

SARIKA KAPU

DevOps Engineer

+1 (551) 727-4741 | sarikareddy955@gmail.com | <https://www.linkedin.com/in/SarikaKapu/>

SUMMARY

Certified DevOps Engineer with around 9 years of experience in automating CI/CD pipelines, managing cloud infrastructure (AWS, Azure, GCP), and orchestrating containerized applications with Kubernetes. Skilled in infrastructure as code (Terraform, Ansible), monitoring and logging (Prometheus, Grafana, ELK Stack), and optimizing cloud deployments for scalability and security. Proficient in scripting (Python, Bash) and fostering cross-functional collaboration to streamline development workflows.

TECHNICAL SKILLS

Cloud & Infrastructure: Azure, AWS, GCP, Docker, Kubernetes, Helm, Terraform.

Monitoring and Logging: Prometheus, Grafana, Elasticsearch (ELK Stack), Splunk

Collaboration & Version Control: Git, GitHub, JIRA, Confluence

CI/CD & Build Tools: GitHub Actions, Jenkins, Maven, Gradle

Security Tools: HashiCorp Vault, Keycloak, SonarQube, Wiz

API & Other Tools: Kong (API Gateway), Swagger/OpenAPI, Nagios.

Programming: Python, Bash, JavaScript, YAML

WORK HISTORY

DevOps Engineer

RS Dragon Technologies LLC | Dallas, United States

03/2025-Present

- Assisted in managing and maintaining applications on AWS, contributing to ensuring high availability and performance.
- Supported the configuration, monitoring, and optimization of AWS resources using Terraform to improve application performance and reduce costs.
- Helped configure AWS Organizations, Service Control Policies (SCPs), and AWS Identity Center roles for governance and compliance.
- Assisted with managing AWS Route 53 for DNS configurations and domain management.
- Assisted in maintaining version control using Git and ensured proper branching strategies in collaboration with development teams.
- Worked on and closed Renovate pull requests in GitHub repositories to maintain up-to-date dependencies and ensure code stability.

DevOps Engineer

OTTO Payments GmbH | Hamburg, Germany

10/2022–02/2025

- Built and optimized software delivery pipelines and developer support tools to streamline application deployment.
- Designed and implemented fully automated CI/CD pipelines using GitHub Actions, reducing manual intervention and boosting development efficiency by 30%.
- Implemented cost-effective monitoring with Prometheus, Grafana, OpenTelemetry, ELK Stack, and Splunk, achieving a 40% cost reduction.
- Created Docker images using Dockerfile and deployed them into AWS EKS clusters using Helm Charts, improving scalability and deployment speed.
- Automated infrastructure provisioning and deployment using Terraform and AWS CloudFormation, ensuring consistent and scalable environments.
- Managed and optimized AWS infrastructure components, including EC2, S3 (with cross-region replication), IAM, VPC, ECS, Transit Gateway, Lambda, EKS, SQS, and SNS.
- Deployed Kong API Gateway on NGINX and integrated it with Keycloak for secure, role-based authentication, enabling scalable and efficient API management across microservices.
- Designed a real-time log streaming pipeline using AWS Kinesis and Lambda to restructure and enrich logs before forwarding them to Splunk, improving log traceability and reducing ingestion latency.
- Configured AWS Organizations and GCP Organizations, implementing Service Control Policies (SCPs) and AWS Identity Center roles to ensure governance, security, and compliance across multi-cloud environments.
- Designed and implemented AWS Transit Gateway to optimize inter-VPC communication and reduce networking complexity across multiple AWS accounts.
- Developed and maintained custom Helm charts, optimizing Kubernetes resource configurations for scalability and performance.
- Integrated Wiz with Kubernetes by deploying sensors to enable CSPM and scan for vulnerabilities and misconfigurations.

- Created and maintained API documentation using Swagger and OpenAPI Specification for streamlined API integration.
- Developed event-driven workflows by processing events from product teams via AWS SQS and triggering automated customer email notifications through AWS SES, enhancing real-time customer engagement.
- Integrated HashiCorp Vault for secure secrets management.
- Developed Python and Bash scripts to automate repetitive tasks.
- Designed and implemented fault-tolerant disaster recovery strategies.
- Work closely with the development team to identify requirements and implement solutions.

DevOps Engineer

Winjit Technologies Pvt Ltd | Bangalore, India

07/2021 – 10/2022

- Designed and maintained Azure cloud infrastructure using Terraform and Azure Resource Manager (ARM) templates.
- Responsible for creating Docker images from Dockerfiles and managing containers using Azure Container Instances (ACI) and Azure Kubernetes Service (AKS).
- Created and maintained the development operations pipeline and systems, including continuous integration, continuous deployment, and code review tools.
- Configured and managed Azure services like Virtual Machines (VMs), Virtual Networks (VNet), Load Balancers, Azure Active Directory (AAD), and Blob Storage.
- Set up automated pipelines in Azure DevOps to trigger deployments.
- Conducted upgrades and optimizations to improve infrastructure performance.
- Monitored system health and performance using Azure Monitor and Application Insights, proactively addressing issues.
- Troubleshoot and resolved build issues, working closely with development teams.
- Documented infrastructure setups, security protocols, and DevOps workflows in Confluence to streamline onboarding and project handovers.
- Conducted upgrades and optimizations to improve infrastructure performance.
- Monitored system health and performance, proactively addressing issues.
- Troubleshoot and resolved build issues, working closely with development teams.
- Documented infrastructure setups, security protocols, and DevOps workflows in Confluence to streamline onboarding and project handovers.

System Engineer

Tata Consultancy Services Pvt Ltd | Bangalore, India

04/2018 – 07/2021

- Implemented CI/CD pipelines using Jenkins for automated builds and deployments, leveraging AWS services such as EC2, S3, and Lambda for scalable infrastructure.
- Created Ansible playbooks for server configuration and infrastructure management, automating deployment and provisioning of AWS resources.
- Configured and maintained Nagios for system health monitoring, integrated with AWS CloudWatch to monitor infrastructure performance and alerts.
- Integrated SonarQube for continuous static code analysis in CI/CD pipelines, deployed on AWS EC2 instances for scalable build and analysis.
- Managed both cloud (AWS) and on-premises infrastructure, ensuring seamless operations by using AWS services like EC2, S3, RDS, and VPC for optimized cloud solutions.
- Automated builds and managed dependencies using Maven and Gradle, with artifact storage on AWS S3 for efficient build management.
- Worked in Agile teams, using JIRA for sprint planning and task tracking, coordinating with AWS resources for agile infrastructure management.
- Managed source code with Git and implemented effective branching strategies for seamless CI/CD.
- Documented AWS infrastructure setups (EC2, S3, VPC, IAM) for easy onboarding and project handovers.
- Coordinated AWS infrastructure changes and deployments, working with cross-functional teams.

Frontend Web Developer

Tata Consultancy Services Pvt Ltd | Bangalore, India

01/2017 – 03/2018

- Developed dynamic, single-page web applications using Angular, focusing on responsive UI design and enhancing user experience with component-based architecture.
- Built and integrated RESTful APIs using Node.js and Express.js to facilitate seamless communication between frontend and backend services.
- Managed MySQL databases, optimizing queries for efficient data handling.
- Utilized Git for version control, handling branching, merging, and pull requests.
- Conducted code reviews and followed best practices for clean, maintainable code.

EDUCATION

Jawaharlal Nehru Technological University | Anantapur

06/2014 – 04/2018

Bachelor's in computer science and engineering
