SUMMARY OF QUALIFICATIONS

- Analytical and enthusiastic data engineer with over 8 years of experience in the technology industry, specializing in **Data Modeling, Data Transformation, Data Visualization**, and building **Data Pipelines**
- Skilled in optimizing **ETL** pipelines, and automating workflows with tools like **Databricks** and **Azure Data Factory** with proficient knowledge in **Python** and **SQL**
- Accustomed to working closely with data scientists and stakeholders to understand business needs and develop comprehensive data models
- Extensive experience in Snowflake architecture, design, implementation, and operationalization of large-scale data and analytics solutions on **Snowflake** Cloud Data Warehouse
- Strong proficiency in handling real time data streaming using **Apache Kafka** and data visualization tools such as **Power BI** and **Tableau**.
- Skilled in handling large Datasets using **Python**, automating **ETL**, and extracting data from **RESTful** API, Azure Storage, FTP servers
- Skilled in designing and managing large-scale data warehouses using **Azure Synapse Analytics**, optimizing ETL pipelines, and automating workflows with tools like **Azure Data Factory**, **Informatica** and **Apache Airflow**
- A collaborative team player experienced in **Agile** and Waterfall methodologies, with hands-on experience in multiple programming languages and version control systems

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, SQL, Hive, C, C++, Unix, PowerShell
- **Cloud Technologies** Azure Data Factory, Databricks, Synapse Analytics, Stream Analytics, ADLS, Apache Kafka, Spark
- **Database Systems:** Azure SQL Server, Oracle, Hadoop, Snowflake, Delta Lake, HDFS
- **Tools & Applications:** Apache Airflow, GitHub, DevOps, Jenkins, Kafka, Informatica, Power BI, Tableau, DBT, ADF

EDUCATION

Master of Applied Computing

Sep 2019- Dec 2020

University of Windsor - Windsor, ON, Canada

Bachelor of Information Technology

Aug 2011- April 2015

Malla Reddy Engineering College – Hyderabad, India

WORK EXPERIENCE

Senior Data Engineer, JLL, Dallas, TX

March 2024 - Present

Project Technologies: ETL, Databricks, ADF, ADLS, REST API, Python, Spark, Synapse, Power BI, Airflow, DBT

JLL is a Dallas based real estate and investment management firm, offering a wide range of services across commercial real estate, facilities management, and investment advisory.

- Developed and optimized scalable **ETL** workflows leveraging **Databricks**, **Python**, **Apache Spark**, and **Azure Synapse**, enabling efficient data processing, and integrating large real estate datasets
- Designed and optimized scalable **Azure Data Factory** pipelines to process sales invoice datasets from **Azure Data Lake** and **REST APIs**
- Leverage **DBT**, SQL Pools and **Spark** Pools in Azure Synapse to efficiently manage and process large-scale datasets from **ADLS** that improved data processing efficiency by 30%
- Designed, configured, and managed **CI/CD** pipelines in **Azure DevOps** to streamline **ETL** processes and data workflows

- Implemented **Apache Airflow** to orchestrate and automate **ETL** workflows, ensuring efficient scheduling, monitoring, and error handling for data pipelines across diverse sources
- Deployed the initial Azure components like Azure Virtual Networks, Azure Application Gateway, Azure Storage and Affinity groups
- Collaborate with stakeholders to understand data needs and provide actionable insights
- Expertise working on Fact and Dimensional (Product Information) tables in **Oracle** and **Azure SQL Server** and developing **PL/SQL** scripts based on business requirements
- Designed and maintained complex ETL pipelines using **Apache Airflow**, leveraging DAG-based orchestration to automate data ingestion, transformation, and error alerting for high-volume, mission-critical workflows.
- Decreased database load by 26% by refactoring data structures and implementing an update on event cache

IT Data Engineer, Pernod Ricard (Hiram Walker & Sons Limited), NYC

01/2023 - 02/2024

Project Technologies: Data Hubs, ADF, SQL Server, Snowflake, ADLS, DAX, Power Query, Power BI, Spark SQL, Python

Pernod Ricard is a French multinational company and one of the largest producers of wine and spirits.

