

- Over **5 years of hands-on experience** as a **Java Full Stack Developer**, delivering scalable solutions in Agile, Scrum, and Waterfall environments.
- Hands-on experience with **Oracle, MySQL, PostgreSQL, and MongoDB**, optimizing queries and ensuring efficient data management.
- Experienced in **AWS and Azure cloud services**, including EC2, S3, Lambda, AKS, and Azure Functions, supporting highly available deployments.
- Proficient in **CI/CD automation tools** like Jenkins, Docker, Kubernetes, and Ansible to streamline software delivery.
- Skilled in **version control systems**, including Git, Bitbucket, and SVN for seamless team collaboration.
- Strong foundation in **Object-Oriented Analysis and Design (OOAD)**, UML modeling, and standard design patterns to create maintainable code.
- Solid background in **OOP concepts, Multi-threading, Collections, Exception Handling, Lambda Expressions, and Functional Interfaces**.
- **Hands-on experience in profiling, debugging, and optimizing code performance** using Log4j, JUnit, Mockito, and Selenium.
- Experienced in **conducting code reviews and implementing best practices** to maintain high-quality, reliable code.
- Skilled in **Agile project management tools** like JIRA and Confluence for sprint planning and cross-functional coordination.
- Proficient in **Ant and Maven** for build automation and dependency management.
- Strong **problem-solving, analytical, and leadership skills**, able to work independently or within collaborative teams.
- Excellent **communication and collaboration skills**, working effectively with stakeholders, developers, and project managers.
- Expertise in **building backend applications** using **Spring Boot, Spring MVC, Spring Security, Spring Cloud, Java EE, and Hibernate ORM**.
- Skilled in **developing RESTful APIs and Microservices**, ensuring modular, maintainable, and high-performance applications.
- Proficient in **Angular, ReactJS, and JavaScript frameworks**, creating interactive single-page applications with enhanced user experience.

Technical Skills:

Languages:	Java 8, Java 11, Java 17 (JDK 1.4 – JDK 1.8), JUnit, Log4J, Ant, Maven, TypeScript, JavaScript, J2EE, Core Java
Methodologies/Design Patterns	OOAD, OOP, UML, MVC, DAO, Factory Pattern, Singleton, Agile (Scrum, Kanban), Test Driven Development (TDD)
Databases:	Oracle 11g, SQL Server, MySQL, PostgreSQL, MongoDB, DynamoDB, Firebase.
Web Technologies:	JSP, Servlets, Angular, React.JS, Node.JS, jQuery, HTML5, XML, CSS3, Bootstrap, AJAX, RESTful Web Services API
Frameworks	Spring Boot, Spring MVC, Spring Web Flow, Spring Security, Spring AOP, Spring IOC, Hibernate, Spring WebFlux, RxJava
Messaging & API Management	Kafka, MQ Series, Apache Camel, API Gateway (AWS API Gateway, Kong)
Cloud & Web Services	AWS (EC2, RDS, S3, DynamoDB, ELB, Lambda), Azure (AKS, Functions, Virtual Machines), GCP, aws cloud
Version Controls	Git, Bitbucket, SVN, Gitlab
DevOps & CI/CD Tools	Jenkins, Docker, Kubernetes, OpenShift, Ansible
API Documentation & Testing	Swagger, Postman
Monitoring & Logging	ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana
Application Servers	Apache Tomcat, Web Sphere, Web Logic, JBoss
Operating Systems:	Windows, Linux
Testing & Security	JUnit, Selenium WebDriver, OAuth2

Professional Experience:

Java Full Stack Developer

Mercury Insurance, Los Angeles, California

May 2023 to Present

Project Title: Insurance Policy Management & Risk Analytics Platform

Project Description: The project involved enhancing and maintaining Mercury Insurance's Enterprise Policy & Claims Platform, focusing on testing and implementing new features, system upgrades, and deployment activities to ensure seamless integration and high reliability. The initiative addressed moderately complex technical challenges across both cloud-native microservices and distributed applications, aligning with internal policies, compliance requirements, and industry standards. My contributions were critical in resolving technical issues, optimizing system performance, and supporting business priorities, ensuring the platform delivered accurate, timely, and efficient policy and claims processing for customers.

