PYTHON DEVELOPER | AI/ML | DJANGO | MACHINE LEARNING | PYTORCH | AWS | AZURE

PROFESSIONAL SUMMARY:

- Overall, **10 years** of experience as a Senior Python Developer in designing, developing, and deploying scalable web applications and backend services using **Python, Aws, Django, Flask, and Fast API**.
- Experienced in developing and deploying scalable web applications using **Python, Django, Flask, and FastAPI** frameworks.
- Proficient in designing and implementing machine learning models using frameworks like **TensorFlow, PyTorch**, and **Scikit-learn** for business intelligence and predictive analytics.
- Strong experience in analyzing and processing data using **Python, SQL, R, Excel, Hive, PySpark**, and **Spark SQL** for data mining, data cleansing, and transformation tasks.
- Hands-on expertise with **AWS cloud services** such as EC2, S3, Lambda, RDS, CloudFormation, and Glue for deploying, monitoring, and scaling applications.
- Skilled in writing complex **SQL queries**, stored procedures, triggers, functions, and packages in MySQL and PostgreSQL databases.
- Experienced in building **RESTful APIs** and integrating web services using Python and frameworks such as Flask and Django.
- Adept in working with **WAMP** (Windows, Apache, MySQL, Python/PHP) and **LAMP** (Linux, Apache, MySQL, Python/PHP) stacks.
- Strong understanding of software development principles including **SDLC, Agile methodologies, and Test-Driven Development (TDD)**.
- Proficient in using tools like **Jenkins, Docker, Kubernetes, Git, GitHub, and Jira** for version control, CI/CD, and project tracking.
- Developed and deployed AI/ML solutions for classification, regression, anomaly detection, and recommendation systems using Python.
- Skilled in working with Python IDEs such as PyCharm, Spyder, Sublime Text, and Jupyter Notebook for development and debugging.
- Hands-on experience with Unix/Linux environments and shell scripting for automation and environment setup.
- Built automated ETL workflows and integrated data pipelines using Python, SQL Alchemy, and AWS services.
- Experience in handling large-scale real-time data processing using Apache Spark, Hadoop, and Kafka for backend data operations.
- Extensive use of Python libraries like Pandas, NumPy, SciPy, and Matplotlib for data manipulation, visualization, and feature engineering.
- Worked with ORM frameworks such as Django ORM and SQL Alchemy for efficient database interaction and model management.

TECHNICAL SUMMARY:

Programming Languages	Python, JavaScript, HTML, CSS, R
Frameworks and Libraries	Django, Flask, TensorFlow, Keras, Scikit-learn, PyTorch, AngularJS, React
Machine Learning Algorithms	Supervised Learning (Regression, Classification), Unsupervised Learning (Clustering, Dimensionality Reduction), Reinforcement Learning
Deep Learning	Neural Networks (CNN, RNN, LSTM, GANs), Autoencoders, Transfer Learning
NLP Tools	NLTK, spaCy, Transformers, Hugging Face, OpenAI API
Data Science Tools	NumPy, Pandas, Matplotlib, Seaborn, SciPy
Cloud Services	AWS (Sagemaker, Lambda), Azure, GCP (AI Hub, Tensor Processing Units)
Model Deployment	Docker, Kubernetes, Flask, FastAPI, Streamlit
Version Control	Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE:

State of Oklahoma (Department of Human Services) | Oklahoma City, Ok
Senior Python Developer (Fullstack | Aws) | Jan' 2023 to Present

Responsibilities :