- Developed and maintained full-fledged key digital sales transformation program, **DSTAR**, to empower sales team with right actionable insights and recommendations that improved sales efficiency by 40%
- Developed Data pipelines using **Azure Data Factory** to feed different **data models/data hubs** and ensure pipeline stability
- Responsible for extracting data from multiple sources, transforming it into **Azure SQL Server**, and ingesting it into **Azure Data Lake Storage (ADLS)** and **Snowflake**, providing reliable datasets for data scientists
- Designed and deployed data models to Azure Analysis Services, and integrated with Power BI to deliver interactive dashboards and strategic insights
- Created interactive **Power BI** Dashboards, using Data Analysis Expressions (**DAX**) for calculations, **Power Query**, KPIs and reports for Monthly Metric analysis to replace traditional excel
- Utilized Azure **Databricks**, **Python** and **Spark SQL** to develop and optimize scalable data pipelines, enabling efficient data processing and analysis within cloud environments
- Managed and resolved various types of request errors encountered in web environments while monitoring ETL pipelines
- Performed data migrations to the SQL database using Django's migration tool
- Worked in agile environment following incremental and iterative solution delivery

Data Engineer, GAP Inc, CA

03/2021 - 12/2022

Project Technologies: Hadoop, HDFS, Hive, SQL, ETL, AKV, Java, Kafka, Azure, JSON, AVRO, ADP, UNIX, Informatica

Gap Inc is an American worldwide clothing and accessories retailer based in California.

- Designed, developed, and managed real-time data streaming platform and consolidated retail purchase invoices and e-commerce sales data from multiple sources into SQL server
- Worked on **Hadoop** to store retail clickstream data in **HDFS**, process it using **Hive** to generate insights about user behavior
- Developed and optimized ETL workflows in **Informatica** PowerCenter, designing complex mappings and transformations to ensure high data quality, efficient processing, and adherence to business SLAs
- Expertise in handling various data sources like flat files, JSON, YAML, AVRO, CSV, GPG encrypted files and real time data feeds through **Kafka**
- Supported multiple business partners to build campaigns for email marketing and automate data sends to multiple vendors by orchestrating the data using **Informatica**
- Worked with multiple vendors to develop various data feeds as per business requests and share data sets in **GPG** encrypted format on scheduled basis to multiple downstream including data scientists
- Experience in data processing includes collecting, aggregating, and moving data into marketing Data warehouse systems using Oracle Toad and SQL Loader
- Created views along with joints, groups, and aggregations in SQL by merging and/or summarizing data from various sources as required to build **Tableau** dashboards
- Produced continuous data feed to Kafka platforms by encrypting the Personal Identifiable Information (PII) data using **Kafka** helper class and **Azure Key Vault**

Software Engineer / Data Engineer - Windsor, Canada

08/2020 - 12/2020

University of Windsor

- Designed and developed **REST APIs** to facilitate seamless data communication between the backend systems and the website
- Extensive experience in data engineering, working with large-scale data infrastructures, and optimizing ETL processes
- Developed an ETL system to replace an existing data pipeline built on DTS using Python 2.7 and SQL Server
- Collaborated with stakeholders to enhance website functionality and improve user experience
- **DevOps** knowledge (Jenkins, Bitbucket, Gitlab, Terraform), Testing Automation

Data Engineer, Capgemini – India

08/2015 - 07/2019

Project Technologies: ETL, PLSQL, T-SQL, ADF, ADLS, REST API, Python, Airflow, PowerShell

Client - Synchrony Bank project involved developing a mobile banking application that provided customers with insights into their spending on their monthly bills

- Created **PLSQL** scripts and views for customer promotion alerts data and developed **REST APIs** to expose data to mobile banking application
- Ensured compliance with data safety standards by encrypting and decrypting Personally
- Identifiable Information (PII) according to European regulations
- Optimized existing long running queries by 70% using Execution Plan in **T-SQL**
- Developed automation solution using **PowerShell** scripting for day-to-day operational tasks
- Modification of Certs, Password and Storage Accounts on the cloud platform Setting up and administer service accounts
- Worked on Configuration of Internal load balancer, load balanced sets and Azure Traffic manager.
- Configured Azure Active Directory and managed users and groups.

CERTIFICATIONS:

- IBM Certified Big Data Foundations – L2 [Credential Link](#)
- Complete SQL Bootcamp - [Credential Link](#)