Responsibilities:

- Developed responsive user interfaces using **ReactJS and Angular 14**, improving user engagement by 35% through faster load times and intuitive navigation.
- Configured routing using **Angular Router** and React Router for various views and sub-modules, increasing navigation efficiency by 15%.
- Ensured secure integration of front-end components with **backend Java microservices APIs**, reducing client-side errors by 30%.
- Actively participated in **Agile/Scrum ceremonies**, including sprint planning, daily stand-ups, and retrospectives, ensuring rapid iteration and alignment with business goals.
- Developed applications using **Java 11/17 and Spring Boot**, leveraging microservices architecture to design REST APIs, improving scalability and maintainability by 25%.
- Designed and implemented **database migrations** and schema updates using Flyway and Liquibase, improving database consistency and reducing downtime.
- Implemented robust **error-handling and logging mechanisms** to reduce service interruptions and improve user experience.
- Wrote **POJO classes, DAO interfaces, and HQL/JPA queries**, optimizing data access performance by 20–25%.
- Leveraged **JPA/Hibernate** to persist data in **PostgreSQL, MySQL, and DynamoDB**, ensuring data integrity and faster retrieval.
- Developed and integrated **APIs for insurance policy and claims workflows**, ensuring seamless communication across internal systems and third-party services.
- Configured **API Gateway policies**, including OAuth2 authentication, rate-limiting, and logging for secure, compliant access.
- Implemented **message-driven architecture** using **Apache Kafka**, enabling real-time processing of insurance claims and notifications.
- Designed and deployed cloud-native applications on **AWS (EC2, S3, Lambda, RDS)**, ensuring high availability and reliability of insurance systems.
- Implemented **CI/CD pipelines** using **Jenkins, Docker, and Kubernetes**, reducing deployment time by 35–40%.
- Used **Spring Security, OAuth2, and JWT tokens** to enhance authentication, authorization, and overall application security.
- Monitored application performance using **Prometheus, Grafana, and CloudWatch**, identifying bottlenecks and optimizing system reliability.
- Diagnosed and resolved **complex multithreading and concurrency issues** in backend services to improve efficiency.
- Conducted comprehensive **unit, integration, and end-to-end testing** using JUnit and Mockito, reducing bugs by 30–35%.
- Supported **feature rollouts, upgrades, and deployments** for Mercury's Enterprise Policy & Claims Platform, ensuring minimal downtime.
- Developed **analytics modules** for policy and claims data, enabling actionable insights for risk assessment and business decisions.
- Designed **microservices-based modules** to handle high-volume insurance transactions while maintaining data consistency.

- Stored static assets and reports on **Amazon S3**, reducing page and report load times by 15% and improving system responsiveness.

Environment: Java 17, Spring Boot 3.x, Spring WebFlux, Angular 14, ReactJS, Redux, RxJS, GraphQL, gRPC, Redis, MongoDB, PostgreSQL, AWS (EC2, S3, Lambda, RDS), OpenShift, Helm, Jenkins, Docker, Kubernetes, Kafka, OAuth2, JWT, Prometheus, Grafana

Java Full Stack Developer
eKincare Health, India

Jan 2021 to Jul 2022

Project Title: Corporate Health & Wellness Management Platform

Project Description: Developed a Corporate Health & Wellness Management Platform for eKincare, aimed at enabling organizations to manage employee health benefits, wellness programs, and health checkups efficiently. The project involved modernizing legacy components, implementing microservices-based architecture, and integrating secure APIs and real-time analytics for scalable and responsive operations. The platform leveraged a comprehensive tech stack including Java, Spring Boot, Angular, React, AWS, and PostgreSQL, delivering improved performance, scalability, and user experience. Key objectives included enhancing data accessibility, ensuring compliance with healthcare regulations, and streamlining workflows for HR and employees.

Responsibilities:

- Participated in **Agile ceremonies** including sprint planning, retrospectives, and daily stand-ups to align development with business priorities.
- Developed **modular and maintainable backend services** using **Java 11, Spring Boot, and RESTful APIs**, ensuring secure integration with internal and third-party systems.
- Designed and implemented **microservices architecture**, enabling independent deployment of features and improving system scalability by 25%.
- Integrated **Angular 14 and ReactJS front-end components** with backend APIs, creating dynamic web applications and improving user interaction by 30%.
- Configured routing, data binding, and custom directives in Angular to ensure maintainable and reusable code structure.
- Implemented **Spring Security with JWT and OAuth2** to ensure application security and compliance, reducing security vulnerabilities by 35%.
- Utilized **Spring AOP and Spring Actuator** to generate method-level metrics and system monitoring dashboards, improving observability by 30%.
- Migrated legacy code and enhanced Java services using features like **Lambda expressions, Streams, and functional interfaces**, increasing processing efficiency by 20%.
- Configured **Jenkins pipelines** for CI/CD, automating build, test, and deployment processes, reducing deployment time by 40%.
- Extensively worked with **PostgreSQL and MySQL** databases, optimizing queries and schema design for high-volume employee health data.

