SUMMARY

Futuristic Thinker Test Lead with 14+ years of experience in the IT industry with expertise in STLC (Software Testing Life Cycle), Manual Testing/Automation Testing. Recognized for team-oriented leadership, reliability, dedication, and excellent interpersonal communication skills. Good Analysis skills, Self-motivated, Quick learner, adept in learning new technologies, and able to work in both independent and collaborative work environments.

- Professional Scrum Master (PSM) 1 Certified.
- Experience in US healthcare, Casino, Finance, and e-commerce domains.
- Experienced and Motivated Agile Test Lead with 14+ years of professional IT experience in Software Testing.
- Using Azure DevOps for daily work
- Using AWS tools for Development and testing work
- Actively engaged in product and business discussions with a technical eye for feasibility and adherence to overall roadmaps and architectural strategy.
- Analyze business requirements and technical designs for testability and traceability
- Worked in Agile Development and test model, and applied Agile Test Practices - Scrum and Kanban across multiple projects.
- Strong understanding of QA Principles, QA Processes, Use Cases, and Software Development Life Cycle – Agile and Waterfall.
- Work on QA Estimate, end-to-end test Plan, Test Cases, RTM, Defect Management, Test Results, and Production Deployment Approval for the on-time delivery of all QA-related deliverables.
- Proficient in Sanity, Functional, Integration, Regression Testing, System, UAT testing, Backend Testing, GUI Testing, Accessibility testing, and UI Testing.
- Involved in designing and developing a Test Automation Framework using Java, Python, Selenium, Cypress, Geb, Spock, TestNG in Eclipse IDE and configuring to run it using Maven, Git & TeamCity, Jenkins tools (CI/CD).
- Expertise in writing Test Plans, Test Strategy documents, Test Cases, maintaining Test Scripts according to the business specifications, and Defect management.
- Experience in API Testing using Selenium and Postman.
- Build solution-driven dashboards by developing different visualizations like Heat/Geo/Tree Maps, Dual Axis, Funnel Chart, Waterfall Chart, Pie/Bar Charts, and Circle Views, Line/Area Charts, Donut Charts, Scatter Plots, Box Plots, Bullet Graphs, and Histograms in Service Visualization like Tableau Desktop.
- Used BDD or Behavior Driven Development and Test-Driven Development in Automation Implementation.
- Possess good communication and collaboration skills to effectively lead and work with diverse groups.
- Experience in testing Java, .NET, and Mainframe applications.
- Work closely with developers in the verification and validation of problems in new and existing applications.
- Expertise in establishing Risk-based Testing, Test Metrics, and Defect Management processes.
- Good understanding of SQL Server.
- Organized Sprint grooming meetings, daily scrum meetings, and retrospective meetings as a scrum master.
- Lead all phases of the project and communicate with others in the organization about the status and risks of the effort in detail.
- Responsible for Defect triage and management.
- Working Experience in EDI transactions like 270, 271, 834, 835, etc.
- Experience in working on Onsite and offshore Models to manage multiple teams at different locations.

- Experience in publishing Weekly, Bi-Weekly, and Monthly test reports (Dashboards) to higher management for review on Testing progress and plans.
- Friendly with an upbeat attitude.
- Excellent decision-making skills with a positive approach.
- Ability to multitask and prioritize, with strong organizational and follow-up skills.