- Managed **AWS cloud infrastructure**, including deployment, configuration, and automation of services using **Ansible, Docker, Elastic Beanstalk, and Kubernetes**.
- Developed and deployed scalable web applications using **Python, Django, and Flask frameworks**, integrating **PostgreSQL, MySQL**, and Amazon RDS databases.
- Created serverless **RESTful APIs using AWS Lambda**, integrated with RDS triggers and managed event-driven data processing pipelines.
- Built and maintained ETL pipelines using **AWS Glue, PySpark**, and Informatica to process structured/unstructured data into Hive, Cassandra, and Oracle Data Warehouse.
- Worked with **PyMongo** to manage and consolidate data in MongoDB, generating visual reports using Pandas and Matplotlib.
- Designed and optimized data transformation jobs using **PySpark, Spark SQL, and SQL Developer** tools for performance on large-scale data.
- Implemented **CI/CD pipelines using Jenkins, Bitbucket, Git, Gerrit**, and custom Python tools to ensure smooth build and deployment cycles.
- Developed microservices in GoLang and Python with corresponding unit and integration test cases following a **Test-Driven Development (TDD)** approach.
- Built APIs and backend logic to manage datacenter resources using **Flask, SQL Alchemy, and Django REST framework**.
- Automated operational tasks using **PowerShell and Python scripts**, including scheduling, monitoring, and runbook implementations.
- Designed and maintained **XML schemas** and parsers to handle data exchange between internal services and external APIs.
- Authored complex **SQL queries, triggers, stored procedures, and views using MySQL, PostgreSQL**, and Oracle PL/SQL.
- Actively contributed to **Agile development** processes and tracked project tasks, bugs, and updates through Jira.
- Set up and maintained version control systems and helped multiple teams with repository management and **CI/CD** job setup.
- Collaborated with QA teams to develop and execute test plans, ensuring high code quality and meeting release deadlines.

Holman (Dallas, TX) | May' 2021 to Dec' 2022
Senior Python Developer

Roles & Responsibilities

- Developed and deployed serverless applications using **AWS Lambda, S3, DynamoDB, and API Gateway**, enabling scalable and event-driven architectures.
- Developed full-stack web applications utilizing **AngularJS, jQuery, and Highcharts** for enhanced user interactivity.
- Built robust data pipelines using **AWS Glue, Kinesis, Firehose, and EMR** for real-time and batch data processing.
- **Migrated over 2000 tables** from on-premises **Netezza to AWS Redshift and EMR Hive**, optimizing performance and reducing infrastructure costs.
- Built and maintained **RESTful APIs with Django Rest Framework and Flask**, incorporating secure token-based authentication.

- Automated infrastructure provisioning and deployment using **Terraform, Ansible, and AWS CloudFormation** for efficient IAC practices.
- Utilized **Boto3 scripts** to automate **AWS tasks such as EBS encryption, Lambda scheduling, and AMI lifecycle management**.
- Designed and managed scalable data warehouses using **Snowflake and Amazon Redshift** to support high-performance analytics.
- Integrated AWS services like **RDS, AuroraDB, SQS, and CloudWatch** to enable reliable, monitored, and scalable microservices.
- Built real-time data streaming applications using **PySpark on AWS EMR and Kinesis, improving ETL automation**.
- Designed and implemented **CI/CD pipelines using Jenkins, AWS CodeBuild, and ECS** for seamless deployment workflows.
- Implemented **RESTful APIs using Django Rest Framework** and Flask with token-based authentication and AWS integration.
- Created and managed secure **VPCs, ELBs, and EC2 instances** to host applications and manage network architecture.
- Enhanced monitoring and observability using **AWS CloudWatch** for performance metrics, logging, and alerting.
- Leveraged **AWS S3 for data lake storage** and integrated with **Snowflake, Tableau, and Python** for automated reporting.
- Integrated **RabbitMQ** for asynchronous message handling between **AWS microservices**, improving system decoupling.
- Developed **AI-driven cloud solutions with Python**, deploying scalable models across AWS infrastructure.
- Enforced best practices in cloud architecture, testing, automation, and documentation to ensure maintainable, high-quality solutions.