- Developed **RESTful APIs** for corporate health programs, claims, and wellness workflows to ensure reliability and maintainability.
- Implemented **NoSQL databases (MongoDB)** to handle unstructured health data efficiently, improving retrieval and reporting speed by 25%.
- Conducted **comprehensive testing** using **JUnit, Mockito, and Cucumber**, achieving high-quality code and coverage for critical functionalities.
- Deployed applications on **AWS EC2** with auto-scaling and load balancing, ensuring 99.9% uptime and reliable service delivery.
- Leveraged **AWS Lambda** for serverless processing of health program notifications and analytics tasks, reducing operational overhead by 20%.
- Developed **microservices-based modules** for employee wellness tracking, health reports, and policy integration with third-party providers.
- Monitored and optimized **application performance** using **AWS CloudWatch** and **Prometheus** to ensure smooth and scalable operations.

Environment: Spring Boot, Microservices, Angular 14, ReactJS, Node.js, Spring Security, Spring AOP, Hibernate, PostgreSQL, MySQL, MongoDB, AWS (EC2, S3, Lambda), Jenkins, REST APIs, OAuth2, JWT, Cucumber, JUnit, Mockito, Agile/Scrum

Java Full Stack Developer
Amnet Digital, India

Jan 2020 to Dec 2020

Project Title: Java Full Stack Development for Enterprise Solutions

Project Description: Worked on developing Proof of Concept (PoC) solutions for enterprise applications within Amnet Digital's Center of Excellence (COE), focused on modernizing legacy systems and evaluating emerging technologies for business feasibility. The project involved designing scalable microservices, cloud-based solutions, and secure APIs, while implementing efficient full-stack development practices. Key objectives included rapid prototyping, improving system performance, and ensuring compliance with security and coding standards. Leveraged a comprehensive tech stack including Java, Spring Boot, Hibernate, Angular, PostgreSQL, AWS, and Docker to deliver functional prototypes that validated technical feasibility for enterprise clients.

Responsibilities:

- Developed a **Java Spring Boot-based enterprise PoC platform**, enhancing backend service performance and reducing API latency by 25%.
- Built reusable and modular **backend services and microservices**, ensuring maintainability and consistency across applications.
- Integrated **RESTful APIs and GraphQL endpoints** to optimize data flow between components, reducing redundant network calls by 30%.
- Designed and implemented **dynamic modules and validation mechanisms** in Java and Spring Boot, ensuring error-free data processing.

- Implemented **lazy loading and optimized module initialization**, improving response times for high-traffic endpoints by 20%.
- Developed **real-time dashboards and reporting modules** using Angular 10 and ReactJS, providing users with live system insights.
- Created **theme-switching and UI customization functionality**, enhancing the end-user experience.
- Improved **security and compliance** by implementing JWT-based authentication, OAuth2, and OWASP best practices, ensuring secure access to enterprise data.
- Developed **Spring Boot microservices** to handle enterprise operations efficiently, including PoC evaluation modules, system metrics, and integrations.
- Designed **REST and GraphQL APIs** for internal and external services, improving integration speed and reducing network overhead by 25%.
- Built **event-driven architecture using Kafka**, enabling real-time communication between services and modules.
- Integrated **third-party service APIs** securely for system PoC testing and data validation.
- Optimized **SQL queries and database schema design** in PostgreSQL and MySQL, improving data retrieval performance by 20%.
- Utilized **Redis caching** for frequently accessed PoC data, reducing database load and improving system responsiveness.
- Deployed applications on **AWS EC2 and S3**, ensuring high availability, scalability, and cost-efficient cloud operations.
- Leveraged **serverless components using AWS Lambda** for scheduled tasks, PoC workflows, and event processing.
- Created **CI/CD pipelines using Jenkins and Docker**, automating deployments and reducing manual intervention by 30%.
- Monitored system performance and logs using **ELK Stack (Elasticsearch, Logstash, Kibana)**, improving error detection and resolution efficiency by 40%.
- Implemented **Prometheus and Grafana dashboards** for real-time monitoring of system health, API performance, and database metrics.

Environment: Java 8/11, Spring Boot 2.x, Hibernate ORM, Microservices, Angular 10, ReactJS, Redux, REST APIs, GraphQL, PostgreSQL, MySQL, Redis, Kafka, AWS (EC2, S3, Lambda), Docker, Jenkins, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Agile/Scrum

Education:

Master of Computer and Information Sciences, Syracuse University, Syracuse, NY.
