dynamics 365 F&O to Azure based SQL for the purposes of running REST-based API calls and presenting a user experience for managing different types of data utilizing SharePoint.
- Performed migrations to M365/O365 from Google Cloud Services, Google Workspace, G-SUITE, Amazon, and various other vendors to test and document processes that remediate challenges during migration.
- Established Channel Partners and developed high-end relationships with them to obtain market funding and referral business. Created company goals for technology group and proceeded with acquiring outside funding for those product lines.
- Architected, scheduled and executed a migration from Quick Books to Microsoft Dynamix AX & a parallel implementation of Microsoft Great Plains.
- Architected, managed and executed migration from enterprise collaboration software including clients and databases with on disk structure migration and re-indexing of multiple terabytes of data.

Client: INNOMINDS SOFTWARE PVT LIMITED, Hyderabad, India.**Role: Sr Software Data Engineer****Duration: March 2011 – May 2019****Microsoft | Consultant**

- Resolved all escalations from frontline across all Office 365 technologies. Final level of support interfacing with Microsoft internal product team to engage internal engineering.
- Resolved all support issues across product lines including migration, SharePoint, Skype, Intune, Exchange (admin, protection, compliance, sharing, permissions, etc.), DNS management, Office desktop products (all platforms), MDM (Mobile), compliance, security, commerce, OneDrive configuration and sync issue resolution, architecture planning and support, migration (hybrid, cutover and staged for all source platforms).
- Engaged Microsoft product teams for bug resolution and provisioning issues, deployment management, etc.
- Performed future product and feature testing and provided quality evaluation for front line technical trainings.

2/25/2025Sudheer M

- Participated in Microsoft internal focus teams to assist in identifying priority and frequent issue resolution for product line. Identified alternative products and recommendations when end user was exceeding design limitations for the Office 365 product line.
- Developed several internally utilized Teams and SharePoint integrated applications to support workflows and case tracking. Worked with Microsoft engineering on emerging product design, features and testing for products such as Teams, Voice, etc.
- Utilized Power Automate to test new product lines and report on call escalations.
- Utilized Intune for bulk deployment and security requirements for deployment of cloud platform to end clients automatically.
- Assisted several customers with Integrations of Dynamics 365 F&O to Azure based SQL for the purposes of running REST-based API calls and presenting a user experience for managing different types of data utilizing SharePoint.
- Performed migrations to M365/O365 from Google Cloud Services, Google Workspace, G-SUITE, Amazon, and various other vendors to test and document processes that remediate challenges during migration.

Project: General Mobile

Client: INNOMINDS \ General Mobiles

Environment: Android

Defect tracking: JIRA

Tools & Utilities: Python, pytest, ADB

Duration: 5 Months

Project Description:

General mobiles are a telecom company which manufacture Smart phones. The objective of this project is to discover issues by doing manual/automation testing on General Mobile Android devices with Modem, Apps, Wi-Fi, Bluetooth covering all connectivity test, concurrency and Co- ex scenario. Perform system level testing and ensure appropriate test coverage.

Roles and Responsibilities:

- High level requirement discussions and defined the test plan.
- Responsible for deliverables from QA and prepare required test artifacts
- Worked on Manual Testing, UI Testing, Regression and Functional Testing.
- Developed Monkey Scripts to generate random inputs (Key events) for checking the behavior of the application, and shared system crash logs to development team
- Developed python scripts using ADB commands to Automate test cases related to Mobile applications like Call, SMS, settings, Alarm, Camera
- Developed and maintained Automation suit for functional and regression cases
- Reporting bugs/issues observed while testing through reporting tool JIRA

Project: Profits Layout Field

Client: INNOMINDS \ Hilti, Switzerland

Environment: Android

Defect tracking: JIRA

Tools & Utilities: Python, ADB, Ranorex, MonkeyRunner

Duration: 3 years 6 months

Project Description:

PLF(Hercules) is product developed for Hilti (<https://www.hilti.com/>) which is used for people who are working in civil department. It helps the people to layout the buildings with help of PLT(Positioning Layout Tool) and Hercules product which installs on Panasonic device(Android). PLT is the device which has the laser light to know the distance and many more info. This product consists of group of Android applications: Content Provider, Data Manager, Line Transfer, Line Layout, Height Transfer, Horizontal Layout, Missing Line Mathematics, Measure and Record. Every application has a different purpose, and all are installed in Panasonic device, and it is used by Hilti customers.

