

SR. PYTHON DEVELOPER

GOPI THOTA

+1 (781) 600-6696

gopit6696@gmail.com

CAREER OBJECTIVE:

A seasoned Python Developer with over 10 years of experience in designing, developing, and maintaining scalable, high-performance applications across industries, including finance, healthcare, and technology. I have a proven track record of delivering robust backend systems, streamlining workflows, and building secure, cloud-based solutions for global enterprises. My goal is to leverage my extensive expertise in Python, data analysis, and systems architecture to drive innovation and provide exceptional solutions to complex challenges in leading organizations.

PROFESSIONAL SUMMARY:

- ❖ Expertise in designing, implementing, and maintaining secure and scalable Python applications, focusing on performance optimization and high availability.
- ❖ Extensive experience with Python frameworks like Django and Flask to build flexible, reliable applications for a variety of business needs.
- ❖ In-depth understanding of cloud platforms, including AWS and Azure, to design cloud-native applications that scale seamlessly and support business continuity.
- ❖ Proficient in building and integrating RESTful APIs, ensuring smooth and efficient communication between backend services and frontend applications.
- ❖ Led the development of Python-driven data pipelines in automating complex data workflows and reducing manual processes across multiple teams.
- ❖ Designed and implemented microservices architectures for large-scale applications, driving scalability and modularity in the system.
- ❖ Developed secure and efficient data processing scripts in Python, working with large datasets in real-time to derive actionable insights.
- ❖ Played a key role in optimizing Python-based systems for handling real-time transaction processing at Mastercard, ensuring smooth and reliable payment services.
- ❖ Contributed to the migration of legacy systems to modern Python-based frameworks, improving system maintainability and performance.
- ❖ Applied advanced data analysis techniques to healthcare data developing tools for predictive analytics and improving patient care outcomes.
- ❖ Led the implementation of Python-based automation solutions, reducing manual tasks, improving efficiency, and streamlining business processes.
- ❖ Ensured compliance with regulatory standards by implementing secure, HIPAA-compliant systems for safeguarding sensitive patient information.
- ❖ Worked closely with database teams to optimize database queries and implement efficient data management practices using SQL, PostgreSQL, and MongoDB.
- ❖ Delivered custom Python-based applications for real-time reporting and data visualization, enhancing business decision-making.
- ❖ Contributed to building a comprehensive Python testing framework, driving quality assurance across all projects and ensuring high-quality deliverables.
- ❖ Integrated third-party payment gateways and APIs enhancing payment processing capabilities and improving transaction accuracy.
- ❖ Developed secure user authentication systems and protocols, ensuring robust security for web applications.

- ❖ Utilized Python libraries and tools such as Pandas, NumPy, and PySpark to process and analyze large volumes of financial and healthcare data.
- ❖ Led the integration of cloud-native architectures and serverless computing using AWS Lambda and EC2 to enhance operational efficiency.
- ❖ Played an instrumental role in the development of data-driven machine learning models for fraud detection and business analytics utilizing Python's data science libraries.

Technical Skills:

Languages & Frameworks: Python (Django, Flask, FastAPI), JavaScript (React, Angular, Node.js), HTML5, CSS3, and Bootstrap, TypeScript, jQuery, AJAX

Databases: SQL (MySQL, PostgreSQL), NoSQL (MongoDB, Redis), ORM (SQLAlchemy, Django ORM)

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, API Gateway), Docker, Kubernetes, CI/CD (Jenkins, GitLab CI, CircleCI), Git, GitHub, Bitbucket

Testing: pytest, unittest, Selenium, Cypress for automated testing

Tools & Libraries: Celery, Redis, RabbitMQ, RESTful API design, JSON, XML data handling, Swagger for API documentation

Other Skills: Microservices architecture, Agile methodologies (Scrum, Kanban), Security best practices (OAuth, JWT, encryption), Serverless architecture

PROFESSIONAL EXPERIENCE:

Sr. Python Full Stack Developer | Master Card | Chicago, IL

May 2023 – Till Date

Responsibilities:

