

KRISHNA BORRA | Full Stack Java Developer

Location: TX, USA | **Phone:** (361)-306-6388 | **Email:** krishnaborra04@gmail.com | [LinkedIn](#)

SUMMARY

- Accomplished Full-Stack Java Developer with 5+ years of expertise in Java, J2EE, Python, and Node.js, adept at creating scalable and high-performance applications.
- Proficient in front-end technologies including HTML5, CSS3, JavaScript, TypeScript, and frameworks such as ReactJS, AngularJS, and Vue.js.
- Experienced in back-end development using Spring, Hibernate, Struts, and integrating systems with RESTful APIs, GraphQL, and SOAP.
- Skilled in managing databases like MySQL, PostgreSQL, Oracle, and MongoDB, with a strong background in PL/SQL and Cassandra.
- Developed high-performance, non-blocking microservices using Eclipse Vert.x for asynchronous and event-driven architectures.
- Integrated external SaaS services for user authentication, payment gateways, and third-party APIs, including OAuth-based auth providers and analytics platforms, streamlining data exchange and improving user experience by 25%.
- Competent in deploying and managing applications on web and application servers such as IBM WebSphere, WebLogic, and Apache Tomcat.
- Proficient in cloud platforms AWS, Azure, and GCP, utilizing containerization with Docker and Kubernetes for efficient deployment and orchestration.
- Experienced in designing and implementing scalable microservices architectures, leveraging Kafka for real-time data streaming, and ensuring high availability and fault tolerance in distributed systems.
- Experienced with version control and CI/CD tools including Git, GitLab, Jenkins, and CircleCI, and adept in monitoring and logging using ELK Stack, Prometheus, and Grafana.

TECHNICAL SKILLS

Programming Languages: Java, J2EE, Python, Groovy, TypeScript, Ruby, Go Lang, Shell scripting, C++

Web Technologies: HTML5, CSS3, Tailwind, XML, JavaScript, jQuery, ReactJS, Node.js, AngularJS, Vue.js, AJAX, SOAP, JSON, RESTful APIs, gRPC, GraphQL

Frameworks & Libraries Spring, Hibernate, Bootstrap, Struts, Tiles, DWR, Apache Camel, JSF, Play Framework, Cucumber, Kafka, Spring AI, Spring Security

J2EE Technologies Servlets, JDBS, JSP, JMS, EJB, JMS (ActiveMQ, RabbitMQ)

Databases: MySQL, PL/SQL, PostgreSQL, Oracle, SQL Server, Cassandra, MongoDB

Cloud Platforms: AWS, Azure, GCP

Operating Systems: Windows, Unix, Linux, Mac OS X

Tools:	SVN, Git, GitLab, Bitbucket, CVS, Jenkins, GitLab CI, CircleCI, IntelliJ IDEA, NetBeans, STS, Visual Studio, ELK Stack, Prometheus, Grafana, Splunk, Maven, Swagger, OpenAPI, Eclipse, Docker
---------------	---