Roles and Responsibilities:

- Understanding requirements of all 15 android applications
- Created the basic functional and Adversarial test plan.
- Identified and analyzed the end-to-end Scenarios/Test Cases for automation feasibility.
- Developed, maintained automated test scripts on android using MonkeyRunner in Python
- Developed Manual Test Cases to test the functionality of the application
- Executed the test cases on Simulator and Device
- Responsible in mentoring team in automation, delivering Test deliverables like Weekly and Daily Status Report.
- Trained and assigned tasks to New Team Members and Supported in finding bugs and completing deliverables.
- Reported bugs in JIRA, continuous follow-up of the status.
- Demo Walk-through to Clients.

Project : YouChat

Client : INNOMINDS \ Access Corporation

Environment: Android, iOS, Desktop

Defect tracking: JIRA

Tools & Utilities: Python, ADB

Duration: 5 Months

Project Description:

YouChat is the chat application which has the following features:

- One-One chatting
- Group chatting
- One-One File sharing
- Group file sharing

This is the chat application which has the above features, along with the application can maintain the contacts/groups in the application. This also consists of notifications when the user is not inside the application. This application also has features like Audio/Video calls and webcasting.

Roles and Responsibilities:

- Understanding requirements and business of the applications
- planning and defining team activities and resource planning.
- Created the basic functional and Adversarial test plan.
- Responsible for writing testcases for android, iOS and desktop applications
- Executed the test cases on Simulator and Device
- Responsible in mentoring team in automation, delivering Test deliverables like Weekly and Daily Status Report.
- Trained and assigned tasks to New Team Members and Supported in finding bugs and completing deliverables.
- Demo Walk-through and discussions with Clients.

2/25/2025Sudheer M

Project: Nokia CEM STC

Client: INNOMINDS \ Nokia

Environment: Android, iOS, Desktop

Defect tracking: JIRA

Tools & Utilities: Python, SQL, Postman

Duration: 1.2 Years

Project Description:

Nokia CEM is a web application, which has different modules for validating Customer Journeys and provide better experience for customers STC's main objective of customer centricity and following TMF forum. The customer journeys will be designed according to the life cycle stages and phases, besides the channels and touchpoints related, as stated by TM Forum.

Roles and Responsibilities:

- Understanding requirements and business of the applications
 - planning and defining team activities and resource planning
 - Test case preparation and execution
 - Perform End to end application testing
 - Preparing test scenarios , test cases and test data for application testing
 - Responsible in mentoring team in automation, delivering Test deliverables like Weekly and Daily Status Report.
 - Trained and assigned tasks to New Team Members and Supported in finding bugs and completing deliverables.
-
- Reported bugs in JIRA, continuous follow-up of the status.
 - Demo Walk-through to Clients.
 - Performed Functional, Regression and UAT Testing

Project : Brew MP Mobile Application Suite

Client : INNOMINDS \ Qualcomm

Environment: Windows

Defect tracking: Team track

Tools & Utilities: QXDM, Qpst, Putty

Duration: 2.5 Years

Project Description:

Brew MP is mobile application platform of Qualcomm. It leverages an object-oriented modular design that governs system architecture, security and access to all API's and services. This design provides dynamic platform extensibility across language environments (C/C++, Flash, etc.). This model provides for clean, efficient execution with minimum demand on system resources and provides for simple, task-based development. The major aim of the project is to design and develop 3G Mobile applications like Media player, Bluetooth, wallpaper, Calculator, calendar, Phone Book, Multimedia applications voice and video telephony etc., on Brew MP Platform.

Roles and Responsibilities:

- Develop & script Test cases for APIs of Font factory, Wallpaper, faded text as ellipsis in Text and static widgets and multimedia and developed new test modules.
- Developed new test modules Using C language.
- Executed the test modules on Simulator and Device
- Fixed issues/CR's in the test code.
- Verified and closed CR's.