- ❖ Designed and developed of an advanced payment gateway integration system using Python and Django for secure online transactions.
- ❖ Developed and maintained RESTful APIs for seamless communication between the frontend and backend services, ensuring secure payment processing.
- ❖ Implemented a real-time fraud detection system utilizing machine learning models built with Python (Scikit-learn, TensorFlow) to identify and prevent fraudulent transactions.
- ❖ Integrated third-party payment processors (e.g., Stripe, PayPal) with the MasterCard payment system, ensuring robust and scalable payment solutions.
- ❖ Employed AWS Lambda and S3 for serverless deployment and managed cloud storage for transaction data.
- ❖ Led the development of microservices to handle specific payment processing tasks, optimizing system efficiency and scalability.
- ❖ Incorporated logging, monitoring, and alerting systems using AWS CloudWatch and ELK Stack (Elasticsearch, Logstash, Kibana) for real-time error detection and resolution.
- ❖ Implemented continuous integration and deployment (CI/CD) pipelines using Jenkins and GitLab CI to automate testing and deployment.
- ❖ Ensured compliance with PCI-DSS and other security standards to safeguard customer payment data.
- ❖ Optimized database queries for faster transaction processing, utilizing MySQL and PostgreSQL with Django ORM.
- ❖ Wrote unit and integration tests using pytest and Selenium to ensure the accuracy and reliability of payment systems.
- ❖ Led troubleshooting sessions and provided production support for payment system-related issues.

- ❖ Contributed to documentation and API specifications using Swagger and Postman for internal and external teams.
- ❖ Ensured data encryption and secure transmission of sensitive payment information using HTTPS and SSL/TLS protocols.
- ❖ Maintained high availability and reliability of the payment gateway system with zero downtime during peak transaction periods.

Environment: Python, JavaScript (React), HTML, CSS, Django, AWS Lambda, S3, Docker, Kubernetes, MySQL, PostgreSQL, Jenkins, GitLab CI, Swagger, Selenium, AWS (EC2, Lambda, S3, RDS), Docker, Kubernetes

Sr. Python Full Stack Developer | CVS Health | Irving, TX

March 2021 – April 2023

Responsibilities:

- ❖ Developed and maintained a Prescription Management System using Flask and React for tracking prescriptions and providing medication alerts to customers.
- ❖ Designed and implemented REST APIs for managing patient prescriptions, ensuring secure data handling and smooth integration with third-party healthcare services.
- ❖ Integrated AWS S3 for secure storage of prescription data and AWS RDS for relational database management.
- ❖ Built user authentication and authorization mechanisms using JWT and OAuth to ensure the privacy of patient data.
- ❖ Implemented background task processing using Celery and Redis to handle prescription processing asynchronously.
- ❖ Enhanced the user experience by building interactive and responsive front-end components with React.js.
- ❖ Improved system security by implementing encryption techniques for sensitive patient data, adhering to HIPAA compliance.
- ❖ Worked with cross-functional teams to gather requirements and design features that aligned with business needs.
- ❖ Participated in agile ceremonies, including sprint planning, daily stand-ups, and retrospectives.
- ❖ Led efforts to improve the scalability of the system by optimizing database queries and introducing caching mechanisms using Redis.
- ❖ Deployed the system to AWS, utilizing EC2 instances for scalable infrastructure and S3 for static content delivery.
- ❖ Integrated automated email notifications and SMS alerts to remind patients about prescription refills and appointments.
- ❖ Introduced GitLab CI/CD pipelines to automate testing, building, and deployment processes, reducing deployment time.
- ❖ Optimized front-end performance by reducing bundle size and improving load times.
- ❖ Developed reporting and analytics features for internal stakeholders to track prescription trends and patient interactions.

Environment: Python (Flask), JavaScript (React), HTML, CSS, Flask, AWS, Redis, Celery, React.js, MySQL, PostgreSQL, AWS (EC2, S3, RDS), GitLab CI

Python Developer | Dell Technologies | Remote

Jan 2018 – Feb 2021

Responsibilities:

- ❖ Designed and implemented an Enterprise Resource Planning (ERP) system that integrated multiple business functions such as finance, HR, and supply chain management.

