OBJECTIVE

Results-driven .NET Developer with over 8 years of experience in designing, developing, and maintaining web and client-server applications. Proficient in .NET frameworks, cloud technologies, and microservices, delivering scalable and high-performing solutions. I am passionate about clean code, best practices, and continuous learning. Skilled in designing and implementing modern software architectures, optimizing system performance, and collaborating with cross-functional teams. Adept at problem-solving and innovation, ensuring high-quality code and seamless user experiences. Seeking an opportunity to contribute expertise in a challenging, growth-oriented environment to enhance software efficiency and user experience.

PROFESSIONAL SUMMARY

- 8+ years of hands-on experience in designing, developing, and maintaining enterprise-grade applications using .NET technologies, including .NET Core 3.1, .NET 5, .NET 6, and .NET 7.
- Expert in C# and ASP.NET Core Web API, with strong expertise in developing and optimizing data processing components using Entity Framework Core (Code-First approach).
- Proficient in unit testing and test automation, leveraging frameworks such as MSTest, TypeMock, Microsoft Fakes, and Rhino Mocks to ensure high-quality, maintainable code.
- Extensive cloud experience with Microsoft Azure, deploying and managing scalable applications using Azure App Service, Azure Functions, Azure Kubernetes Service (AKS), API Management, App Configuration, and Key Vault.
- Strong DevOps and CI/CD expertise, implementing Azure DevOps, Git, and GitHub Enterprise to streamline development, testing, and deployment workflows.
- Deep knowledge of SOLID principles, RESTful API architecture, and Test-Driven Development (TDD) to ensure robust, scalable, and maintainable application architectures.
- Skilled in logging and monitoring solutions, using Azure Application Insights and Splunk for proactive troubleshooting, performance tuning, and system observability.
- Experienced in authentication and authorization security frameworks, including OAuth 2.0, OpenID Connect, IAM, and SAML, ensuring data protection and regulatory compliance.
- Well-versed in Agile/Scrum methodologies, collaborating with cross-functional teams, mentoring junior developers, and ensuring continuous integration and delivery of high-quality solutions.
- Committed to building secure, scalable, and high-performance applications, prioritizing stability, portability, and interoperability to meet enterprise software demands.

TECHNICAL SKILLS

Category	Technologies
Programming Languages	C#, .NET (7.0/6.0/5.0/4.5), VB.NET, Python, JavaScript, TypeScript
Web Technologies	ASP.NET Core, MVC, Razor Pages, Blazor, REST APIs, GraphQL, OData
Frontend Frameworks	Vue.js, Angular, React, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, Tailwind CSS, Material UI
Database Management	SQL Server, Cosmos DB, PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, CouchDB, Azure Blob Storage
ORM Tools	Entity Framework, Dapper, NHibernate
Cloud Platforms	Microsoft Azure (including Azure App Service, App Service Environment, Azure Functions, Logic Apps, Azure Kubernetes Services, Azure API Management, Azure App Configuration, Azure Key Vault, Azure AD), AWS, API Gateway, Azure DevOps
Microservices & Containers	Docker, Kubernetes, RabbitMQ, Kafka, gRPC
Authentication & Security	Identity and Access Management (IAM), OAuth 2.0, OpenID Connect, SAML, SSL/TLS, Role-Based Access Control (RBAC), Azure Active Directory (AAD)
CI/CD & DevOps	Azure DevOps, Git, GitHub Enterprise, GitHub Actions, Azure Pipelines, Jenkins, Terraform, Ansible
Testing & Debugging	xUnit, NUnit, MSTest, Moq, Selenium, Postman
Logging & Monitoring	Serilog, NLog, ELK Stack, Application Insights
Software Development Practices	SOLID Principles, CQRS, Factory, Strategy, Singleton, Dependency Injection, Test-Driven Development (TDD)

Agile Methodologies	Scrum, Kanban, Sprint Planning, Code Reviews, Continuous Integration & Deployment (CI/CD)
Protocols	HTTP, HTTPS, TCP/IP, WebSockets, MQTT, AMQP, SOAP, FTP, SFTP

PROFESSIONAL EXPERIENCE

Client: Fiserv, Berkeley Heights, NJ

May 2023 -Present

Role: Sr. Full Stack .NET Developer

Description:

At Fiserv, I worked as a Sr. Full Stack .NET Developer, focusing on developing and optimizing financial applications. My role involved building secure, scalable, and high-performance banking solutions, ensuring seamless transaction processing and data security. Implementing microservices architecture improved modularity, API performance, and system scalability.