PROFESSIONAL EXPERIENCE

SDET

Jun '22 — Present

NRG Energy

Houston, United States

- Leading testing team working on AEM, API testing, Automation, and manual testing on web and mobile platforms.
- Work on the Cypress automation tool to write scripts in .NET and JavaScript to cover the different scenarios in the OE version of the application.
- Write, execute, and maintain end-to-end and integration tests using Cypress, Java, and JavaScript.
- Develop and implement a Cypress Automation Framework to facilitate scripting, scalability, process definition, reusability, maintenance, and cost reduction.
- Performed UI testing using Cypress and .NET, and created a framework from scratch.
- Using Azure DevOps for task tracking.
- Worked on AWS tools for White box testing
- Developed test automation frameworks using Java and TestNG for AWS Elastic Load Balancer, ensuring high availability and efficient traffic distribution.
- Implemented API testing strategies for AWS API Gateway, verifying request and response mapping, security, and authentication mechanisms.
- Developed and maintained automated test suites for AWS SNS messaging service, ensuring reliable and timely delivery of notifications.
- Designed and executed load and stress tests for AWS DynamoDB NoSQL database, validating its ability to handle high-throughput workloads.
- Conducted integration testing for AWS SQS message queue service, verifying reliable asynchronous communication between components.
- Developed and executed functional test cases for AWS Lambda functions, validating correct behavior and response under different scenarios.
- Conducted comprehensive testing of AWS EC2 instances in a hybrid cloud environment, validating proper resource allocation and network connectivity.
- Developed and maintained a regression test suite for AWS S3 storage service, ensuring backward compatibility and system reliability.
- Created and executed automated test scripts using Cypress in Java and Playwright using JavaScript, achieving 95% test coverage for the web application.
- Proficient in writing complex SQL queries for data validation, performance analysis, and database schema verification in a PostgreSQL environment.
- Experienced in testing PostgreSQL stored procedures, functions, and triggers to ensure proper functionality and data integrity.
- Implemented accessibility testing protocols ensuring WCAG 2.1 AA compliance for all customer-facing applications.
- Supported UAT, Pre-Go Live & Go-Live testing by running automation scripts and/or manual test cases.
- Part of POC team to find new testing tool while using Cypress, and Selenium.
- Worked on the application built on HTML, Angular and Spring Boot.

- Generated comprehensive and interactive test reports using Allure Reporting, providing detailed analysis of test execution status, defects, and trends for stakeholders.
- Implemented Allure Reporting within the CI/CD pipeline, enabling automated report generation and real-time visibility into test results for continuous integration.
- Developed automated test scripts for validating AWS Lambda functions.
- Experience in core AWS services (S3, EC2, etc.) and security practices (CloudWatch and CloudTrail)
- Used MongoDB, SQL as a database in OE version, created different instances to use in the automation script.
- Worked on AEM to migrate content from SDL, and used it later in the OAM version of the application.
- Work with business and production users to support and identify the challenges and gather requirements.
- Coordinate with the vendors and in-house teams for developmental plans, Testing, and deployment plans.
- Used GIT for version controlling, collaborating with others, and managing complex software projects.
- Attended triage meetings to understand and consider the scope changes for the release during the test execution phase.
- Involved in planning and organizing the Test execution and Defect management.
- Liaised with clients for daily updates on quality issues and the development of tasks assigned.
- Participated in Bi-Weekly User Story Grooming sessions and Iteration Planning meetings with Product Owners and the Development Team.
- Participated in Iteration Retrospective meetings from the test side to discuss the problems during the iteration, defining and prioritizing action Items.
- Designed and executed load and stress tests for AWS DynamoDB NoSQL database, validating its ability to handle high-throughput workloads.

Test Lead

May '21 — May '22

TACO BELL

Irvine, United States (Remote)

- Lead Testing across different platforms, iOS, Android, and Web applications.
- Create a testing strategy and lead the QA team's efforts.
- Functional SME across the projects and Domains.
- Build knowledge within the QA team
- Work with business and production users to support and identify the challenges and gather requirements.
- Coordinate with the vendors and in-house teams for developmental plans, Testing, and deployment plans.
- Worked on AWS tools for White box testing
- Performed UI testing using Cypress and created a framework from scratch.
- Write, execute, and maintain end-to-end and integration tests using Cypress and JavaScript.
- Experience in core AWS services (S3, EC2, etc.) and security practices (CloudWatch and CloudTrail)
- Helped the DevOps Team in configuring the CI/CD Pipeline in Jenkins for executing Automation Tests after the Regression Build Deployment.
- Created and executed automated test scripts using Cypress in Java and Playwright using JavaScript, achieving 95% test coverage for the web application
- Developed automation scripts for Mobile Native applications on iOS and Android platforms using Appium and Java.
- Experience in setting up test environment for automated script execution using Appium.
- Added post-build actions like sending Email Notifications and Slack Notifications after every Automation Run.
- Integrated automation framework with BrowserStack cloud device platform to perform parallel test execution with the benefits of cross-browser, cross-platform, and cross-device automation, thus increasing test platform coverage.
- Attended triage meetings to understand and consider the scope changes for the release during the test execution phase.
- Performed A/B Testing to compare two different versions of the webpage.
- Involved in planning and organizing the Test execution and Defect management.
- Used GIT for version controlling, collaborating with others, and managing complex software projects.