PROFESSIONAL EXPERIENCE

Geico

Dec 2023 – Present Full Stack

Java Developer

- Developed scalable backend systems using Java 8, Spring Boot, Node.js, and ReactJS to enhance service performance, achieving a 20% improvement in data processing speed.
- Refactored monolithic systems into microservices using Spring Cloud and Docker, reducing system downtime by 30% and improving scalability.
- Architected and deployed cloud-native solutions with AWS (EC2, S3, RDS, Lambda), achieving high availability and efficient data processing across environments.
- Implemented Spring Security with OAuth 2.0 for secure user authentication, reducing security incidents by 35%.
- Implemented gRPC-based microservices using Spring Boot to enable efficient, low-latency communication between distributed systems, enhancing service interoperability and reducing payload sizes compared to RESTful APIs.
- Engineered enterprise web applications using Spring MVC framework for implementing MVC architecture, enhancing modularity and maintainability.
- Implemented secure authentication using Spring Security with OAuth 2.0. Engineered backend services in Golang and Node.js, optimizing performance with complex SQL procedures across Oracle and MySQL databases.
- Built end-to-end data pipelines using GCP services such as BigQuery, Dataflow, Cloud Composer (Airflow), and Cloud Storage, enabling real-time analytics and batch processing for large-scale datasets.
- Built responsive, component-driven UIs using React.js with hooks, context API, and state management libraries (Redux/Zustand), achieving seamless SPA performance and high user engagement.
- Integrated Spring AI with LLM providers (e.g., OpenAI, Azure OpenAI, Hugging Face) to build intelligent, conversational features in Java applications, leveraging prompt engineering, embeddings, and vector store retrieval using Spring Boot.
- Engineered high-performance backend services with Node.js and Express, integrating with MongoDB/PostgreSQL and implementing JWT-based authentication, resulting in secure and scalable APIs.
- Designed and documented RESTful APIs with Swagger and OpenAPI, accelerating API onboarding for teams and enhancing cross-service communication.
- Automated scheduled jobs using Spring Batch and Cron, reducing manual intervention by 50% and improving system reliability.
- Automated log aggregation and alerting with CloudWatch and Lambda-based custom notifications, enhancing operational visibility across distributed systems.
- Enhanced monitoring and alerting using custom Splunk dashboards and OpenShift integrations, enabling proactive issue resolution and system reliability.
- Automated infrastructure provisioning with Terraform and integrated Kafka for scalable, fault-tolerant data streaming across distributed systems.
- Ensured code quality and coverage through JUnit, Mockito, and API testing with Postman; maintained clear API documentation using Swagger.
- Built RESTful APIs and documented them using Swagger and OpenAPI.
- Automated batch processes using Spring Batch and scheduled them using Cron.
- Deployed containerized microservices via Docker and AKS, improving deployment velocity and ensuring seamless CI/CD integration.
- Managed build pipelines with Maven and Gradle and led Agile sprints using Jira, improving collaboration and sprint velocity.

- Used Docker and AKS (Azure Kubernetes Service) for containerization and deployment.

Charter Communications

June 2022 – Dec 2023

Java Developer

- Designed and built microservices using Spring Boot, secured with Spring Security.
- Engineered scalable backend applications with Spring Framework and Spring Boot to support Spectrum services, improving system efficiency and service uptime by 25%.
- Architected and deployed RESTful APIs for partner integrations, cutting response time by 40% and improving data consistency across platforms.
- Integrated Vert.x WebClient for non-blocking, asynchronous HTTP calls to third-party services.
- Developed dynamic, responsive UIs using AngularJS, TypeScript, and CSS3, enhancing UX and boosting user satisfaction scores by 15%.
- Adopted Test-Driven Development (TDD) with JUnit and Mockito, achieving 90% code coverage and reducing production bugs by 50%.
- Built scalable, maintainable SPAs using Angular with RxJS, Angular Material, and NgRx for state management, enabling responsive and user-friendly interfaces across devices.
- Automated infrastructure with AWS CloudFormation and Terraform, streamlining CI/CD pipelines and reducing environment setup time by 30%.
- Optimized database access using JPA and Hibernate, reducing query latency by 20% and enhancing backend performance.
- Engineered backend services in Go with Gorilla Mux/Fiber frameworks, optimizing concurrency and memory usage, and implemented RESTful APIs with PostgreSQL and Redis for high-throughput data processing.
- Managed cloud resources in AWS and Azure, using tools like Elastic Beanstalk, Terraform, and AKS.
- Consumed and exposed REST APIs with proper versioning and OpenAPI documentation.
- Orchestrated containerized microservices using Docker, Kubernetes, and OpenShift, accelerating deployment cycles and enhancing system scalability.
- Implemented blue/green deployment strategies and automated rollback mechanisms on AWS ECS, reducing deployment risks and downtime.
- Partnered with cross-functional Agile teams using Jira and Confluence to translate business needs into technical solutions, driving delivery through collaborative code reviews and iterative improvement.
- Improved front-end performance using React Query and optimized backend queries for reduced response time.

