

Tsegai Gebreyesus

Java Backend Developer

Tjgebreyesus@gmail.com | (669) 250-5406 | San Jose, CA 95117

LinkedIn: <https://www.linkedin.com/in/tsegay-gyesus/>

Results-driven Java Backend Developer with expertise in optimizing system efficiency and enhancing user experiences. Led Microservices teams to consistently achieve on-time project delivery rates of 98% and maintain customer satisfaction scores of 9.5/10. Reduced data processing times by Apache technologies, resulting in improvement in data handling capabilities. Enforced Behavior Data-Driven automation testing, reducing error rates. Improved data retrieval efficiency through Java code for Elasticsearch mapping. Proficient in deploying resilient Microservices to AWS Cloud for high availability and scalability.

TECHNICAL SKILLS

Programming Languages:	Java, J2EE, SQL, PL/SQL
Java Technologies:	Servlets, JSP, JDBC, JNDI
Frameworks:	MVC, Spring, JPA, Hibernate, JDBC, Kafka, Hadoop, Spring Boot, Scala
Distributed Technologies:	Web Services (SOAP/REST), SOA, RMI, XSLT, Apache, WSDL
Database:	MySQL, MongoDB, Oracle, MS SQL, SQL Server, PostgreSQL
Testing Framework:	Junit, Mockito, TestNG, Log4j, Jasmine
Containerization:	Docker, Kubernetes
Version Control:	GIT, Bitbucket, GitHub, SVN, CVS
IDE/Tools:	Eclipse, Visual Studio, IntelliJ idea, NetBeans, Maven
Server:	JBoss, Apache Tomcat, Web Logic 10, Web Sphere.

CAREER EXPERIENCE

Rocket Dollar – Remote Java Backend Developer

May 2021 - Present

Environment:

Java, Spring Boot, JSON, HTML, CSS, SQL, Servlets, JSP, JDBC, PostgreSQL, Microservices, Spring Framework, Hibernate, Oracle, MVC, Servlets, JSP, Hibernate, Web Logic, CVS, Angular, JavaScript, Typescript, Bootstrap, Spring Cloud, AWS Cloud, Microservices, Hibernate ORM, JPA, RESTful resources, Apache Camel, Node-JS, MongoDB.

Core Responsibilities:

- Designed and implemented end-to-end development cycles for financial applications, ensuring timely, defect-free releases while exceeding client expectations.
- Architected and deployed scalable, full-stack solutions, integrating responsive front-end interfaces using Angular, React, HTML5, CSS3, JavaScript, TypeScript, and Bootstrap with robust back-end systems built on Spring Boot and Hibernate.
- Developed and deployed microservices on AWS Cloud, leveraging Spring Cloud to optimize data processing and achieve seamless scalability.
- Created scalable and secure RESTful APIs for integrating payment gateways, real-time financial data feeds, third-party services, and middleware services, enhancing system performance and reducing data processing errors.
- Leveraged Java technologies, including functional programming features such as lambda expressions, to optimize backend services and achieve up to a 20% reduction in response times.
- Enhanced data access layers by implementing Hibernate ORM mappings with JPA annotations, improving database integration and retrieval efficiency.
- Established secure messaging and routing using Apache Camel and integrated REST services with Node.js, MongoDB, and Express to expand application capabilities.
- Collaborated with cross-functional teams, including business analysts and product managers, to ensure compliance with financial regulations and industry standards for data security.
- Implemented industry-standard security measures, including encryption and authentication protocols, to safeguard sensitive financial data.

- Carried out rigorous debugging and performance tuning using testing frameworks such as JUnit and Mockito, ensuring the reliability and robustness of mission-critical financial applications.
- Supervised the creation of intuitive, user-friendly dashboards and reporting tools, ensuring seamless user experiences.

Southwest Airlines, San Jose, CA
Software Engineer

Oct2019 – Jan 2021

Environment:

SpringMVC, SpringAOP, Dependency Injection, SpringBatch, SpringQuartz Scheduling, SpringBoot, Docker, AWS EC2, AWS Lambda

Core Responsibilities:

- Revitalized Spring MVC to improve module interaction and efficiency, implementing Spring AOP and Dependency Injection.
- Developed and executed Spring Batch jobs to optimize data extraction and database loading, managed by Spring Quartz Scheduling.
- Employed Spring Boot Microservices in Docker containers on AWS EC2 container service via AWS admin console, realizing enhancement in application execution speed through AWS Lambda.
- Implemented Spring IOC for dependency injection, reducing code complexity and designed and integrated business components with Spring AOP and Spring Annotations.
- Leveraged Hibernate as an ORM solution for data mapping from MVC model to Oracle Relational data model, improving data integration.
- Pioneered business logic using Plain Old Java Objects (POJOs) to enhance system stability.

Key Achievements

- Developed and launched a secure online banking platform, improving transaction speed by 30%.
- Contributed to the e-commerce platform's development, boosting system reliability and customer engagement, leading to a 15% revenue increase.
- Enhanced loan management systems for financial clients, driving improved operational efficiency.
- Optimized CI/CD pipelines with Jenkins and Docker, cutting deployment time by 25%.

Projects:

Electronic Badge/Attendance System using Spring technologies

- Developed a RESTful backend for an electronic badge/attendance system focusing on tracking attendance and usage for various functions within an organization, such as dining services, classes, and gym access.
- Designed a UML class diagram based on Domain Driven Design principles and implemented CRUD operations for entities like Location, Account, Badge Scanner, Event, Session, and Member.
- Advanced features included generating Excel reports and an email service for account balance notifications.
- Emphasized professional communication through reports and email notifications for account balances.
- Technologies Used: Spring MVC 5.3, Spring Boot 3.2, Spring Data JPA 3.1, Spring Cloud Services 2024.0.

Real-time Stock Market Data Processing and Visualization Pipeline

- Developed a high-performance data pipeline using Apache Kafka and Spark Streaming to ingest and process real-time stock market data from Alpha Vantage. Analyzed data with Spark SQL, enabling complex queries for in-depth insights.
- Designed a data pipeline using Apache Kafka and Spark Streaming for real-time stock market data.
- Stored analyzed data in Hive for durable and scalable storage, supporting historical data queries. Used Tableau for dynamic charting, transforming analytical results into visual formats for swift and informed decision-making by stakeholders.
- Technologies Used: Apache Kafka 3.4, Spark Streaming 3.4, Spark SQL 3.4, Hive 3.2, Tableau 2024.1.

EDUCATION

University of Abu Dhabi, UAE || Bachelor of Science
 Eritrean Institute of Technology, Eritrea || Bachelor in Computer Engineering