- Experienced in the architecture and functionality of various customer engagement channels across Mobile and Web applications, including but not limited to Interactive Voice Response (IVR) systems, Voice integration, Live Agent Desktop (LAD) interfaces, and Live Chat solutions.
- Liaised with clients for daily updates on quality issues and the development of tasks assigned.
- Participated in Bi-Weekly User Story Grooming sessions and Iteration Planning meetings with Product Owners and the Development Team.
- Performed API testing using POSTMAN.
- Worked on the application built on HTML, Angular and Spring Boot.
- Participated in Iteration Retrospective meetings from the test side to discuss the problems during the iteration, defining and prioritizing action items.
- Supported UAT, Pre-Go Live & Go-Live testing by running automation scripts and/or manual test cases.
- Implemented Allure Reporting within the CI/CD pipeline, enabling automated report generation and real-time visibility into test results for continuous integration.
- Work on the Cypress automation tool to write scripts in JavaScript to cover the different scenarios
- Develop and implement a Cypress Automation Framework to facilitate scripting, scalability, process definition, reusability, maintenance, and cost reduction.
- Worked on the Onsite/Offshore model with 15 team members in the testing team

QA Test Lead

Jan '19 — Nov '20

Russell Investments (Compunnel Inc)

Seattle, WA, United States

- Used C#.NET as a programming language and Visual Studio as an IDE for automating the Test Suite with Selenium WebDriver
- Tested the games developed in .NET.
- Led the build of automation for test scenarios and scripts using Selenium WebDriver.
- Build an Automation Framework using Continuous Integration and Development (CI/CD) services.
- Enabled continuous integration of automated test scripts in GitHub with TeamCity to run regression test suites. Make sure the build is successful for all check-ins in TeamCity.
- Performed API testing using POSTMAN.
- Created and implemented BDD Cucumber Test Automation Frameworks from scratch using Java, REST Assured, Selenium WebDriver, Maven, Page Object Model, JUnit, and Gherkin language.
- Generated Cucumber reports with screenshots for non-technical stakeholders
- Improved quality by Creating Queries and stored procedures in SQL Server
- Accomplished user's confidence in the product by performing GUI Testing, Functional Testing, and System Testing
- Used Python and JavaScript in automation testing
- Providing status updates and metrics to client management.
- Involved in planning and organizing the Test execution and Defect management.
- Liaised with clients for daily updates on quality issues and the development of tasks assigned.
- Participated in Bi-Weekly User Story Grooming sessions and Iteration Planning meetings with Product Owners and the Development Team.
- Worked on the application built on Angular and Spring Boot.
- Led and participated in Iteration Retrospective meetings from the test side to discuss the problems during the iteration, defining and prioritizing action items
- Prepared Estimations, Resource Plans, Project Plans, and Test Plans Identify Risks/ Issues and update the project progress on time.
- Created weekly, bi-weekly, and monthly reports for higher management using Tableau.
- Suggest and strategize a test approach to meet timelines and estimates

- Played the role of the Scrum Master and organized sprint planning, grooming, and retrospective meetings for every sprint.
- Led daily scrum meetings.

Senior Engineer II

Mar '15 — Mar '17

Aristocrat

Noida, India

- Worked as a Team Lead and got the maximum approved games in the ANZ market Tested the games developed in C++ and C#.
- Used Java as a programming language and Eclipse as an IDE for automating the Test Suite with Selenium WebDriver.
- Completed testing of the games with full ensures of compliance and regulations in over 200 jurisdictions, categorized broadly into 3 markets: USA, Australia & New Zealand, (ANZ), and Rest of the World (ROW).
- Assisting businesses by being able to deliver a machine learning project from beginning to end, aggregating and exploring data, building and validating predictive models, and deploying completed models to deliver business impacts to the organization
- Accomplished the latest standards by executing checklists and constantly updating checkpoints.
- Assured Test game types such as AVL, GDK, EGP, Vertex, and MSP controlled hyperlink built on the MK7, Gen8, ARC, and Behemoth architecture.
- Inspected localization testing for games submitted to Macau and Latin markets.
- Participated in scrum meetings, Sprint Planning, sprint grooming, and Sprint Retrospect for every sprint.
- Improved quality by Creating Queries and stored procedures in SQL Server
- Delivered games for the Final approval authority for Aristocrat slot games to transfer to ATF with zero defect rejections.
- Member of Defect Triage Team.
- Used GIT for version controlling, collaborate with others, and manage complex software projects.