CVS Health

Dec 2021 – June 2022

Java Developer

- Developed backend logic using Spring Boot, Hibernate, and REST APIs.
- Designed responsive web apps using HTML5, CSS3, and JavaScript, improving cross-device compatibility and reducing average page load time by 30%.
- Created Angular 10 components and forms with strong validation and modularity.
- Developed robust server-side logic and RESTful APIs with Spring Boot, improving API efficiency and reducing request latency by 20%.
- Managed Azure DevOps release pipelines for multi-environment deployments, incorporating approval gates, environment variables, and infrastructure as code with ARM templates and Terraform.
- Implemented CI/CD pipelines with Jenkins and containerized deployments on AWS.
- Integrated RabbitMQ for asynchronous messaging and microservices decoupling.
- Deployed and maintained microservices on AWS (EC2, S3, RDS), achieving high availability and fault tolerance across multi-region systems.
- Developed and supported performance-critical applications in C/C++, enhancing processing speed and maintainability through object-oriented best practices.
- Collaborated with cross-functional teams to integrate Java applications with backend services via RESTful APIs, reducing integration time by 30%.
- Automated CI/CD pipelines with Jenkins and Git, cutting deployment time by 50%; containerized applications with Docker to ensure consistency across environments.
- Performed unit/integration testing with JUnit and Mockito, improving test coverage and reducing post release bugs by 40%; validated API functionality using Postman.
- Boosted test coverage through TDD and BDD using JUnit, Cucumber, and Mockito.

Cisco

May 2020-July 2021

Java Developer

- Designed multi-layer applications using Spring, Hibernate, and Angular.
- Developed scalable multi-layer applications using Spring MVC, Hibernate, and Struts, applied design patterns (MVC, Singleton, Strategy, Factory, Façade) to solve architectural challenges.
- Built REST and SOAP web services and consumed them on the front-end via AJAX/JSON.
- Created reusable Angular components, utilized Angular CLI and Reactive Forms, and performed client/server-side validations to enhance form handling and user experience.
- Designed front-end UIs using HTML5, CSS3, JavaScript, jQuery, Bootstrap, and DOM manipulation, improved accessibility and responsiveness across browsers and devices.
- Integrated Spring Framework for Dependency Injection, linking the presentation layer with persistence using Hibernate/JPA via ApplicationContext.xml.
- Interfaced with RESTful APIs using GET, POST, PUT, and DELETE methods, and implemented data handling with JSON, XML, and parsing techniques.
- Managed server-side logic using Servlets and JSPs and implemented custom tag libraries and rolebased access control in the UI.
- Automated CI/CD and testing pipelines using JUnit, Mockito, Selenium, Jasmine, Karma, Protractor, and Cypress, achieving 95% test coverage.
- Utilized GitHub for version control and Log4j for runtime exception tracking and debugging.

ITC Infotech, Hyderabad

May 2019-April 2020

Software Developer-Intern

- Migrated applications to microservices with Spring Boot and RESTful architecture.
- Developed responsive UIs using Angular 6, TypeScript, and Angular Material.
- Developed enterprise applications using Java and J2EE technologies, including Spring, EJB, JSP, JDBC, and Struts.
- Migrated monolithic applications to microservices architecture using Spring Boot, REST APIs, and Spring MVC.
- Built dynamic UIs using Angular 4/6, Angular Material, TypeScript, and Bootstrap; implemented reusable components and routing modules.
- Integrated Node.js for server-side logic and wrote effective JavaScript to support network communications and API interactions.
- Designed and implemented backend modules using Singleton and Session Facade design patterns.
- Used JSF and Ajax frameworks for UI development, along with JSF tags and navigation rules for enhanced user interaction.
- Utilized Angular HTTP client to make Ajax calls, loading data into tables, modals, and grids efficiently.
- Supported test teams by resolving bugs and performing unit/integration testing with Selenium.
- Implemented scheduled batch processes via Spring Batch.
- Built integration logic using Apache Camel, RabbitMQ, and JDBC

EDUCATION

Master of Science in Computer Science

Texas A&M University, Corpus Christi, USA

Aug 2021 – May 2023

Bachelor of Computer Science and Engineering

Anna University, India

Mar 2016 – Apr 2020