- Prepared Functionality test cases for applications like Contacts, Calendar, phonebook, video player settings, camera and Calculator based on requirement specifications, Business logic from scratch on Jade UI.
- Developed multiple scripts using Perl for log analysis, build copy, NV items setting in Qualcomm tools

Project: Bluetooth Profiles Testing on BrewMP

Client: INNOMINDS \ Qualcomm

Environment: Windows

Defect tracking: Team track

Tools & Utilities: QXDM, Qpst

Duration: 15 Months

Project Description:

Brew MP is mobile application platform of Qualcomm. The profiles of BlueTooth2.0 and 2.1 A2DP, AVRCP, HF, HS Client are supported by using the Brew MP Bluetooth profile stack.

Roles and Responsibilities:

- Writing of System Test Cases for Music player with Bluetooth A2DP, AVRCP Profiles(Multilink Test cases) and Execution .
- Writing of System Test Cases for Voice Call with Bluetooth HF and HS Profiles (Multilink Test cases) and Execution.
- Execution of Music player, Voice calls applications with Bluetooth and taking QXDM logs and Analyzing the Logs.
- Complete execution of Music player, Voice call with Bluetooth Applications on different Qualcomm devices and Reporting Failures in Team track and Prism.

Project: Brew Jet Tools Testing

Client: INNOMINDS \ Qualcomm, India

Environment: Windows

Defect tracking: Team track

Tools & Utilities: QXDM, QPST, ATELIER

Duration: 9 Months

Project Description:

BREW is QUALCOMM's proprietary mobile platform which has extensive rich set of interfaces (APIs) that provide a wide range of services to applications. The primary objective of System Test involves extensively test BMP APIs to ensure the functionality correctness and the stability of the system before it gets released to OEM's.

Roles and Responsibilities:

- Manual testing on jet Atelier tool.
- Execution of test cases in atelier tool within time.
- Reporting and tracking of Issues with development team.
- Preparation and publication of test results/ reports for every new build release.

Project Title: Brew Jet Testing

Client: INNOMINDS \ Qualcomm, India

Tools & Utilities: QXDM, QPST, JTAG, CRASHMAN

Project Description:

2/25/2025Sudheer M

"Jet UI" is a mobile UI application which runs on BMP platform and has many mobile UI features with very low memory profile and power consumption. Apart from the default UI features like phonebook, SMS, gallery, Media, Bluetooth applications, it supports advances applications like GPS, Predictive text editor, Email and MMS with very user-friendly UI and it supports international languages.

Roles and Responsibilities:

- Developed test scripts (JET) to call and send SMS and execute all modules based on the behavior in Automation Scripts
- Execution of Concurrency tests using ASIA and reporting issues in timely manner.
- Execution of BREW Automated tests and reporting issues in a timely manner.
- Analysis and debugging of issue encountered during execution.
- Reporting and tracking of Issues with development team.
- Raise CRs in Team-track\PRISM and follow up with the concerned Tech teams.
- Preparation and publication of test results/ reports for every new build release.
- Maintenance of scripts that import test results into spreadsheets.
- Execution of stability tests (Monkey Test), running crash man and reporting crashes to the target stability teams.

Project Title: OPERAMINI ("4.5 & 6.5")

Client: INNOMINDS \ Qualcomm -OPERA

Product: BREW device

Roles and Responsibilities:

- Opera mini-Browser Testing – Performing complete Sanity testing of Opera Mini Browser
- Took ownership of testing Opera mini browser on BMP and BREW targets
- Sanity, KPI (Memory measurement) , OTA Binary Update
- Analysis and Identification of Test cases based on client requirements
- Performing Smoke testing on BMP and BREW targets once the BITE build is released.
- Performing Complete Sanity testing on Opera mini browser which includes below suites
- Discussing with Opera team for the issues found during Sanity testing.

Project Title: Build, Release Engineer & Configuration Engineer

Projects: LCU (M2M and different product lines in LCU), SC2X, SCMM, QSC.