Senior Quality Engineer

May '11 — Mar '15

Impetus Infotech India Pvt. Ltd

Noida, India

- Led the team on the HealthPlus project and achieved "No-Defect" found on the client end
- Facilitate requirement analysis, backlog grooming, backlog ordering, reporting, and sprint planning.
- Tested the applications developed in .NET and Java.
- Administered backlog creation.
- Enhance client satisfaction through effective resolution of critical technical issues in coordination with various support teams.
- Worked on the Individual Family Plan (IFP), Small Group (SG), and Large Group (LG) segments of Health Insurance. Communicate regularly with Clients as a Business Analyst.
- Used Java as a programming language and Eclipse as an IDE for automating the Test Suite with Selenium WebDriver.
- Used Python and JavaScript in automation testing
- Improved quality by Creating Queries and stored procedures in SQL Server Automate regression flow using Geb and Spock.
- Prepared test cases and test plans.
- Part of the Analysis team in finding the unused code to improve the system's performance
- Interact with customers to ensure their requirements (user stories) are complete and accurately depict their business needs. Analyze user requirements.
- Part of the scrum team participated in a daily scrum daily, and was part of sprint planning, sprint grooming, and sprint retrospective for every sprint.
- Worked on EDI transactions like 270, 271, 834, 835, and 837
- Interacted with Claims, Payments, and Enrollment, hence analyzing and documenting related business processes.
- Liaised with clients for daily updates on quality issues and the development of tasks assigned.
- Created Automation scripts using JAVA in Selenium.

- Used GIT for version controlling, collaborating with others, and managing complex software projects.

Setup Configuration Specialist

Mar '09 — Mar '11

Aon Hewitt

Noida, India

- Analysis by gathering the requirements and client provisions.
- Cleaning of requirements at the initial phase of the requirement gathering
- Holding Regular Analysis/Configuration/Test Planning Handoffs, and their respective notifications.
- Worked on HealthCare Enrollment Notifications such as COE, COC, etc.
- Fixing the bugs found during testing.
- Performed data validation and mainframe testing in an interactive mainframe environment
- Communication with Onsite as well as Offshore Team.
- Creating Test Plans as per the Requirement Specification.
- Plans are provided to the customer based on their status, like Active, HIPAA, COBRA, etc.
- Creating Queries, stored procedures in SQL Server
- Reporting and documentation.

EDUCATION AND CREDENTIALS

Master of Business Administration in Information Technology, Ottawa University
Phoenix, United States

Apr '20 — Jan '22

Master of Science in Business analysis, Grand Canyon University
Phoenix, United States

Sep '17 — Jan '19

Masters in Computer Applications in Computer Science and IT, University of Jammu
Jammu, India

Aug '05 — Jun '08

Bachelor of Computer Applications in Computer Science and IT, University of Jammu
Jammu, India

Sep '02 — Jun '05

PROFESSIONAL CERTIFICATIONS

Professional Scrum Master PSM 1

ACHIEVEMENTS

Winning Ways Award

Aristocrat

Received Winning Ways Award three times.

YOU ARE A STAR Award

Impetus Infotech India Pvt. Ltd

Received the 'YOU ARE A STAR' Award five times.

STAR OF THE MONTH Award

Impetus Infotech India Pvt. Ltd

Received 'STAR OF THE MONTH' Award seven times.

Superlative Award

Impetus Infotech India Pvt. Ltd

Received Superlative award from leadership for low operational cost and generating revenue ensuring high quality.

Enthusiastic Client Certificate

Aon Hewitt

Received enthusiastic client certificate twice for delivering high quality on time.

SKILLS

Programming Languages: Core Java, Python, .Net, C++, C#, VB Scripting, Unix, SQL, Unix Shell script

Testing Tools: Geb & Spock, Selenium WebDriver, Cypress, Appium, TestNG, JMeter

Defect Tracking: JIRA, HP ALM, Test Director, StarTeam, Spira Team

Automation Tools: Selenium WebDriver, Cypress, Appium, TestNG, JMeter, Postman, REST Assured

API Testing: REST API Testing, API Automation, AWS API Gateway, Lambda Testing

CI/CD Tools: Jenkins, Azure DevOps, TeamCity, GitHub Actions, Git

Testing Methodologies: Agile, Waterfall, BDD, TDD

Database: MongoDB, SQL Server, PostgreSQL, DynamoDB