Responsibilities:

- Developed robust RESTful APIs using ASP.NET Core Web API, enabling seamless and efficient data exchange across multiple banking systems.
- Designed and implemented microservices architecture leveraging Docker, Kubernetes (AKS), and RabbitMQ, improving modularity, fault tolerance, and scalability.
- Developed responsive and dynamic UIs using Vue.js, TypeScript, and Vuex, ensuring seamless banking experiences with interactive dashboards and real-time data updates.
- Implemented reusable Vue.js components to improve maintainability, enhanced form validations, and secured authentication workflows with OAuth2 & JWT.
- Integrated RESTful APIs with Vue.js, handling secure API calls, authentication flows, and real-time updates for financial transactions.
- Optimized UI performance with lazy loading, caching strategies, and Vue Router-based navigation, ensuring smooth client-side rendering and faster load times.
- Leveraged asynchronous programming (TAP) in .NET to optimize backend processes, improving system responsiveness for high-load financial operations.
- Employed caching strategies using Redis and in-memory caching, reducing latency and accelerating transaction processing speeds.
- Implemented authentication and authorization protocols using OAuth2, JWT, and RBAC (Role-Based Access Control), ensuring financial data security and compliance.
- Enhanced SQL Server performance by optimizing queries with indexing, stored procedures, and efficient data handling techniques.
- Integrated Kafka and RabbitMQ for event-driven architectures, ensuring real-time fraud detection, transaction monitoring, and secure asynchronous messaging.
- Configured logging and monitoring solutions with Serilog, ELK Stack, and Azure Application Insights, enabling proactive diagnostics and performance tracking.
- Automated CI/CD pipelines using Azure DevOps and GitHub Actions, ensuring streamlined code deployments and minimized downtime.
- Managed containerized services on Azure Kubernetes Service (AKS), ensuring high availability and rapid scaling of applications.
- Utilized Azure Blob Storage and Azure Functions for secure data storage, background processing, and disaster recovery solutions.
- Worked in an Agile/Scrum environment, collaborating with cross-functional teams to drive fast iterations and continuous improvements.
- Designed Infrastructure as Code (IaC) solutions with Terraform and Ansible, automating environment provisioning and configuration management.
- Conducted code reviews, mentored junior developers, and promoted best practices to enhance the overall quality and efficiency of frontend and backend architecture.
- Troubleshooted and resolved production issues quickly, ensuring minimal disruption to banking services and enhancing system reliability.

Software Tools: Vue.js, Vuex, TypeScript, Vue Router, Bootstrap, Tailwind CSS, ASP.NET Core, Web API, Entity Framework Core, Dapper, SQL Server, RabbitMQ, Kafka, Docker, Kubernetes (AKS), Azure DevOps, Terraform, Ansible, OAuth2, JWT, Serilog, ELK Stack, xUnit, NUnit, Postman, Selenium.

Client: FactSet, Norwalk, Connecticut

June 2021 – April 2023

Role: Software Engineer

Description:

At FactSet, I worked as a Software Engineer, developing and optimizing financial data and risk analytics applications for investment professionals. My focus was on building scalable, high-performance solutions that efficiently processed vast amounts of real-time market data. The project aimed to deliver intuitive user experiences, data-driven insights, and real-time financial reporting with interactive visualizations.

Responsibilities:

- Designed and developed interactive financial dashboards using Vue.js and TypeScript, providing seamless user experiences for financial analysts.
- Implemented real-time data visualization with Chart.js, D3.js, and Highcharts, enabling users to monitor stock trends and portfolio performance.
- Optimized UI performance with lazy loading, virtual scrolling, and component memoization, ensuring a smooth experience for large datasets.
- Integrated state management solutions using Vuex and Redux, maintaining consistent data flow and synchronization across financial applications.
- Developed and optimized RESTful APIs using ASP.NET Core and Web API, ensuring secure, high-speed financial data processing.
- Implemented GraphQL and OData APIs for efficient querying of large-scale financial datasets, reducing API response times.
- Managed SQL Server and PostgreSQL databases, optimizing indexing, stored procedures, and query execution plans for faster financial calculations.
- Enabled high-speed transaction processing and ensured data integrity, supporting mission-critical financial operations.
- Built event-driven architectures using Kafka and RabbitMQ, ensuring real-time financial transaction processing and seamless data flow between services.
- Developed modular financial microservices using ASP.NET Core and Docker, enhancing scalability and fault tolerance.
- Implemented caching layers with Redis, significantly reducing API response times for frequently accessed financial data.
- Integrated secure authentication mechanisms, including OAuth2, JWT, and multi-factor authentication, ensuring compliance with financial security regulations.
- Implemented role-based access control (RBAC) to enforce strict authorization policies for financial applications.
- Automated background jobs using Quartz.NET and Hangfire, streamlining scheduled financial reporting and notifications.
- Developed audit logging and data tracking systems, ensuring compliance with regulatory reporting requirements and real-time monitoring of system activities.
- Managed CI/CD pipelines using Azure DevOps, automating builds, testing, and deployments to streamline financial application releases.
- Deployed financial microservices on Azure Kubernetes Service (AKS) for scalability, reliability, and fault tolerance.
- Configured API gateways with Ocelot and managed reverse proxies with Nginx, securing APIs and ensuring efficient traffic handling.
- Implemented disaster recovery strategies with Azure Backup, Storage Replication, and Infrastructure as Code (Terraform, Ansible) to ensure system reliability.

Software Tools: Vue.js, Vuex, TypeScript, ASP.NET Core, Web API, GraphQL, OData, Entity Framework Core, Dapper, SQL Server, PostgreSQL, RabbitMQ, Kafka, Redis, Docker, Kubernetes (AKS), Azure DevOps, Terraform, Ansible, OAuth2, JWT, Serilog, ELK Stack, xUnit, NUnit, Postman, Selenium.