Client: INNOMINDS \ Qualcomm, India.

Environment: Perforce, Prism, Jira

Project Description:

LCU,SC2X, SCMM, QSC & ULC is part of Qualcomm Legacy family, out this project I worked on first IOE/M2M Qualcomm solution for OEM's in collaboration with WNC & Oracle which provides automotive, smart metering, home security, industrial automation and retail solutions.

Roles and Responsibilities:

- Prepare the SCM & Build Plan for Customer projects along with Leads.
- Working closely with global development team to drive the deliveries in time.

- Create new branches in performe based on customer requirement for new features and setup new build environments for newly branched builds.
- Integrating the module source code in Target performe list files (PLF) and check in the same for incremental builds.
- Announcing daily builds to development and QA community.
- Coordinating testing team to ensure every change request is quality tested if the delivery is committed as a CS build to customer.
- Debugging the failed builds via Electric commander.
- Maintaining the Wiki pages as per the base lined specifications.
- Triggered (need to set the env before triggering) builds to check the static analysis of the builds being delivered as commercial samples to customer.
- Documented Build & Integration practices which helped a lot for the new joiners.

Project Title: BMP SYSTEM TEST

Project Description:

BMP is QUALCOMM's proprietary yet open mobile platform which has extensive rich set of interfaces (APIs) that provide a wide range of services to applications. The primary objective of system test involves extensively test these APIs to ensure the functionality correctness and the stability of the system before it get released to OEM's.

Roles and Responsibilities:

- Performing all functionality application testing of Jet versions.
- Raising CRs against team tracker and follow it up with the concern tech team developers.
- Preparation and publication of test results / reports for every new build release.
- Execution of automated tests and reporting issues in a timely manner.
- Reporting and tracking of Issues with development team.

Project Title: Timex Watch Testing

Role: Testing Team Lead

Roles and Responsibilities:

- Testing on Timex apps like Fitness, Music Mails & Settings
- Performing basic sanity tests on the build and ensure every release adheres with the quality process.
- Working closely with global development team to drive the deliveries in time.
- Preparing Release Notes for each release.
- Handling customer queries and providing them with a better solution for overall product.
- Extend working hours (24/7 support) and provide support if a customer faces any issues with build.
- Creating better UI Design according to Screen.
- Innovative develop ideas for Music UI as well as Hardware option changes.
- Implementing test case as per customer requirement
- Timex Power saver implementation.

Education:

- **Bachelor of Technology in 2010 from Jawaharlal Nehru Technological University, India.**

Certifications:

2/25/2025Sudheer M

- **Microsoft Certified: Microsoft 365 Administrator Expert (MS-102)**
- **Microsoft Certified: Teams Administrator Associate (MS-700)**
- **Microsoft Certified: Endpoint Administrator Associate (MD-102)**
- **Microsoft Certified: Azure Fundamentals (AZ-900)**
- **Microsoft Certified: Power Platform Fundamentals (PL-900)**
- **Microsoft Certified: Microsoft 365 Security Administrator (MS-500)**

AWARDS & RECOGNITION:

- Team Award received for successful implementation of 1st Source system integration at SABNEXT.
- Team Award received for successful implementation of External data.
- Individual Performer of the Quarter award for Analysis and solution designing at SAAS SOLUTIONS.
- InnoStar of the Month and Quarter for contribution on automation for multiple projects
- Worked on 24x7 customer support got spot awarded for LCU M2M – Qualcomm First M2M.
- Contract: - Certificate of Appreciation for the great efforts towards Qualcomm ODC U & L-family Customer delivery.
- Received start performer award for quick learning and product deliveries on time.
- Got Stand up appreciation from team (customer) on Timex Watch UI based Innovative ideas in Art UI design.

MANAGEMENT AND LEADERSHIP SKILLS

- Communicate effectively across levels, interface with upper management, vendors, staff, peers and users.
- Organize and direct projects with exceptional follow-through and attention to detail.
- Adopt and adapt new technologies and products rapidly.
- Conceptualize incidents leading to effective problem management.
- Team Leadership