- ❖ Developed microservices in Python using Django to handle specific ERP functions, ensuring modularity and ease of maintenance.
- ❖ Worked on developing REST APIs for real-time communication between different modules of the ERP system.
- ❖ Utilized PostgreSQL for managing relational data and implemented database optimizations for faster query execution.
- ❖ Designed and implemented role-based access control (RBAC) to ensure proper data segregation and access for different user roles.
- ❖ Developed comprehensive reporting and analytics modules that provided real-time insights into business operations using Python (Pandas, Matplotlib).
- ❖ Integrated email and SMS notification services to alert users of critical events in the ERP system.
- ❖ Led the transition from legacy systems to a cloud-based ERP solution hosted on AWS EC2 instances, reducing infrastructure costs.
- ❖ Ensured that the ERP system complied with industry regulations and internal security standards.
- ❖ Developed an intuitive dashboard using React.js for administrative users to monitor business activities and key performance indicators.
- ❖ Implemented CI/CD pipelines with Jenkins for automated testing and deployment of code to production.
- ❖ Assisted in the migration of data from on-premise servers to AWS cloud, ensuring smooth transition and minimal downtime.
- ❖ Developed an inventory management module, integrating real-time stock tracking with suppliers and internal databases.
- ❖ Ensured that the system was scalable and could handle an increasing volume of transactions by implementing caching and load balancing.
- ❖ Enhanced the security of the application by implementing multi-factor authentication and SSL/TLS encryption for all data transactions.

Environment: Python (Django), JavaScript (React), HTML, CSS, AWS, PostgreSQL, Django, Celery, Jenkins, GitHub, Docker

Jr. Python Developer | Sify Technologies | India

June 2015 – Dec 2017

Responsibilities:

- ❖ Created backend services for internal applications using Python, ensuring that all features met user requirements and adhered to system specifications.
- ❖ Designed, implemented, and test new features for the company's web applications, focusing on enhancing user experience and system performance.
- ❖ Identified and resolved issues in existing Python applications, performing debugging tasks to ensure stability and functionality of the software.
- ❖ Written clean, reusable, and modular code to ensure efficiency, readability, and maintainability across the entire codebase, following best coding practices and guidelines.
- ❖ Designed and optimized database queries, ensuring efficient interactions between the Python applications and the relational databases (MySQL/PostgreSQL).
- ❖ Developed RESTful APIs to expose business logic to other services and applications, ensuring proper integration with both internal and third-party systems.
- ❖ Managed and tracked code changes using Git, participating in collaborative workflows, such as feature branching and pull requests, to maintain code integrity and streamline teamwork.

- ❖ Monitored application performance and implemented strategies to improve the scalability and responsiveness of backend services.
- ❖ Contributed to maintaining comprehensive documentation for code, databases, and APIs, ensuring that other team members and future developers could understand the project's architecture and functionality.
- ❖ Written and executed unit and integration tests for new and existing features to ensure reliability, stability, and correctness of the application.
- ❖ Ensured smooth integration between the frontend interface and the backend, resolving issues related to data exchange and API endpoints.
- ❖ Integrated third-party tools and libraries, such as data visualization libraries, to enhance application functionality and provide additional features, like data reports and analysis.
- ❖ Ensured the security of the web applications by assisting with implementing secure data handling practices, including input validation and the prevention of common vulnerabilities.
- ❖ Implemented improvements in the development process, code efficiency, and deployment pipelines, contributing to better overall team productivity.
- ❖ Improved technical skills by staying updated with new Python libraries, frameworks, and best practices, applying new knowledge to improve the team's development workflows and code quality.

Environment: Python, SQL, Flask, Django (basic), RESTful APIs, MySQL, PostgreSQL, Git, Jenkins, Docker, Agile/Scrum, Continuous Integration (CI)