Client: Trek Bikes, Waterloo, WI

Aug 2018 – May 2021

Role: Full Stack .NET Developer

Description:

At Trek Bikes, I worked as a Full Stack .NET Developer, focusing on the development of e-commerce and customer management applications. My primary responsibilities included implementing scalable, efficient, and high-performance solutions for handling product catalog management, order processing, and payment gateway integrations. Additionally, I played a critical role in improving UI/UX and enhancing backend processing efficiency to optimize the customer purchasing experience.

Responsibilities:

- Developed responsive UI components using Angular, Bootstrap, and TypeScript to enhance the shopping experience, designing interactive product display pages and customer account interfaces that improved engagement and usability.
- Integrated Redux for state management to handle dynamic shopping cart operations, ensuring consistent data flow and smoother real-time order processing across the application.
- Built real-time order tracking dashboards that provided live status updates, increasing transparency for customers and boosting overall satisfaction with the shopping experience.
- Enhanced mobile responsiveness and ensured cross-browser compatibility using Bootstrap and CSS Flexbox/Grid, delivering a seamless experience for users on any device.
- Applied lazy loading and caching mechanisms to improve front-end performance, reducing load times and optimizing resource usage for faster page rendering.
- Developed robust form validation logic and secure user input handling to ensure transaction security and data integrity during the checkout process.
- Integrated the Google Maps API for real-time store location and inventory tracking, providing users with accurate, location-based information to find nearby stores and available products.
- Created RESTful APIs using ASP.NET Core and Web API to manage customer orders, payments, and inventory effectively, streamlining back-end processes and ensuring efficient data exchange.
- Implemented a microservices architecture to modularize order processing, customer profiles, and product management, improving scalability and simplifying future updates.
- Optimized SQL Server queries and indexing to enhance response times for high-traffic product searches, while integrating payment gateways like PayPal and Stripe to secure and streamline transactions.
- Developed asynchronous background jobs using Hangfire to automate order processing and customer notifications, while establishing role-based access control with OAuth2 and JWT for secure user accounts.
- Automated CI/CD pipelines using Azure DevOps, deploying applications in a Dockerized Kubernetes environment, and configured Azure Blob Storage for secure management of product images and customer invoices.
- Monitored system health and application performance using the ELK Stack and Application Insights, implemented disaster recovery plans with Azure Backup and Replication Services, and automated infrastructure provisioning with Terraform and Ansible.

Software Tools: Angular, Redux, TypeScript, ASP.NET Core, Web API, Entity Framework Core, Dapper, SQL Server, RabbitMQ, Docker, Kubernetes, Azure DevOps, Terraform, Ansible, OAuth2, JWT, Serilog, ELK Stack, xUnit, NUnit, Postman, Selenium, Stripe, PayPal API, Google Maps API.

Client: HashTag Technologies, Coimbatore, India

June 2016 – July 2018

Role: Jr. .NET Developer

Description:

At HashTag Technologies, I worked as a Jr. .NET Developer, contributing to the development and enhancement of enterprise-level applications across multiple industries. My role focused on assisting senior developers in designing and implementing scalable, high-performing software solutions while gaining hands-on experience in .NET development, database management, and system optimization. The work involved migrating legacy applications, building dynamic web applications, and improving system reliability.

Responsibilities:

- Developed and maintained web applications using ASP.NET Web Forms, MVC, and C#.
- Assisted in designing and developing RESTful APIs to support various business functionalities.
- Performed SQL Server database management, including query optimization, indexing, and stored procedures.
- Integrated third-party APIs for external data processing and payment gateway solutions.
- Designed and implemented user-friendly UI components using JavaScript, jQuery, and Bootstrap.
- Provided bug fixing, troubleshooting, and performance enhancements to existing applications.
- Worked closely with senior developers to migrate legacy applications to modern frameworks.
- Participated in Agile development processes, attending daily stand-ups, sprint planning, and code reviews.
- Assisted in CI/CD pipeline setup using Azure DevOps and Jenkins.
- Conducted unit testing and integration testing to ensure the reliability and functionality of applications.

Software Tools: ASP.NET Web Forms, ASP.NET MVC, C#, SQL Server, MySQL, Entity Framework, jQuery, Bootstrap, Web API, IIS, Azure DevOps, Jenkins, xUnit, NUnit, AJAX

EDUCATION

University of Massachusetts Lowell, Lowell, Massachusetts, USA

May 2024

Masters of Science in Computer Science

Relevant Coursework: Data Structures and Algorithms, Cloud Technologies, Data Base, Machine Learning, Artificial Intelligence

Mahatma Gandhi Institute of Technology, Hyderabad, India

May 2017

Bachelor of Technology in Electronics and Communication Engineering

Relevant Coursework: Data Structures, Real Time Operating Systems, Object Oriented Programming through C++, Problem Solving

CERTIFICATION

Microsoft Certified: Azure Developer Associate (AZ-204)