Anthem (Norfolk, VA) | May' 2018 to May' 2021
Software Developer

Roles and Responsibilities:

- Developed cloud-based **Python applications on AWS** to manage and process patient data, ensuring secure access, storage, and compliance with healthcare regulations such as **HIPAA**.
- Used Python alongside using various libraries such as Matplotlib for charts and graphs, MySQL DB for database connectivity, **Python -twitter, Panda's data frame, network**.
- Developed **Wrapper in Python** for instantiating multi-threaded application and deploy and monitor scalable infrastructure on confidential **web services (AWS)**.
- Designed automated healthcare reporting tools using **Python and AWS Lambda**, allowing healthcare providers to generate regulatory and compliance reports quickly and accurately.
- Designed and managed API system deployment using fast http server and Confidential **AWS architecture**.
- Developed frontend and backend modules using Python on Django including Tasty Pie Web Framework using Git.
- Developed **Ruby/Python scripts** to monitor health of Mongo databases and perform ad-hoc backups using Mongo dump and Mongo restore.
- Developed patient health risk analysis tools using Python and AWS services like Lambda and Redshift, processing patient history data to identify at-risk individuals for preventative care.
- Worked in **DevOps group running Jenkins** in a **Docker container with EC2 slaves** in Confidential AWS cloud configuration. Also gained familiarity with supporting technologies like Kubernetes and Mesos.
- Designed and implemented scalable healthcare data pipelines using **AWS services like Lambda, S3, and Python to process and store large volumes of patient information securely**.
- Created real-time healthcare monitoring systems using **AWS Kinesis and Python** to stream patient data from wearable devices and provide immediate alerts for critical health conditions.
- Created automated medical data reconciliation systems using **Python, AWS RDS, and S3** to verify patient records and ensure data integrity across various healthcare systems.
- Created data-driven dashboards for healthcare administrators using **Python and AWS Redshift**, providing insights into hospital performance, patient outcomes, and operational efficiencies.

- Created data-driven dashboards for healthcare **administrators using Python and AWS Redshift, providing insights into hospital** performance, patient outcomes, and operational efficiencies.
- Implemented secure data encryption and decryption processes in **Python, utilizing AWS KMS (Key Management Service)** to protect sensitive patient information in transit and at rest.
- Used **AWS CloudWatch and Python scripts** to monitor healthcare applications' performance, logging issues and creating automated alerts for system health and security breaches

Wipro (Max Communications) | India

Software Developer | May' 2014 to Aug' 2017

Roles and Responsibilities:

- Designed and developed scalable **Python-based applications** using frameworks such as **Flask and Django** to support enterprise-level solutions.
- Built event-driven data pipelines using **AWS Lambda, Kinesis, and Python** to efficiently process large volumes of data for analytics and reporting.
- Developed real-time processing systems with **AWS SQS and Python**, improving data validation and reducing system latency.
- Maintained and optimized large-scale applications for data processing, automation, and **orchestration across distributed environments**.
- Created and executed robust white-box test cases using **UnitTest, PyTest, and Robot Framework**, with tools such as **PyCharm and Ride** to ensure software quality.
- Developed **cloud-native applications** with **Python** to manage real-time data streams, improving pipeline efficiency and processing accuracy.
- Implemented data analytics solutions using **AWS Redshift and Python** to support behavioral insights and performance monitoring.
- Automated provisioning processes using **Python and AWS CloudFormation**, streamlining deployments and reducing manual effort.
- Built analytical tools with **Python and AWS S3** to process large datasets and support trend analysis and system optimization.
- Designed event-driven architectures using **AWS SNS, Lambda, and Python** to handle real-time notifications and system updates.
- Developed machine learning pipelines using **AWS SageMaker and Python** to enable predictive analytics and proactive operations.
- Created automated backup solutions using **AWS RDS and S3**, enhancing system reliability and disaster recovery readiness.
- Wrote Python scripts to automate monitoring and anomaly detection, integrating with **AWS CloudWatch and SNS for real-time alerts**.
- Used **AWS DynamoDB** with **Python** for high-performance, structured data management and fast access to system records.
- Applied **AWS CloudTrail and Python** to track API activity and ensure visibility and compliance across systems.

Environment : Aws, Python, SQL, Bash, Django, Flask, Django Rest Framework, AWS, Terraform, Ansible, Git, GitHub, Docker, ECS, Snowflake, EMR Hive, Data Lake, PySpark, Netezza, Boto3, AngularJS, jQuery, RabbitMQ, PyTest, Unit Testing, Integration Testing, Tableau, OAuth, Token-based Authentication

Education : Master's Degree in Data Science from Oklahoma City University
